How to read this guide

- Every screenshot has **red numbered markers**. Under it, a list with the same red numbers tells you what each marked thing is and does.
- **Grey numbered lists** are step-by-step instructions: do them in order.
- Boxes: **green "Rookie tip"** for beginner advice, **blue "Good to know"** for details, **yellow "Heads up"** for limits and permissions.
- The screenshots come from the built-in **live demo** company (chapter 2), so names and numbers will differ from yours, and a purple "Live demo" banner shows at the top of them. **Your own account starts completely empty** (chapter 3) and has no banner.

CHAPTER 1

CRM in plain English

A CRM (Customer Relationship Management) system is a shared address book and to-do list for everyone who talks to customers. It remembers every person, every conversation and every sale in progress, so nothing falls through the cracks.

The words you'll see everywhere

Word	What it means	Example
Lead	Someone who *might* become a customer but hasn't been checked out yet.	A person who filled in your website form.
Contact	A real person you do business with. Leads become contacts once they're qualified.	Priya Shah, VP Operations at Acme.
Company	The organization a contact works for.	Acme Industries.
Deal	A sale you're trying to win, with a value in money.	"Acme platform rollout — $48,000".
Pipeline	The ordered steps a deal goes through until it's won or lost.	Qualification → Discovery → Proposal → Negotiation → Contract Sent.
Stage	One step in the pipeline. Each has a **win probability** (how likely deals at that step are to close).	Proposal = 50%.
Weighted value	Deal value × win probability. A realistic forecast.	$48,000 at 50% = $24,000.
Activity	Something you did with a customer: a call, email, meeting or note.	"Discovery call, 30 min, connected".
Task	Something you still need to do, with a due date.	"Send proposal by Friday".
Ticket	A customer's support request, with a deadline to resolve it (SLA).	"#12 Cannot export CSV — urgent".
Quote	A priced offer sent to a customer, built from your products.	"Q-0001 — $52,800".
Campaign	A marketing effort that brings in leads (webinar, ads, event).	"SaaS Summit booth".
Owner	The team member responsible for a record.	Sam owns 10 deals.
Quota	A salesperson's monthly revenue target.	$25,000 per month.

How it all connects

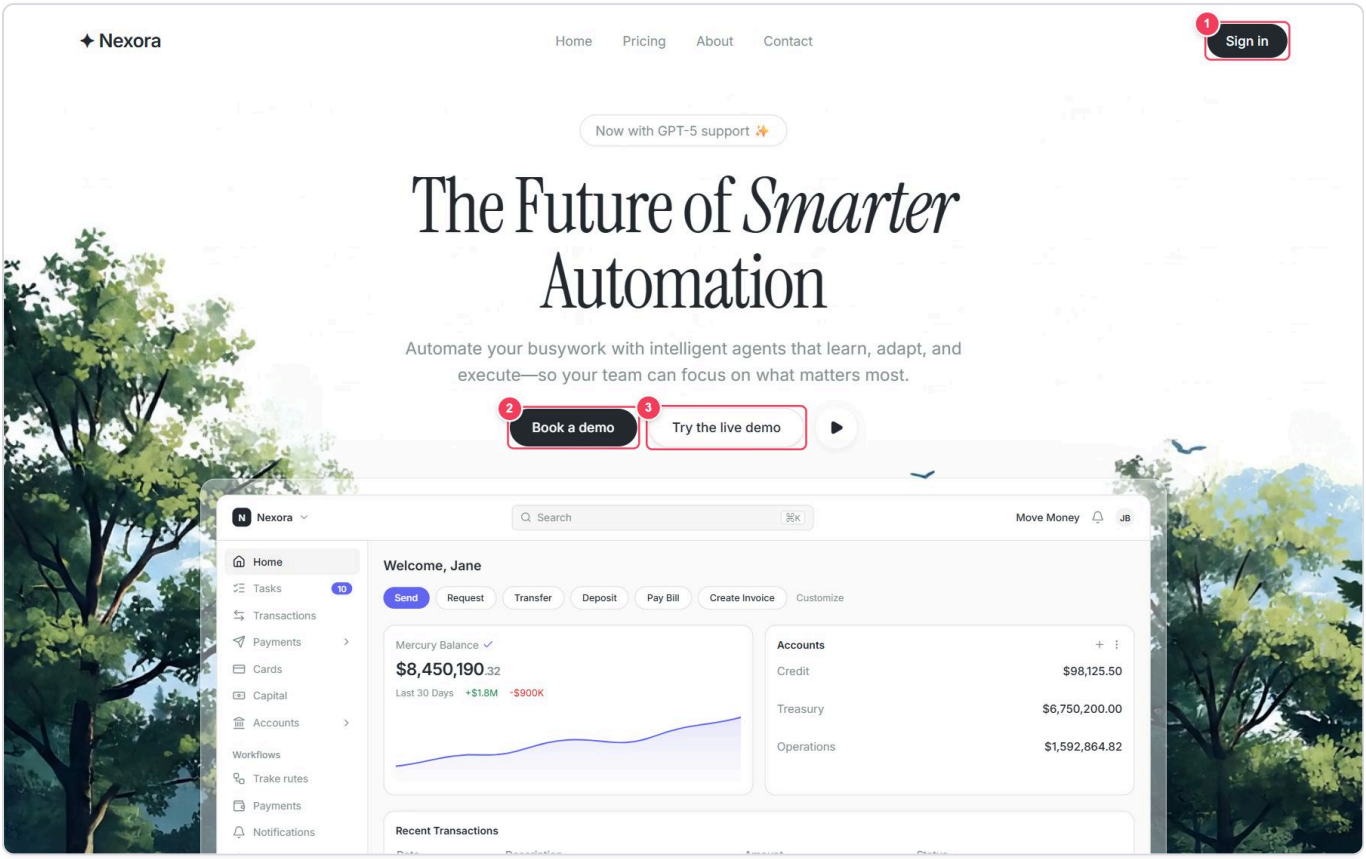

Lead → (you qualify and convert it) → **Contact** + **Company** + **Deal** → (you move the deal through **stages**, logging **activities** and doing **tasks**, maybe sending a **quote**) → **Won** 🎉 → the contact becomes a **Customer** → if they need help, they open a **Ticket**.

> **Rookie tip**
> You don't have to use every feature on day one. Start with Contacts, Deals and Tasks. Add the rest once those feel natural.

CHAPTER 2

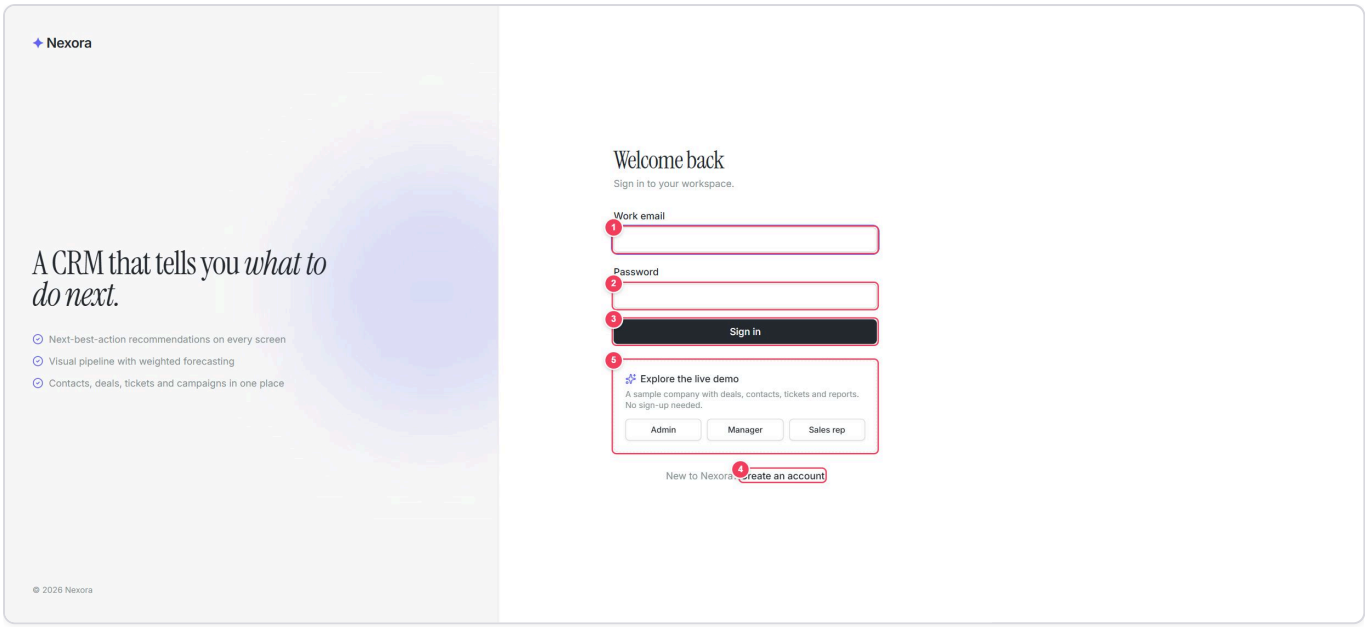

Signing up, signing in and the live demo

The home page is where new people create an account, existing users sign in, and anyone can try a ready-made demo company without signing up.

The Nexora home page.

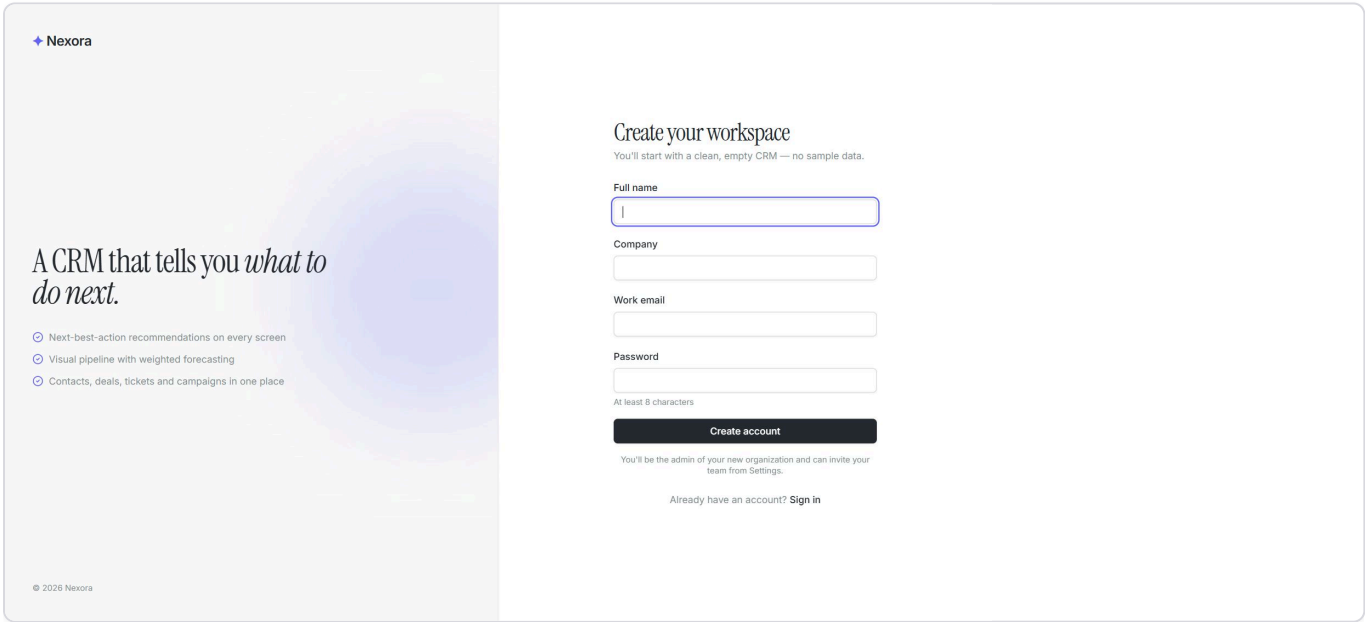

1. **Sign in**: for people who already have an account.
2. **Book a demo**: opens the sign-up form to create a new account and workspace.
3. **Try the live demo**: one click opens a sample company full of data, signed in as its admin. No email or password needed (see “Try the live demo” below).

The sign-in page.

1. **Work email** you signed up with.
2. **Password**.
3. **Sign in** (or press `Enter`).
4. **Create an account** if you don’t have one yet.
5. **Explore the live demo**: open the demo company as an **Admin**, a **Manager** or a **Sales rep**, to see how each role’s view differs (chapter 24).

Create an account

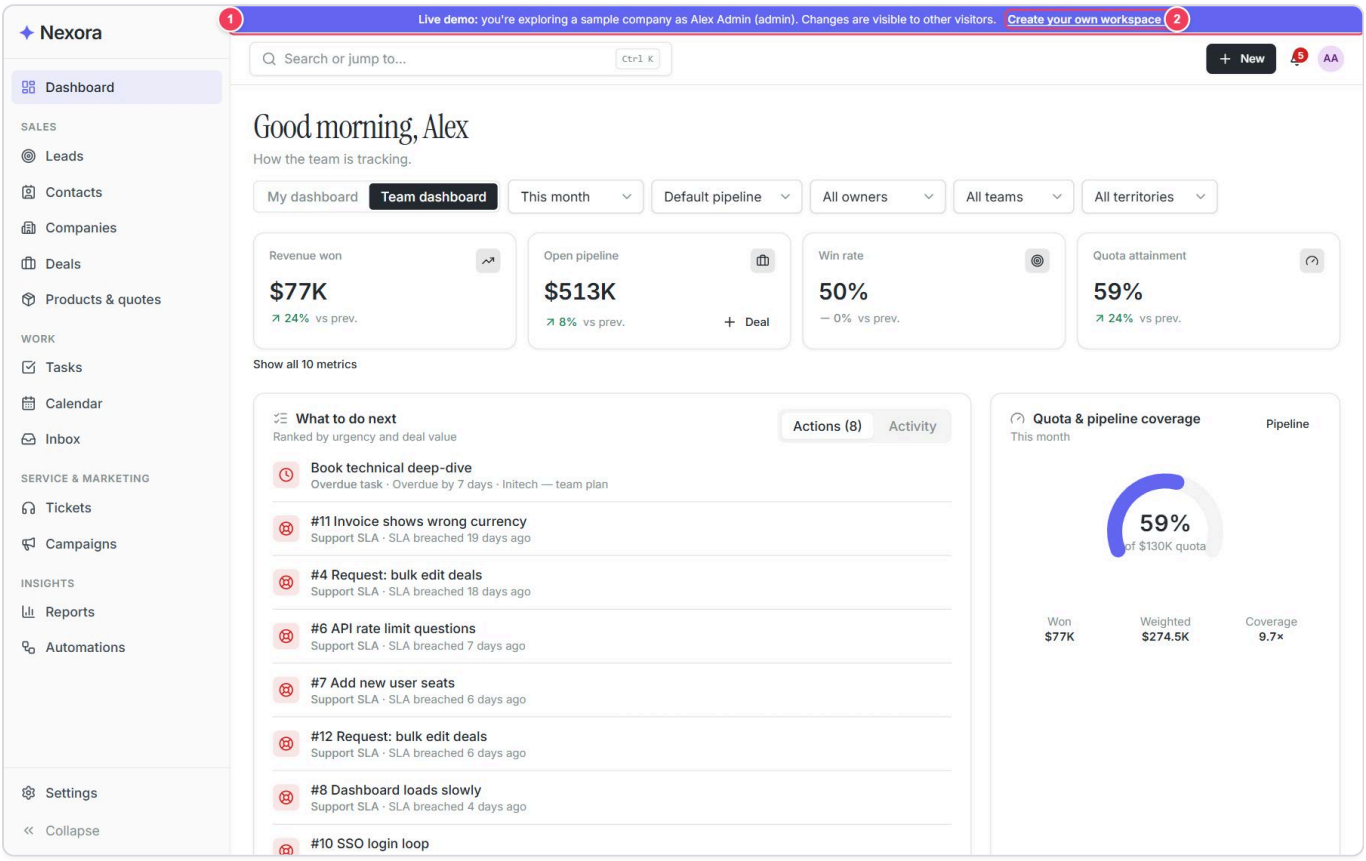

1. Fill in your full name, company name, work email and a password (at least 8 characters).
2. Click **Create account**. You’re signed in straight away.
3. You become the **Admin** (the boss account) of a brand-new, empty workspace for your company.

> **Good to know**
> If a colleague already uses Nexora, don't sign up separately: ask your admin to add you (chapter 23). Signing up always creates a *new, separate* company workspace.

Try the live demo (no sign-up)

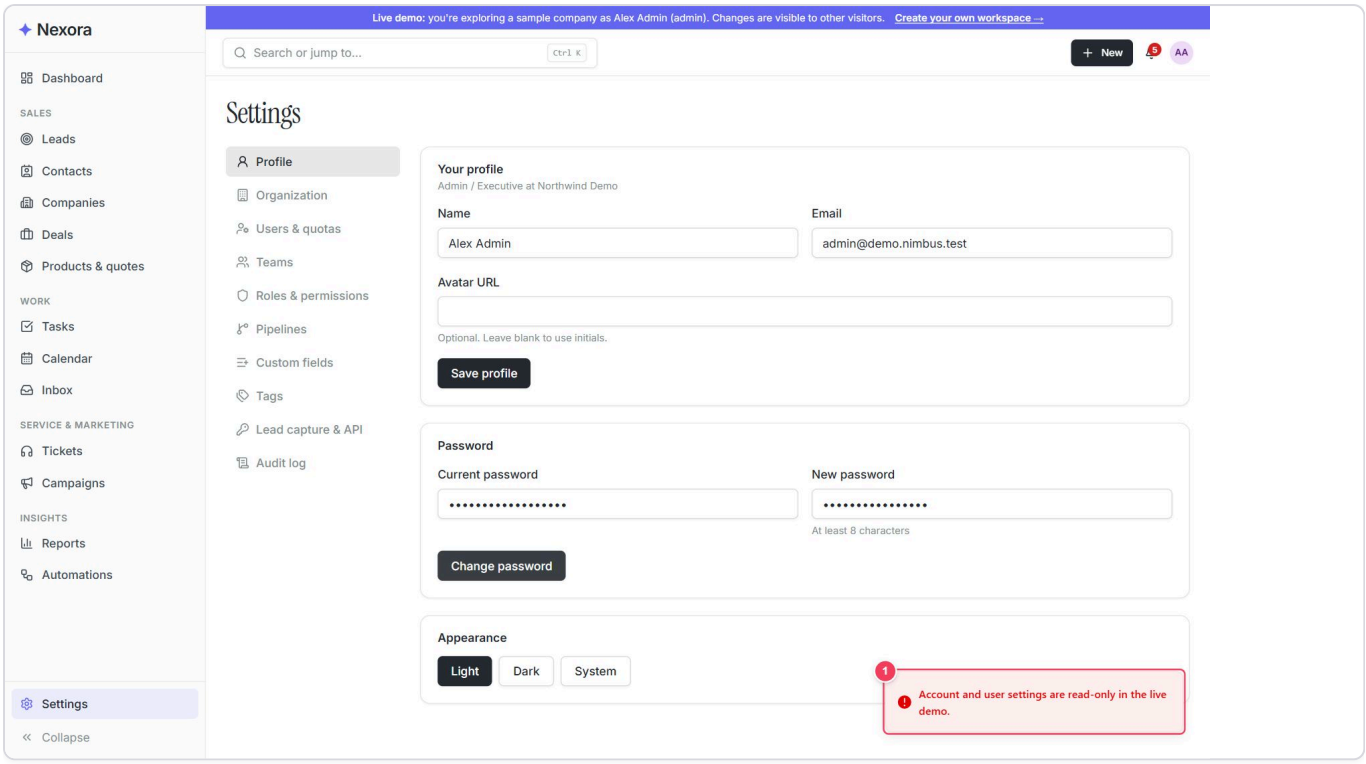

The live demo is a made-up company called **Northwind Demo**, with 20 companies, 60 contacts, 40 deals, leads, tickets, quotes, campaigns, reports and automations already filled in. It's the quickest way to see what Nexora does. Every screenshot in this guide comes from it.

1. On the home page click **Try the live demo**, or on the sign-in page pick **Admin**, **Manager** or **Sales rep**.
2. You land on the demo dashboard straight away, signed in as that person.
3. Click around freely: open deals, drag cards, log calls, run reports.

Inside the demo, a purple banner is always shown at the top.

1. **Live demo banner**: who you are signed in as, and a reminder that this is shared sample data. Other visitors can see what you change.
2. **Create your own workspace →**: signs you out of the demo and opens the sign-up form for your own, empty company.

Account settings are locked in the demo.

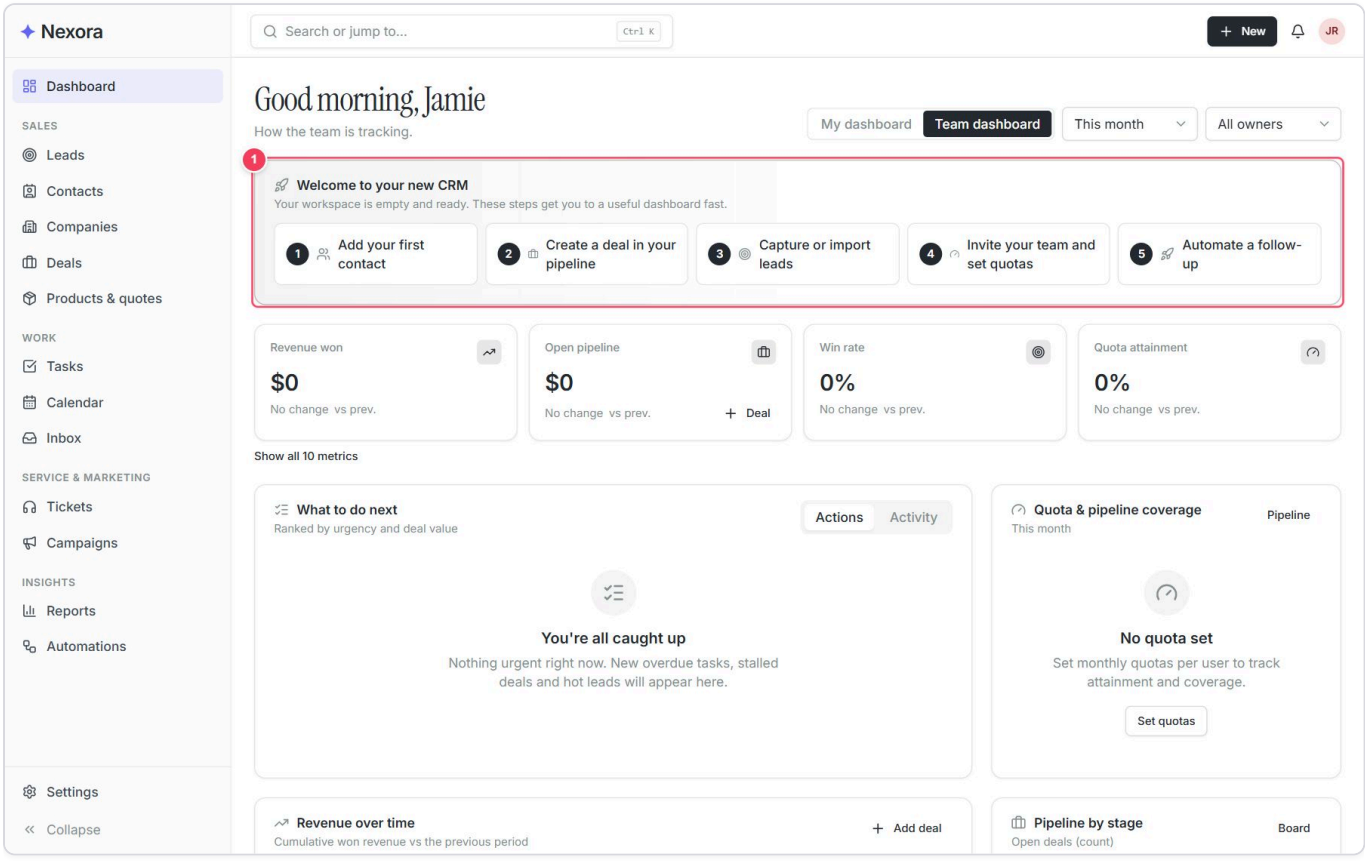

1. Because many visitors share the demo, **profile, password and user settings are read-only** there, so nobody can lock others out. You'll see this message if you try.

> **Rookie tip**
>
> Use the demo to practise. When you're ready for real work, click **Create your own workspace**. Your own company starts completely empty and is private to your team. The purple banner never appears there.

CHAPTER 3

Your first five minutes

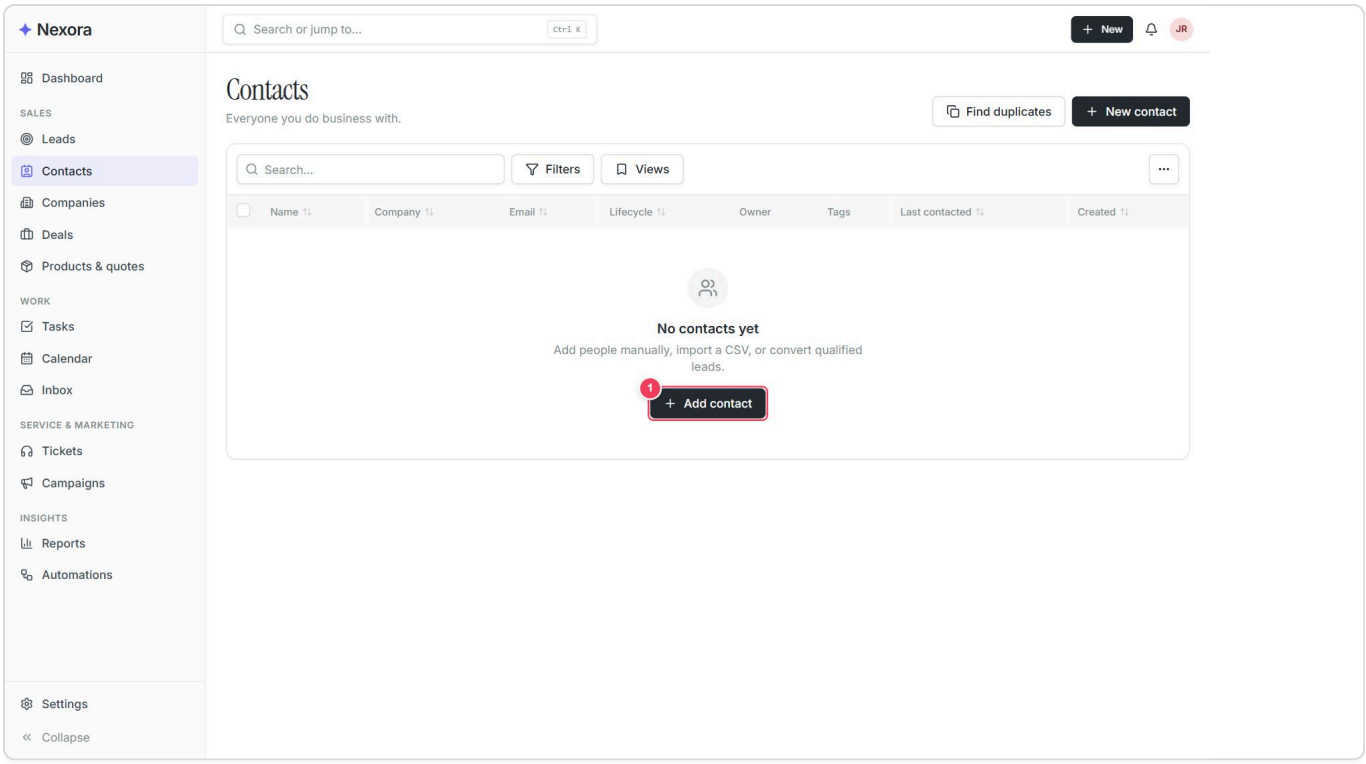

A brand-new account is completely empty: no sample contacts, deals or numbers. Nexora shows a checklist to get you going.

What a new account's dashboard looks like.

1. **Welcome to your new CRM**: five shortcut buttons. Click any of them to jump straight to that step: add a contact, create a deal, capture leads, invite your team, automate a follow-up. The checklist disappears once you add your first contact, deal or lead.

All numbers show **$0** and **0%**, and charts show friendly "nothing yet" messages. That's normal and fills in as you work.

An empty list always tells you how to add your first record.

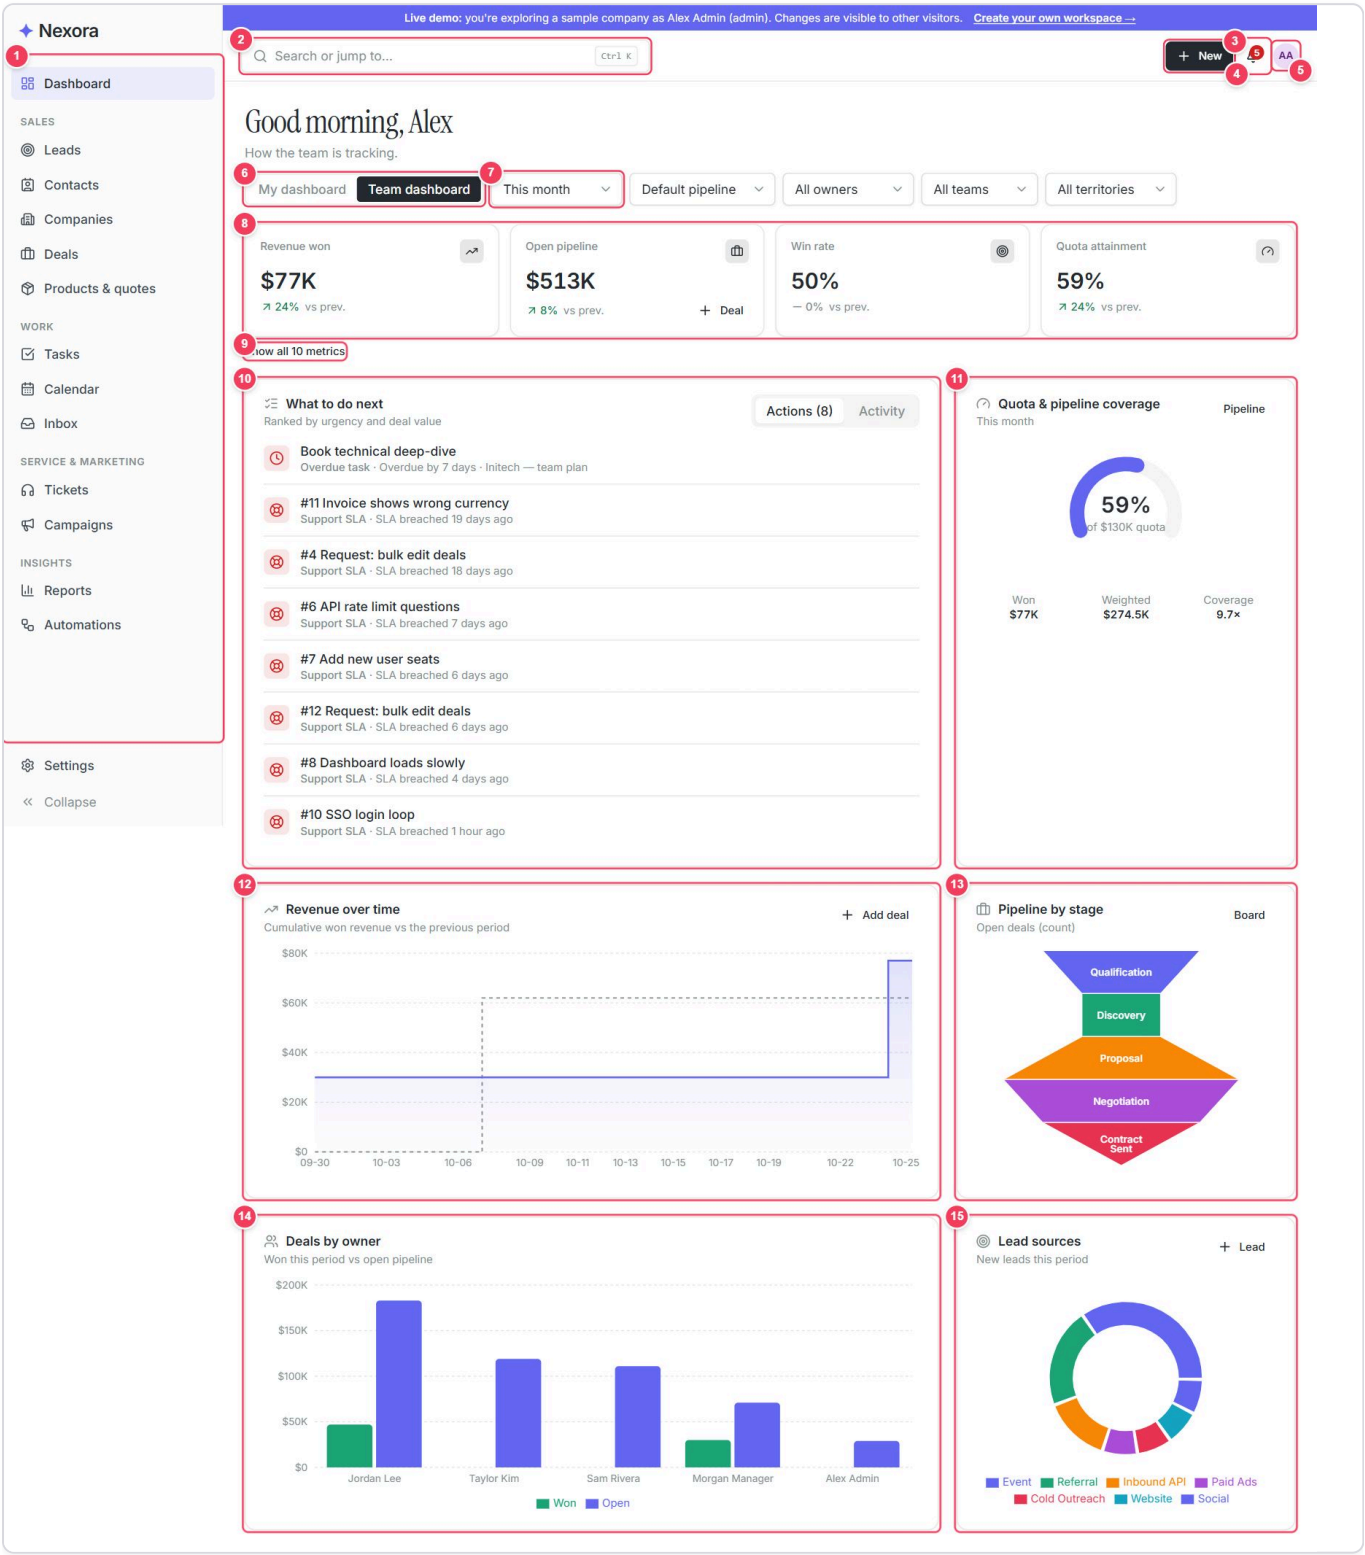

1 **Add contact**: creates your first contact. Every empty list has a similar button.

> **Rookie tip**
>
> The only thing a new account contains is one empty pipeline called *Sales Pipeline* with five stages, because deals need somewhere to live. You can rename or change the stages later (chapter 23).

CHAPTER 4

The screen layout

Every page has the same frame: a menu on the left, a toolbar along the top, and the page content in the middle.

1. **Sidebar menu**: every section of the CRM, grouped into Sales, Work, Service & marketing and Insights. The highlighted item is the page you're on. **Settings** and **Collapse** (shrinks the menu to icons) sit at the bottom.
2. **Search or jump to…**: finds any record or page (chapter 5).

3. **+ New**: create any kind of record from anywhere.
4. **Bell**: your notifications. The red number is how many are unread.
5. **Your avatar**: profile, settings, light/dark theme and sign out.
6. **–15** are parts of the dashboard, explained in chapter 6.

The sidebar sections

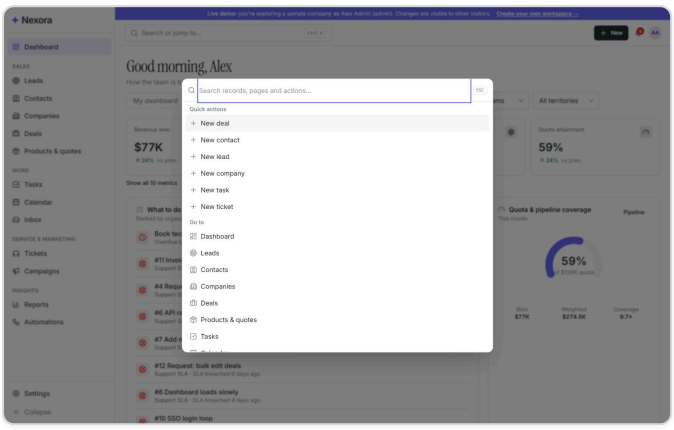

Group	Pages
Sales	**Leads** (possible customers), **Contacts** (people), **Companies**, **Deals** (sales in progress), **Products & quotes**.
Work	**Tasks** (your to-dos), **Calendar**, **Inbox** (emails you sent).
Service & marketing	**Tickets** (customer support), **Campaigns** (marketing).
Insights	**Reports**, **Automations** (rules that do work for you).

CHAPTER 5

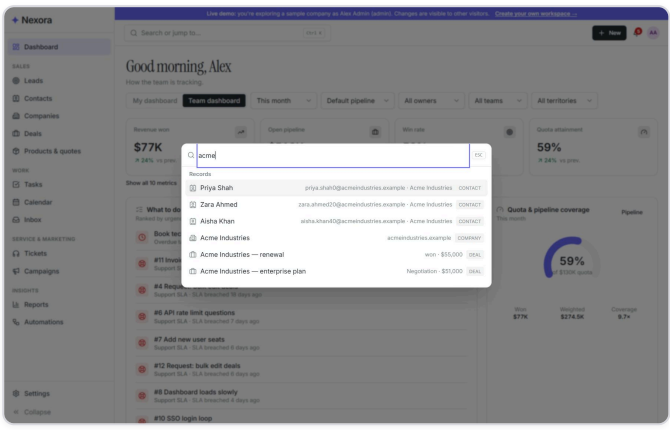

Search, New, notifications and your menu

Search everything (Ctrl + K)

Click **Search or jump to…** or press `Ctrl` + `K` (`⌘` + `K` on a Mac).

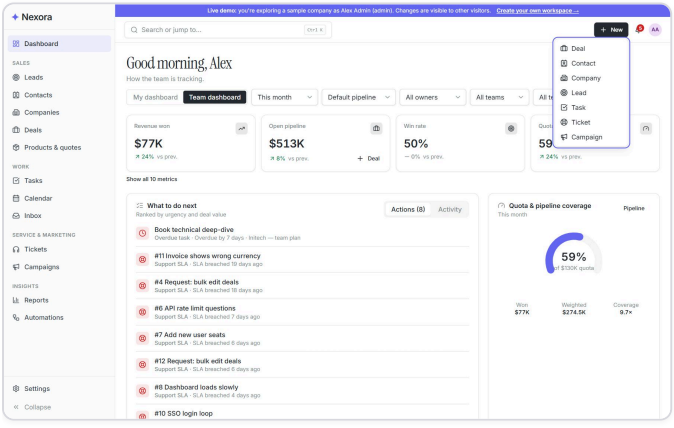

Before typing: quick actions and every page.

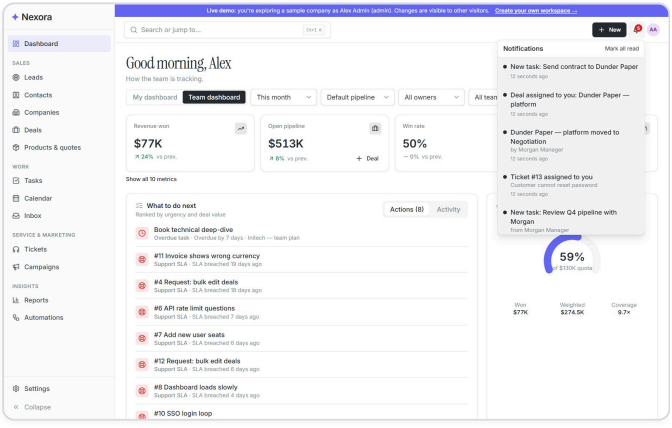

After typing “acme”: matching contacts, companies, deals…

1. Type at least two letters of a name, email, company, deal title or ticket number.
2. Use the `↑` `↓` arrow keys to pick a result and `Enter` to open it, or click it.
3. With nothing typed, pick a **Quick action** (New deal, New contact…) or a page under **Go to**.
4. Press `Esc` to close.

Create anything: + New

The + New menu.

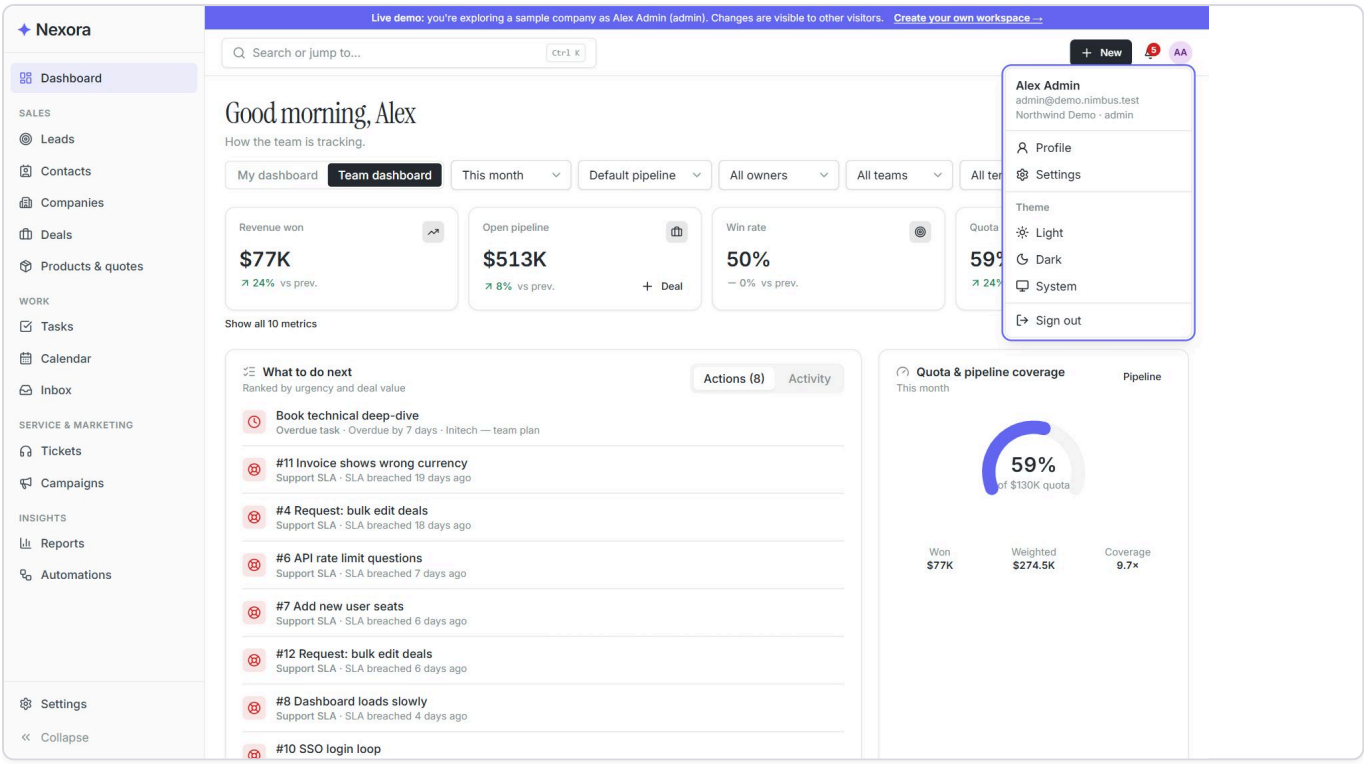

The notifications panel.

+ New lets you add a Deal, Contact, Company, Lead, Task, Ticket or Campaign from any page. After you save, Nexora opens the record you just made.

Notifications (the bell)

You’re told when someone assigns you a record or task, moves or closes your deal, when a task reminder is due, when a support ticket is close to or past its deadline, and when an automation wants your attention. Unread items have a blue dot. Click one to open it, or click **Mark all read**. The list refreshes every 30 seconds.

Your account menu

Click your avatar (top right) to see your name, company and role, open **Profile** or **Settings**, switch the theme (**Light**, **Dark** or **System**, which follows your computer) and **Sign out**.

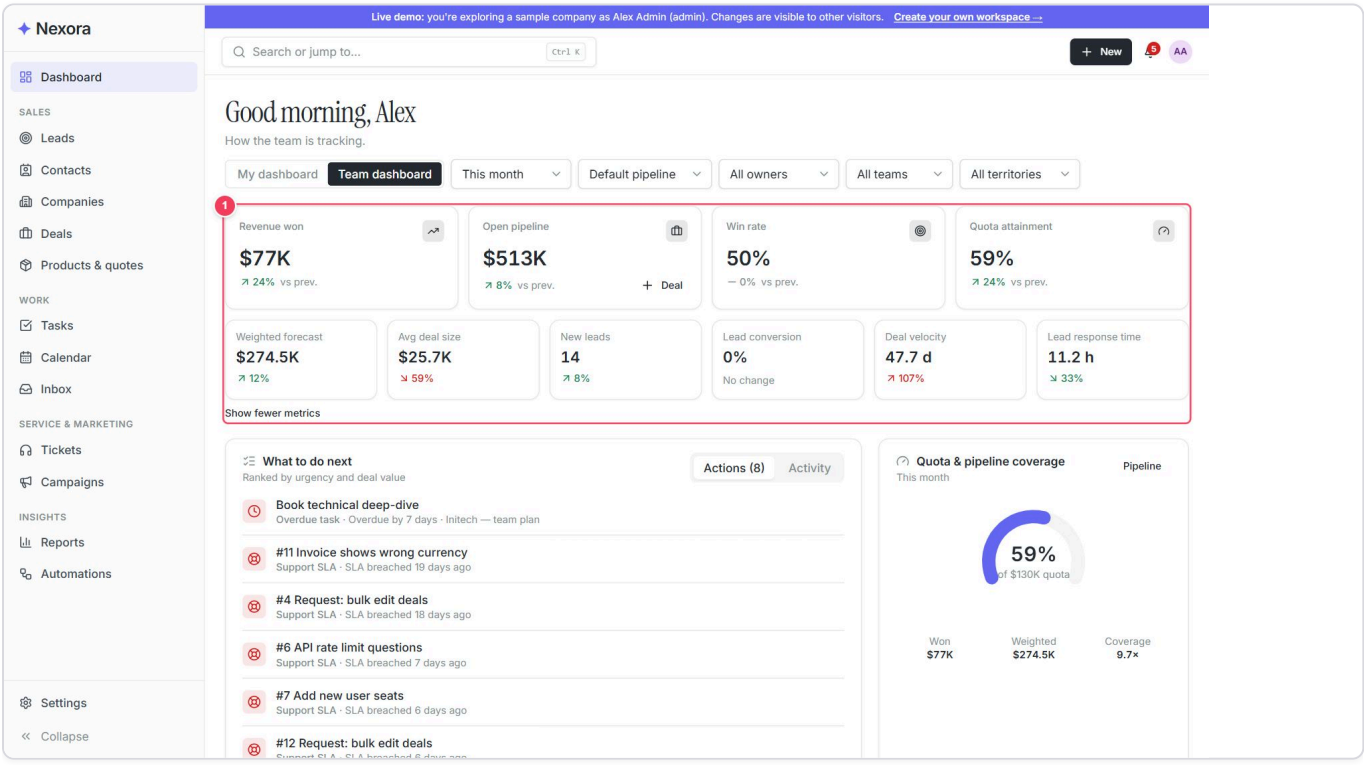

CHAPTER 6

The dashboard

Your home page answers two questions: *how are we doing?* and *what should I do next?* Look back at the big screenshot in chapter 4; the numbers below refer to it.

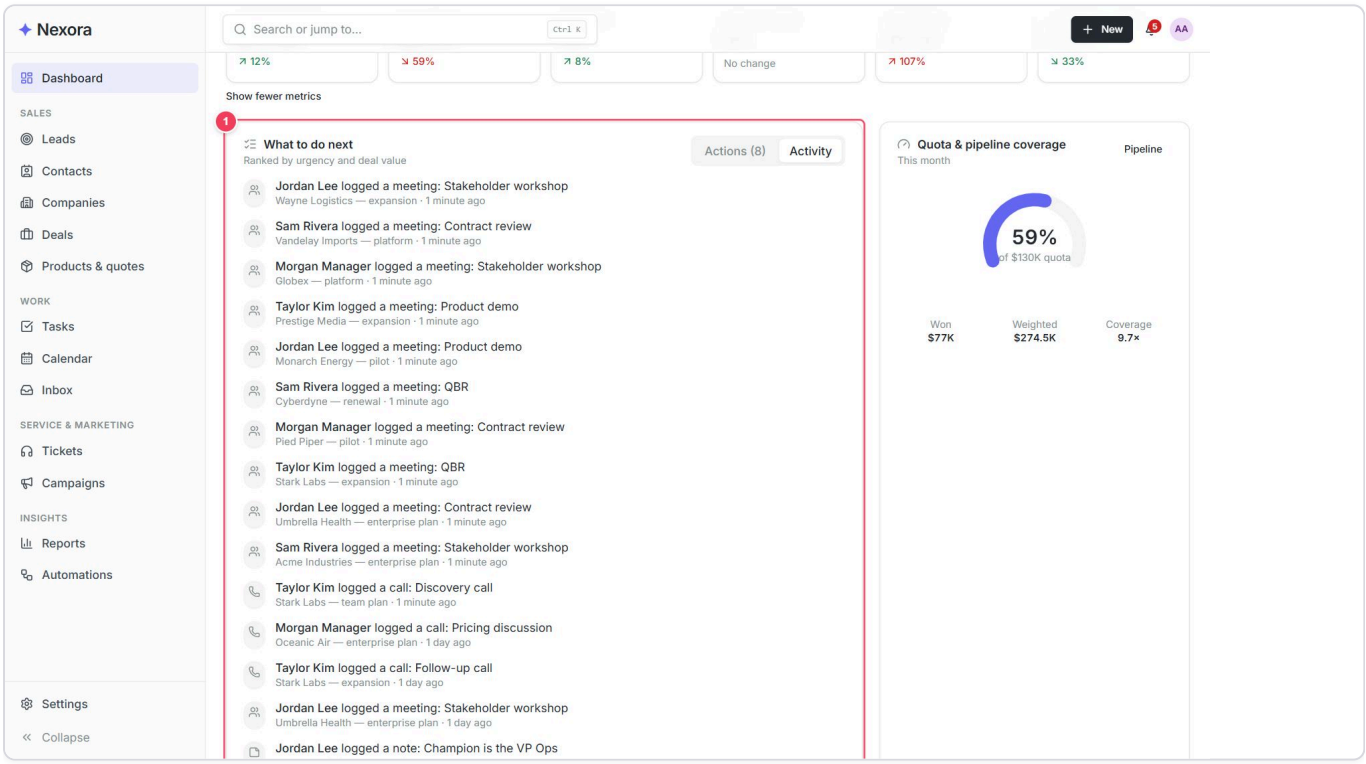

6. **My dashboard / Team dashboard**. *My* shows only your own work. *Team* shows your team (managers) or the whole company (admins). Sales reps only have *My*.
7. **Date range**: This month, Last 30 days, This quarter, This year. Next to it (team view) you can also filter by **pipeline**, **owner**, **team** and **territory**.
8. **Key numbers**: revenue won, open pipeline, win rate and quota attainment. The small arrow shows the change against the previous period: green is better, red is worse.
9. **Show all 10 metrics**: reveals six more numbers (below).
10. **What to do next**: your most urgent work, ranked for you. The **Activity** tab shows what the team did recently.
11. **Quota & pipeline coverage**: how much of the target is met, and whether there are enough deals in progress to hit it.
12. **Revenue over time**: running total of money won this period (solid) vs last period (dashed).
13. **Pipeline by stage**: how many open deals sit in each stage (a funnel).
14. **Deals by owner**: each person's won (green) and open (blue) deal value.
15. **Lead sources**: where this period's new leads came from.

All 10 numbers explained

Number	What it tells you
Revenue won	Money from deals marked *Won* in the period.
Open pipeline	Total value of deals still in progress.
Win rate	Of the deals closed in the period, the share that were won.
Quota attainment	Revenue won as a % of the target (monthly quotas × months).
Weighted forecast	Realistic expected revenue: each open deal's value × its chance of winning.
Avg deal size	Average value of deals won.
New leads	How many leads arrived in the period.
Lead conversion	Share of those leads that became contacts/deals.
Deal velocity	Average days from creating a deal to winning it (lower is better).
Lead response time	Average time before someone first contacted a new lead (lower is better).

"What to do next" in detail

The Activity tab: recent calls, emails, meetings and notes.

Label	Why it appears
Support SLA	A support ticket has passed, or is within 4 hours of, its deadline.
Overdue task	A task's due date has passed.
Closing soon	A deal is expected to close within 7 days.
Stalled deal	Nobody has touched a deal for 14 days or more.
At risk	A deal shows two or more warning signs (chapter 14).
Lead follow-up	A new lead has waited over an hour for a first response.

Hover over an item to reveal shortcuts: 📞 **Log a call** or ☑ **Create follow-up task**.

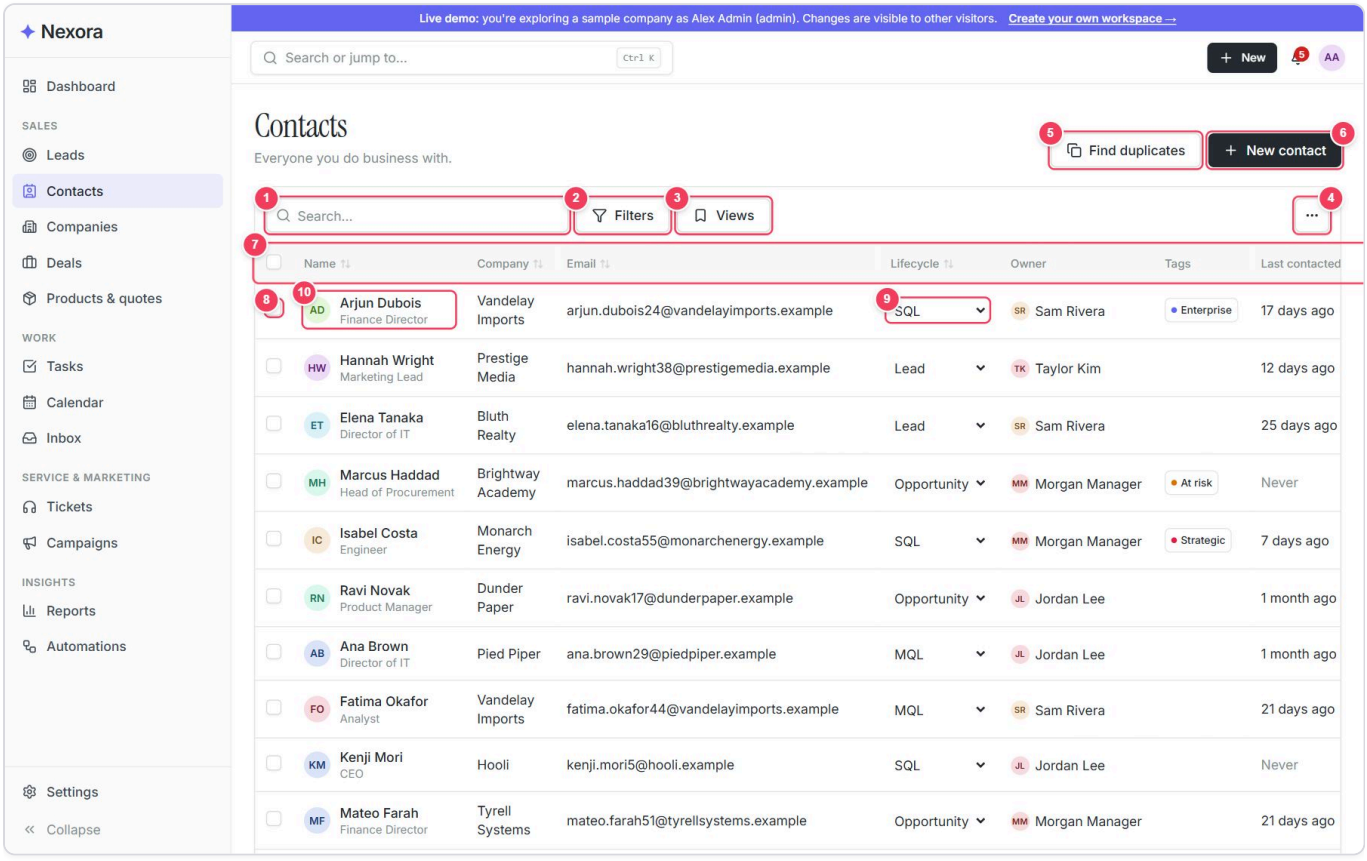

> **Rookie tip**
> Start every morning by working down “What to do next” from the top. It is already sorted by urgency and deal size.

> **Heads up**
> The quota gauge only works once an admin sets monthly quotas for people (chapter 23). Coverage below 3× shows a warning: you probably need more deals to hit target.

CHAPTER 7

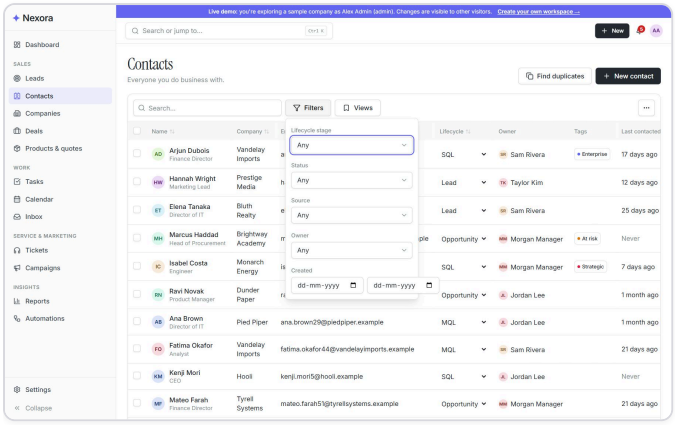

Lists: search, filter, sort and bulk actions

Leads, Contacts, Companies, Deals (list view), Tickets and Products all use the same kind of table. Learn it once and you know them all.

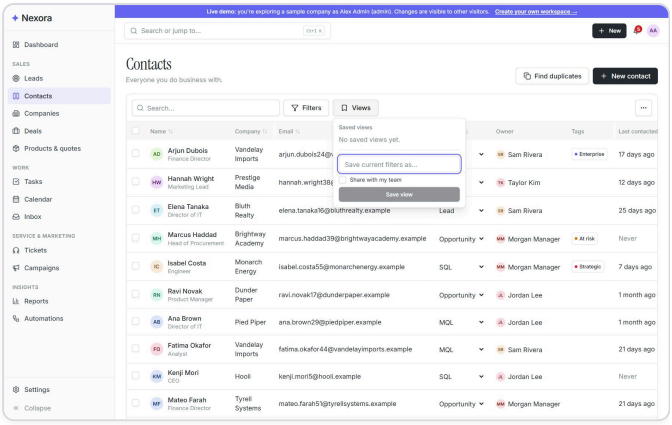

1. **Search**: type part of a name, email, phone or company. Results update as you type.
2. **Filters**: narrow the list (by stage, owner, source, dates...).
3. **Views**: save the current search and filters to reuse later.
4. ··· **More**: *Export CSV* (download to Excel) and *Import CSV* (upload many records at once).
5. **Find duplicates** (contacts only, chapter 8).
6. **New contact**: add one record by hand.
7. **Column headers**: click one with ⇅ arrows to sort; click again to reverse.
8. **Checkbox**: select rows for bulk actions. The box in the header selects the whole page.
9. **Inline edit**: some columns are drop-downs. Change the value right in the table; it saves instantly.
10. **Name**: click any row (or the name) to open the record.

The bottom of the list shows "1–25 of 60" and arrows to page through 25 records at a time.

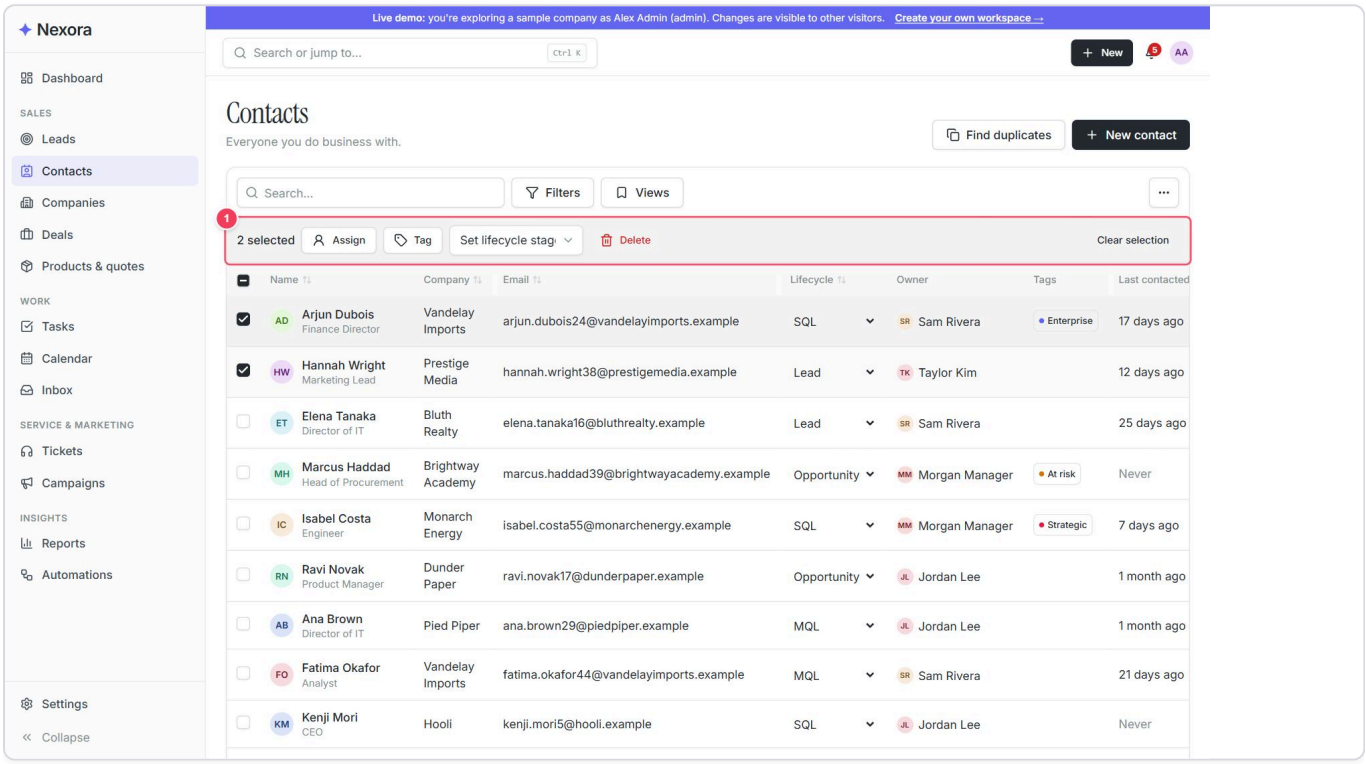

Filters. “Me” and “Unassigned” are handy owner choices.

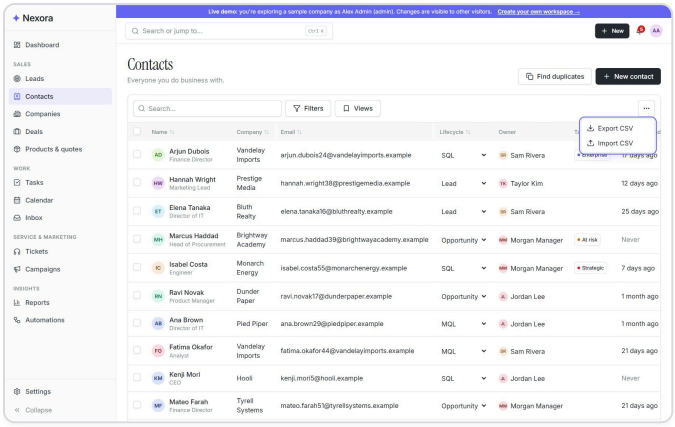

Saved views. Tick “Share with my team” to share.

Bulk actions

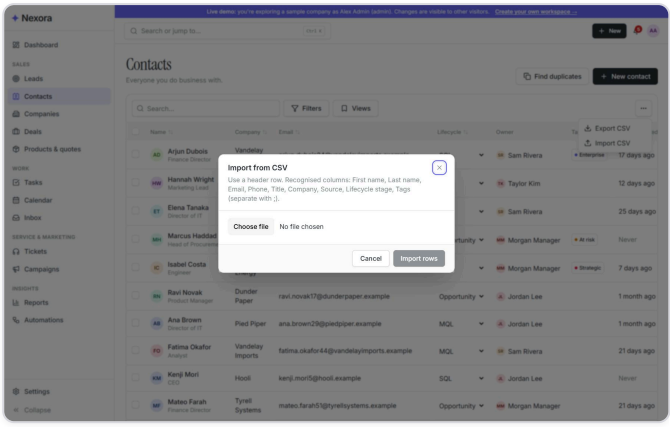

1. **Bulk bar**: appears when rows are ticked. **Assign** them to someone, add a **Tag**, change a status/stage for all of them, or **Delete**. **Clear selection** unticks everything.

Import and export CSV

The ··· menu.

Import from CSV.

1. **Export:** ··· → **Export CSV** downloads exactly what you see (search and filters included). Opens in Excel or Google Sheets.
2. **Import:** ··· → **Import CSV** → choose a file whose first row has column names (e.g. First name, Last name, Email, Company).
3. Check the preview of the first 5 rows, then click **Import** (up to 5,000 rows at a time).
4. Nexora reports how many were imported and lists any skipped rows with the reason (e.g. “Email: Enter a valid email”).

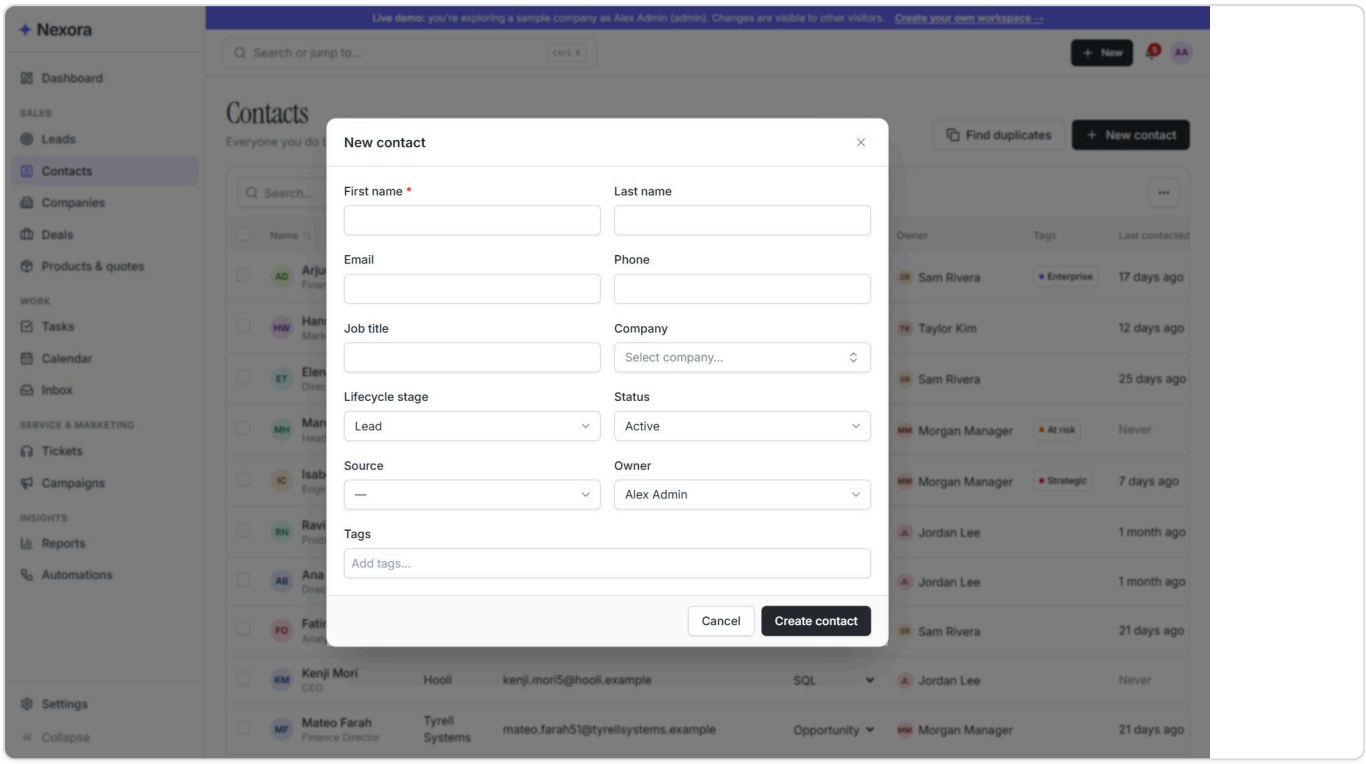

> **Heads up**
> By default only managers and admins can import, delete in bulk and assign records to other people. Everyone can export.

CHAPTER 8

Contacts

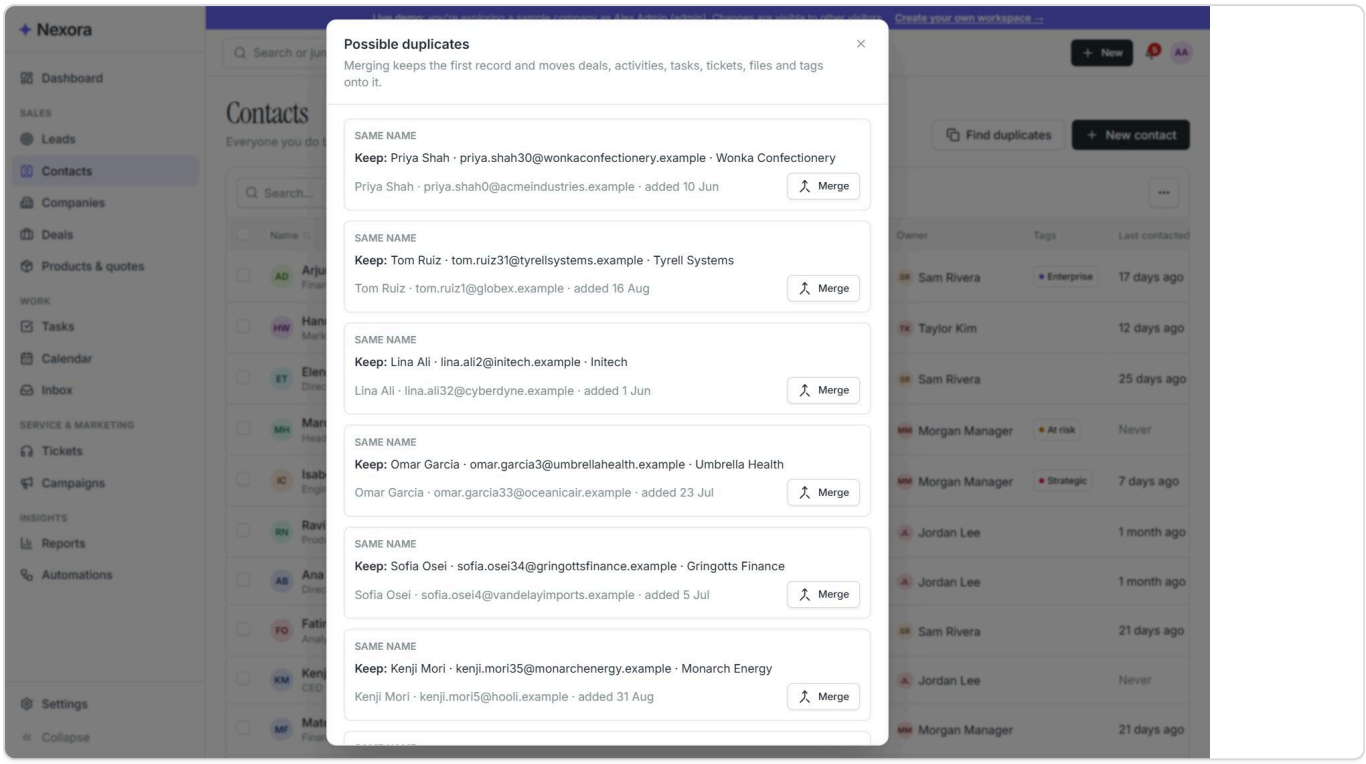

Contacts are the people you do business with. The list works as described in chapter 7.

Add a contact

1. Click **New contact** (or + New → Contact).
2. Only **First name** is required (marked with *). Add last name, email, phone and job title.
3. **Company**: start typing and pick from the list. Add the company first if it's not there.
4. **Lifecycle stage** says how far along they are: Subscriber → Lead → MQL → SQL → Opportunity → **Customer** → Evangelist. Winning a deal moves the contact to Customer automatically.
5. Set the **owner** (you, by default), the **source** they came from, and **tags** (type a word, press `Enter`).
6. Click **Create contact**. Its 360° page opens.

Find and merge duplicates

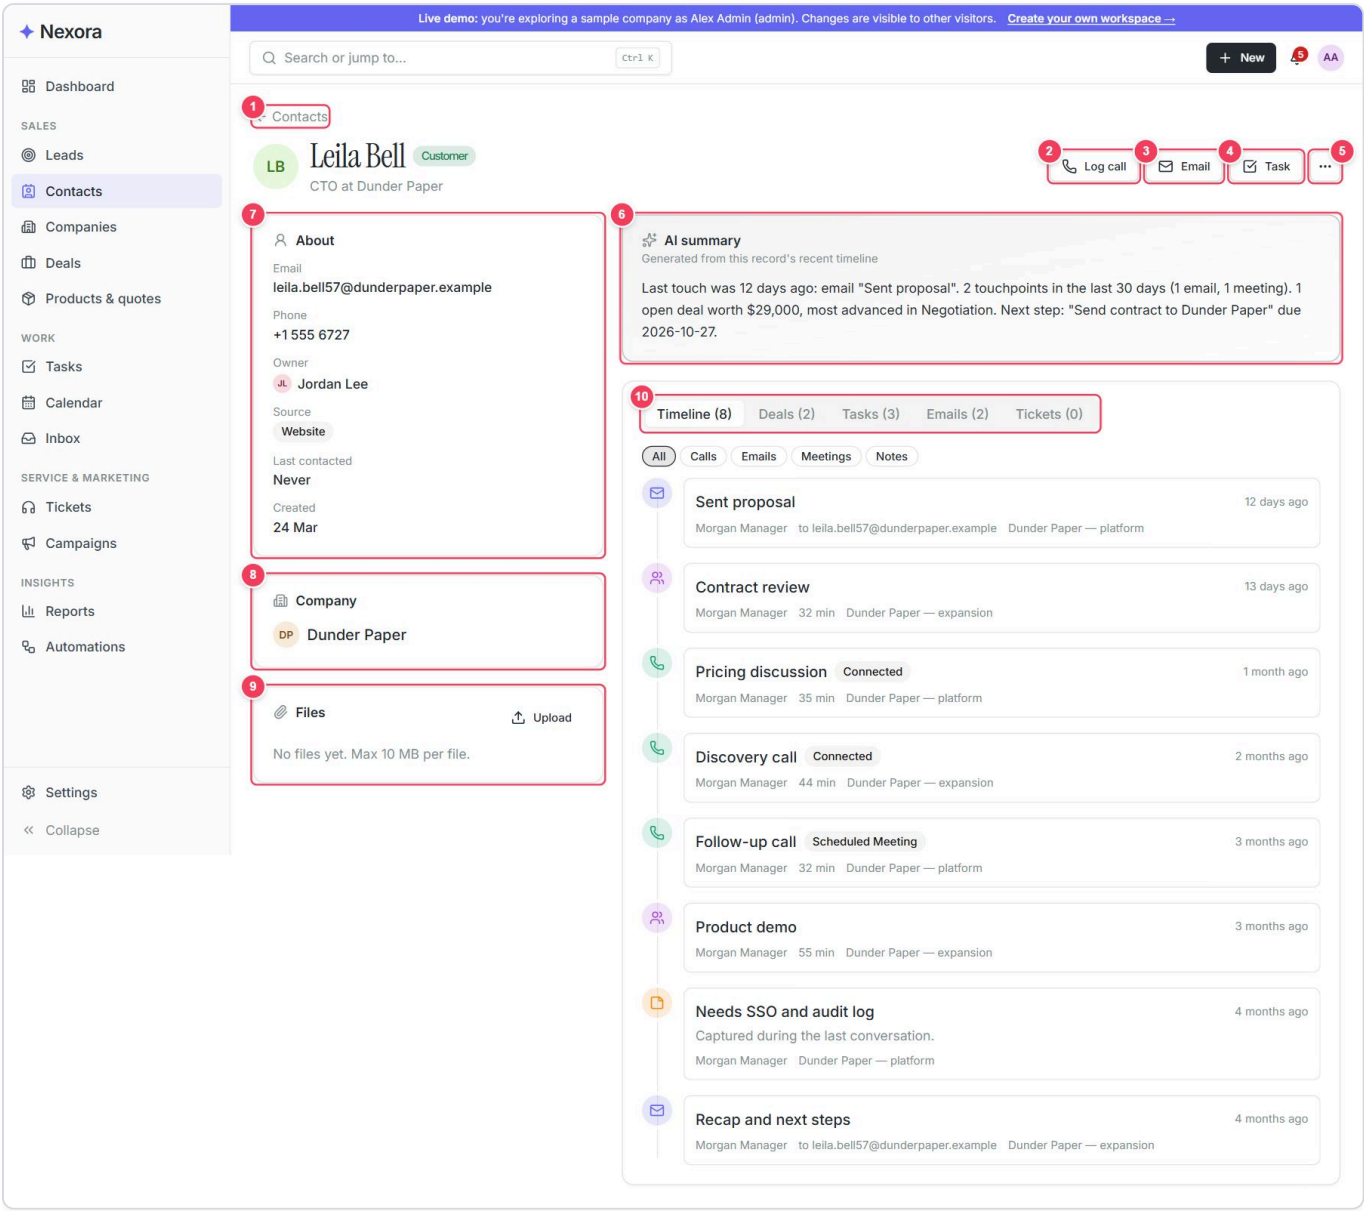

1. On Contacts, click **Find duplicates**. Nexora groups people with the **same email** or the **same full name**.
2. “Keep” shows the oldest record. Click **Merge** beside a duplicate.
3. Everything attached to the duplicate (deals, activities, tasks, tickets, files, tags) moves to the kept contact, empty fields are filled in, and the duplicate is removed.

> **Heads up**
> Merging happens immediately, with no “are you sure?” step. Double-check the two records first.

CHAPTER 9

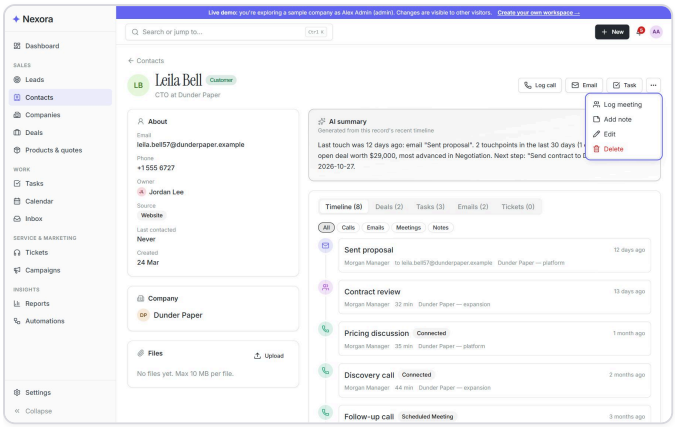

A contact's 360° page

Everything about one person on a single screen: details, company, deals, conversations, tasks, support tickets and files.

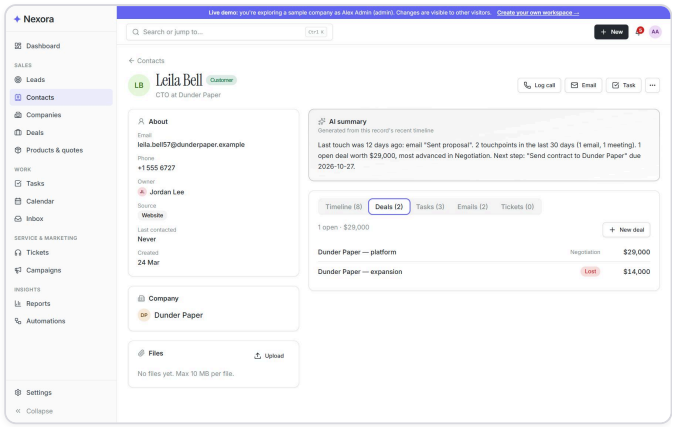

1. ← **Contacts**: back to the list.
2. **Log call**: record a phone call (chapter 10).
3. **Email**: write an email to this person.
4. **Task**: create a to-do linked to this person.
5. ···: log a meeting, add a note, edit or delete.
6. **AI summary**: a plain-English recap: when you last spoke, how often, open deals, open tickets and the next planned step.
7. **About**: email (click to write), phone (click to call), owner, source, last contacted, tags and custom fields.
8. **Company**: click to open the company page.

9. **Files**: **Upload** documents (up to 10 MB each); click a name to download.
10. **Tabs**: Timeline (all activity), Deals, Tasks, Emails and Tickets. Numbers show how many.

The ⋯ menu on a record.

The Deals tab: **New deal** creates one already linked to this person.

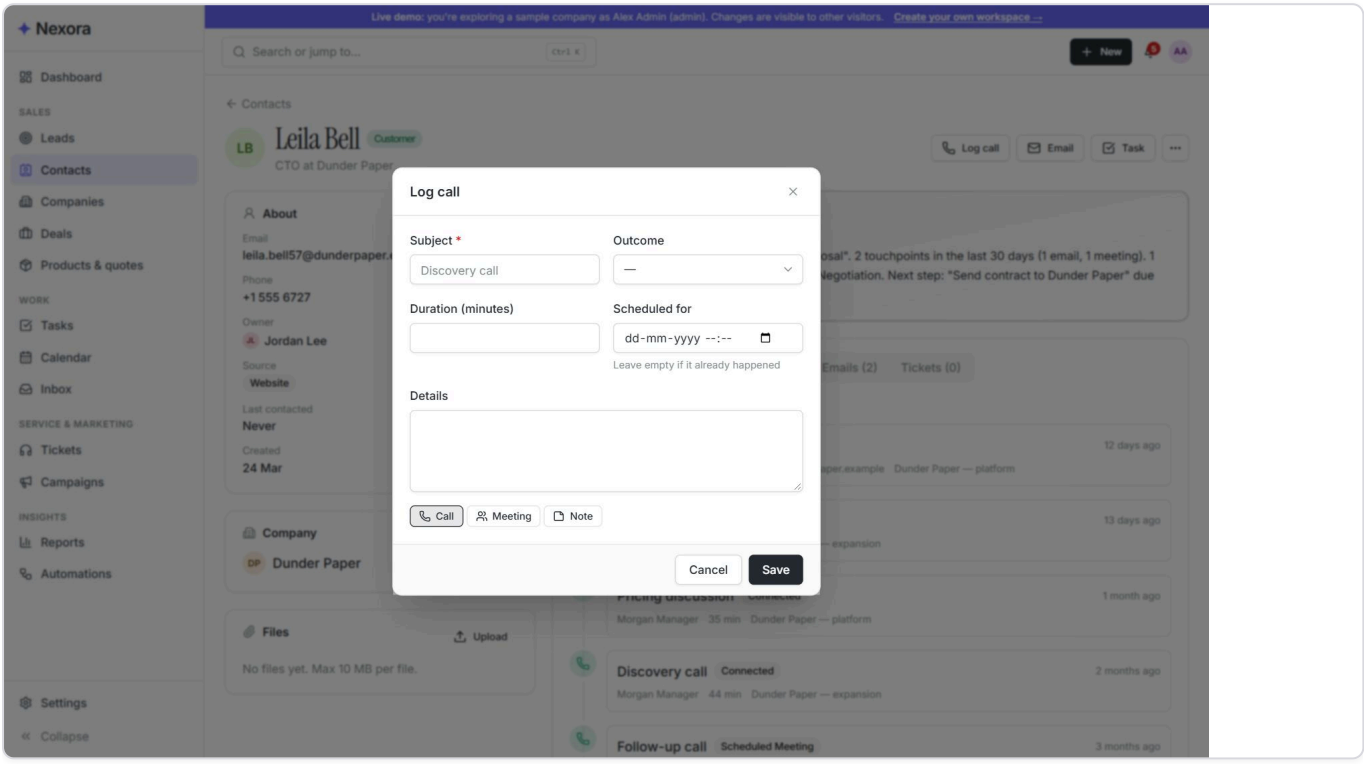

> **Rookie tip**
> Before calling anyone, read their AI summary and timeline. You'll know what was said last time in ten seconds.

CHAPTER 10

Logging calls, emails, meetings, notes and tasks

These buttons appear on every contact, company, lead, deal and ticket page. Whatever you log is saved on that record's timeline.

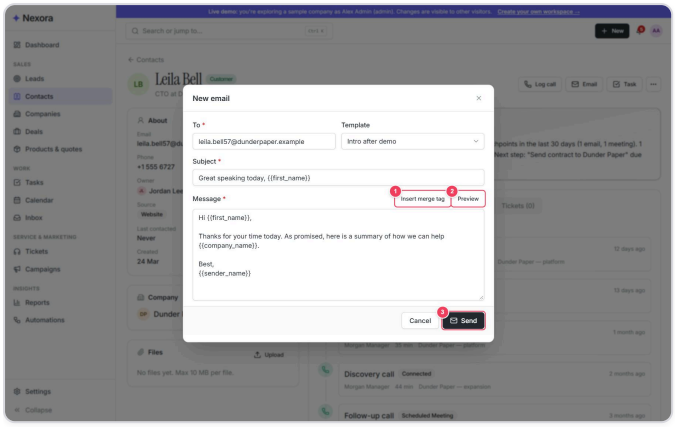

Log a call, meeting or note

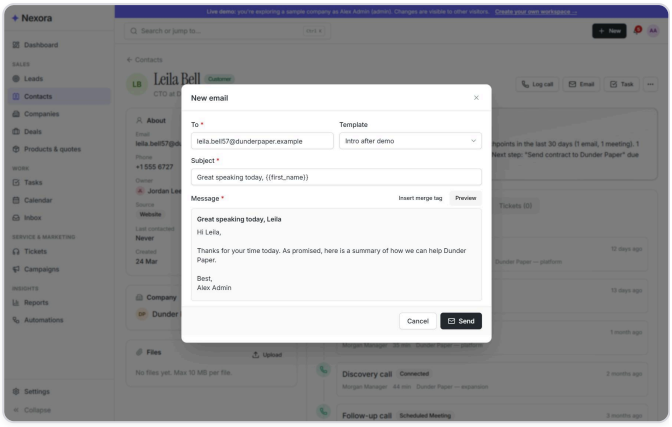

1. Click **Log call** (or ··· → *Log meeting* / *Add note*). Switch between **Call**, **Meeting** and **Note** with the buttons at the bottom.
2. Type a **Subject** (e.g. "Discovery call") and any **Details**.
3. For calls, choose the **Outcome** (connected, voicemail, no answer…) and **Duration** in minutes.
4. Planning something for later? Fill in **Scheduled for**. It then shows on the calendar with a **Mark done** button. Leave it empty if it already happened.
5. Click **Save**.

> **Good to know**
> Logging a call, email or meeting automatically updates the contact's "last contacted" date, keeps the deal from being flagged as "gone quiet", and for leads records the first response and raises their score.

Write an email

The email composer with a template chosen.

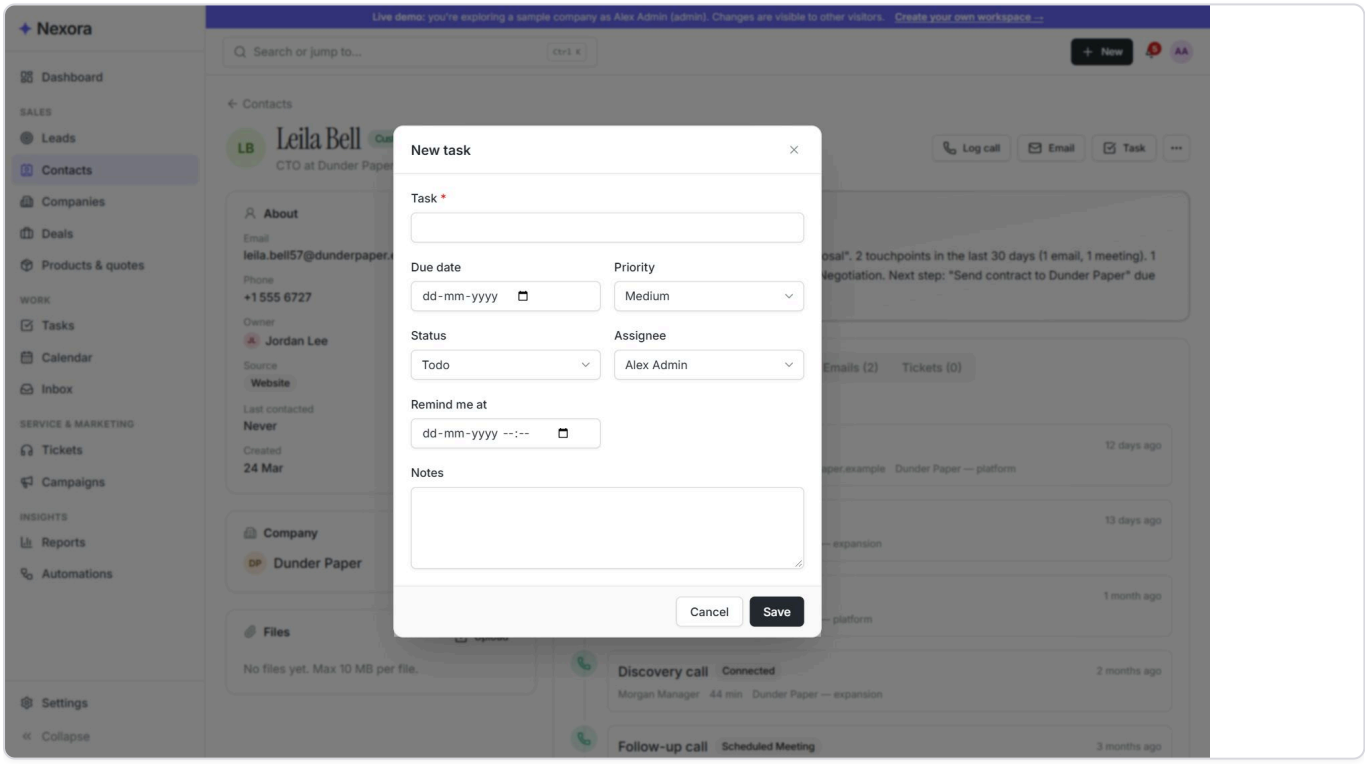

Preview: merge tags replaced with real values.

1. **Insert merge tag**: adds a placeholder like `{{first_name}}` that becomes the real value when sent.
2. **Preview**: shows exactly what the recipient will see.
3. **Send**: sends it and saves it on the timeline and in your Inbox.

Pick a **Template** at the top right to fill in the subject and body (chapter 18).

Create a task

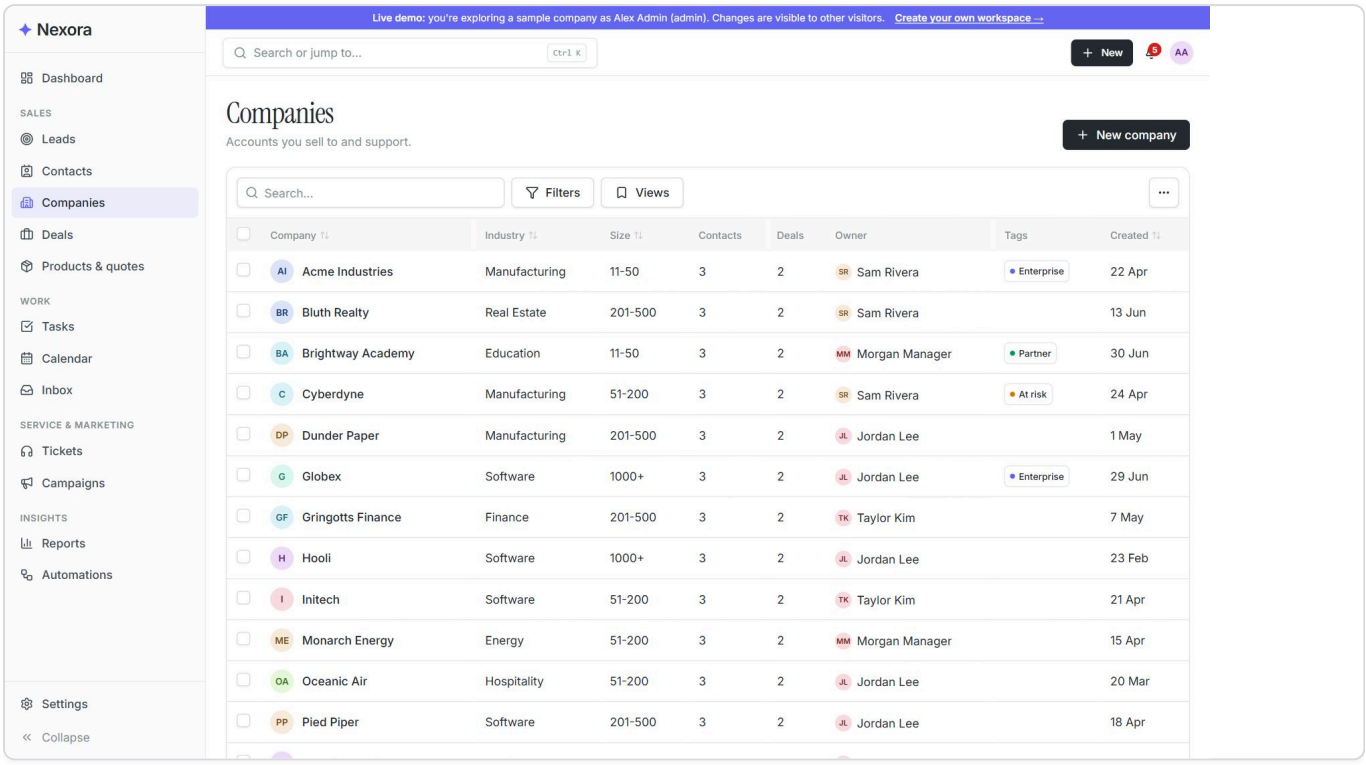

Give it a title, **due date**, **priority** (low, medium, high, urgent), status and **assignee**. **Remind me at** sends a notification at that time. Tasks created from a record stay linked to it.

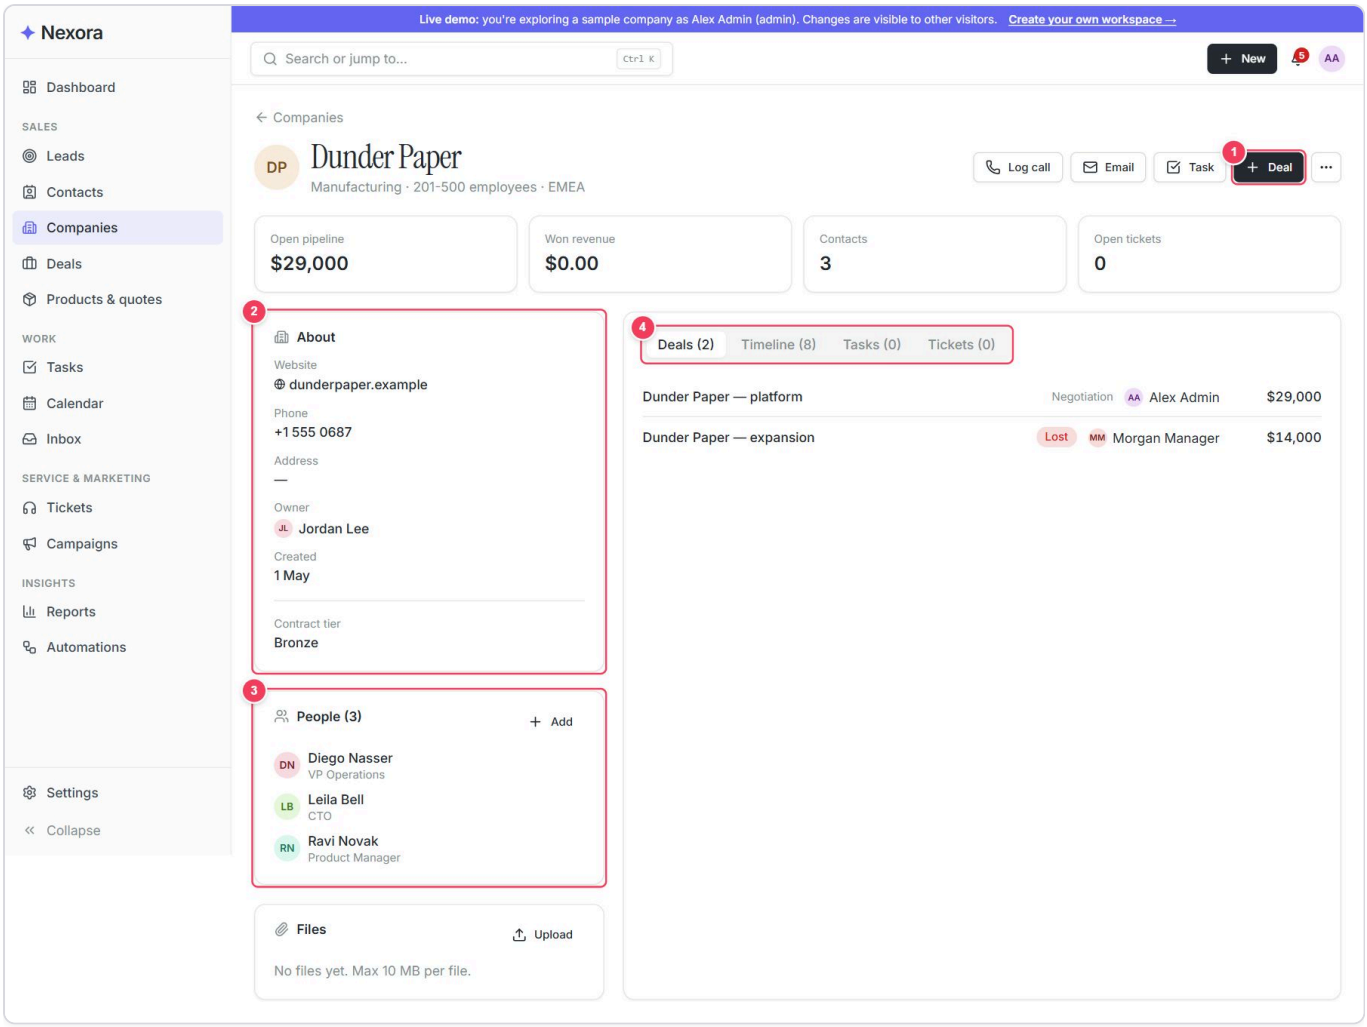

CHAPTER 11

Companies

The organizations your contacts work for and your deals are with.

The companies list shows how many contacts and deals each has.

1. **Deal**: start a new deal with this company already filled in.
2. **About**: website, phone, address, owner, tags and custom fields.
3. **People**: everyone who works there. **+ Add** creates a new contact at this company.
4. **Tabs**: the company's deals, timeline, tasks and tickets.

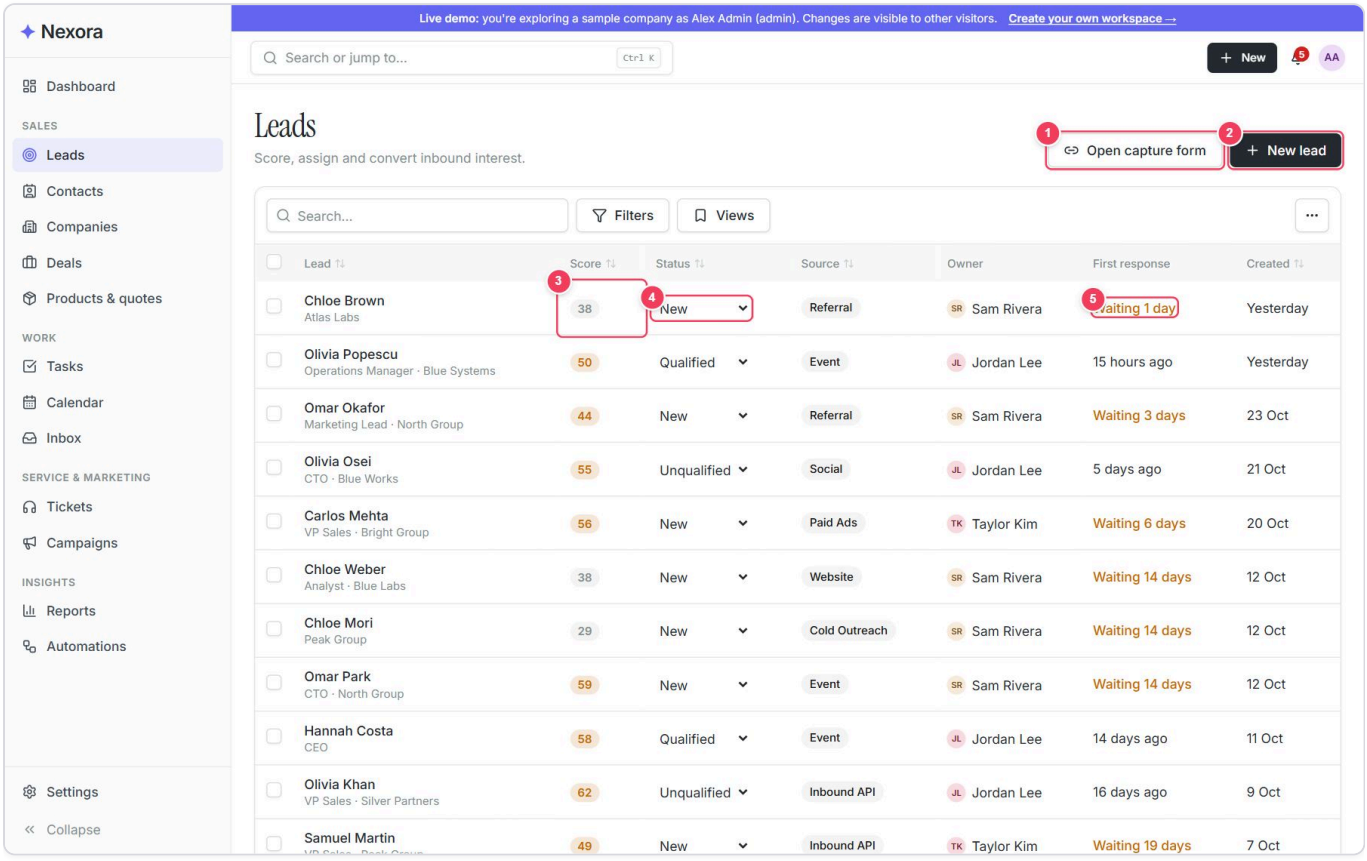

The four numbers at the top give an instant health check: **open pipeline**, **won revenue**, **contacts** and **open tickets**.

> **Rookie tip**
> You rarely need to create companies by hand: converting a lead, or importing contacts with a "Company" column, creates them for you.

CHAPTER 12

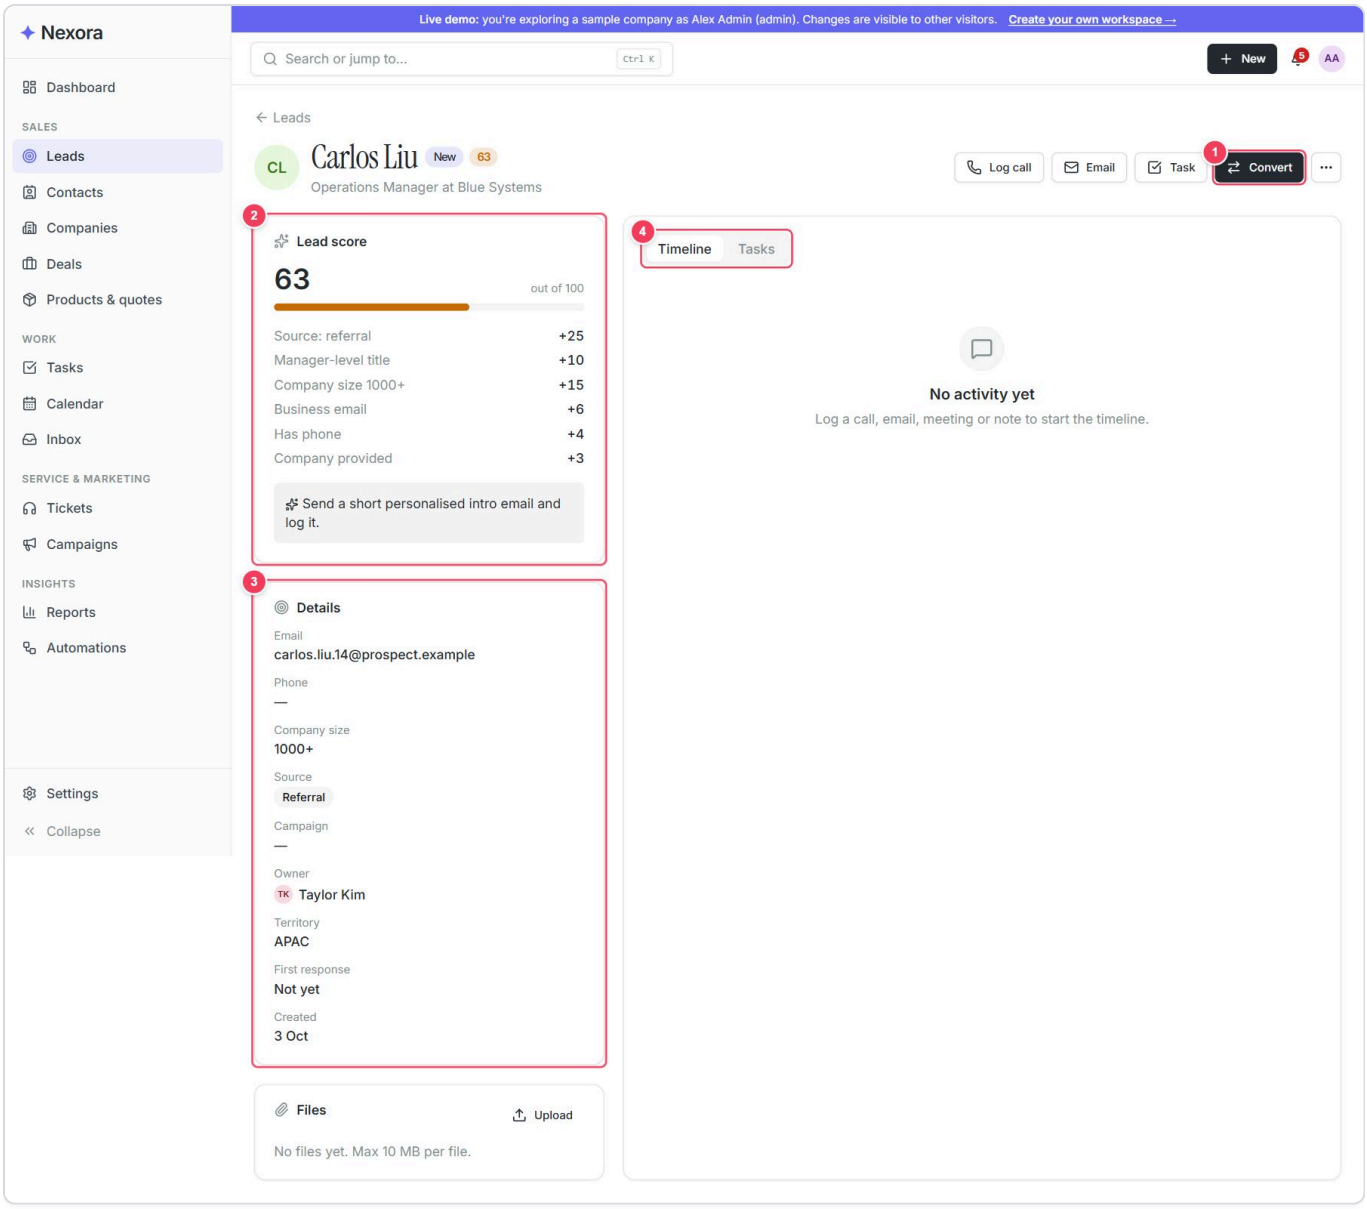

Leads

Leads are possible customers you haven't qualified yet. Nexora scores each one and can share them out across your team automatically.

1. **Open capture form** (admins): your public web form; anything submitted becomes a lead.
2. **New lead**: add one by hand.
3. **Score** (0–100): how promising the lead is. 🔥 70+ is hot, amber is warm, grey is cold.
4. **Status**: New → Contacted → Qualified (or Unqualified). Change it inline.
5. **First response**: amber "Waiting…" means nobody has contacted them yet.

The lead page

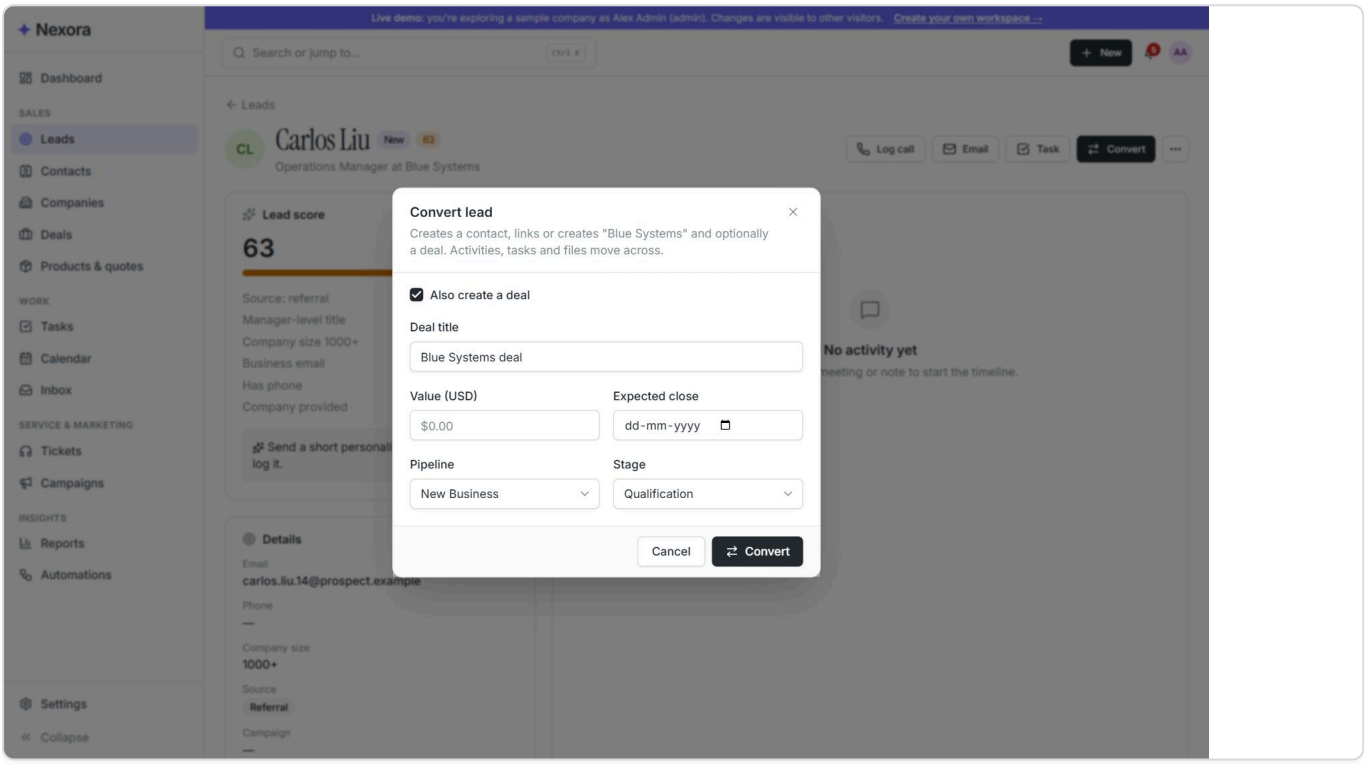

1. **Convert**: turn the lead into a contact (and usually a deal).
2. **Lead score**: the score, a bar, exactly where each point came from, and an AI suggestion for your next move.
3. **Details**: contact info, source, campaign, owner, territory and when they were first contacted.
4. **Tabs**: timeline and tasks for this lead.

How the score is calculated

Signal	Points
Where they came from	Referral 25 · Partner 20 · Webinar 18 · Event 15 · Website form/API 15 · Website 12 · Paid ads 10 · Social 8 · Cold outreach 5
Job title	Boss level (CEO, founder, VP…) 25 · Director/Head 18 · Manager/Lead 10 · other 3
Company size	1000+ 15 · 501–1000 13 · 201–500 12 · 51–200 10 · 11–50 6 · 1–10 3
Details given	Work email 6 (Gmail-type 3) · Phone 4 · Company 3 · Left a message 5
Engagement	+4 for every call, email or meeting you log, up to 20

Convert a lead

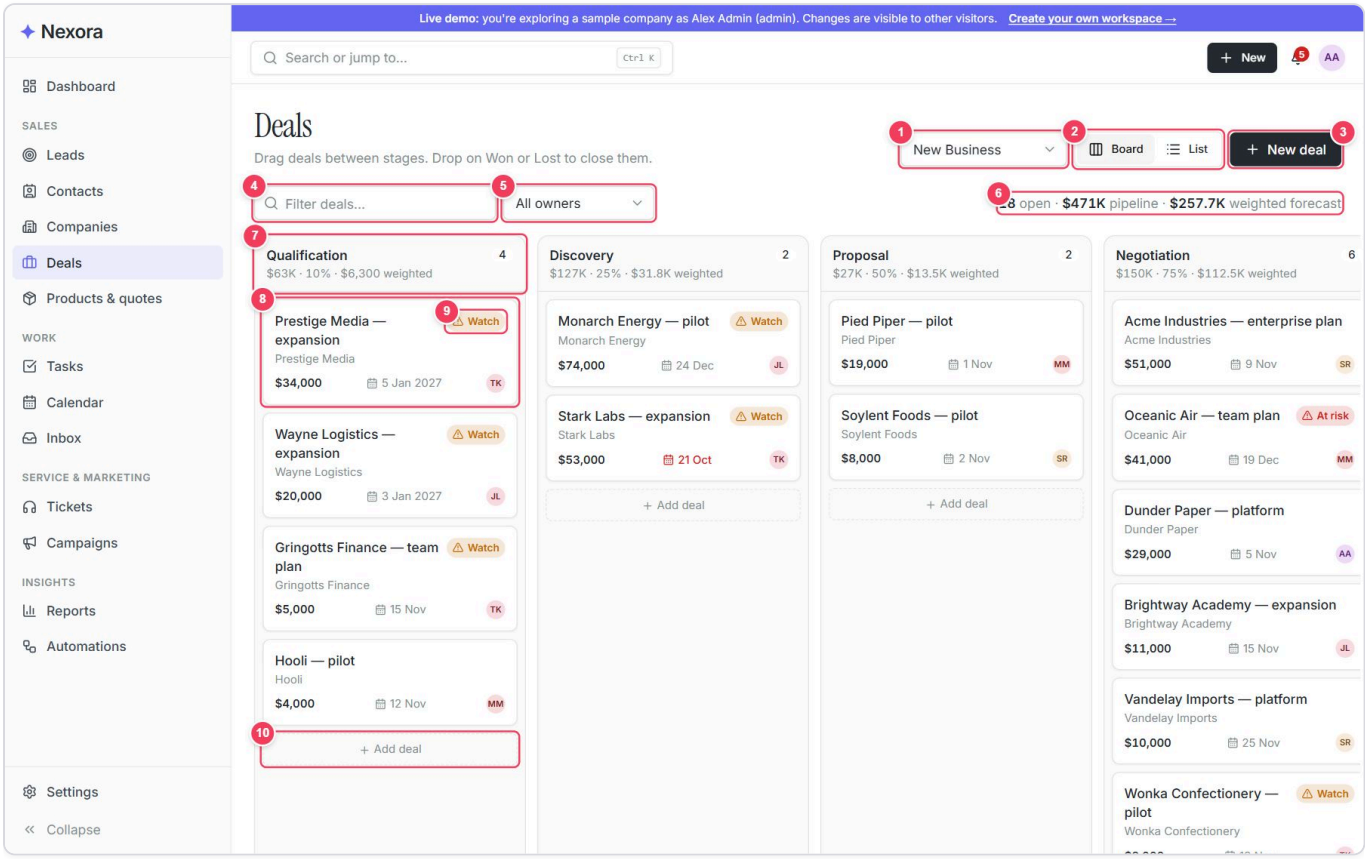

1. On the lead page click **Convert**.
2. Keep **Also create a deal** ticked if there's a real sales opportunity. Set the deal title, value, expected close date, pipeline and stage.
3. Click **Convert**. Nexora creates the **contact**, finds or creates the **company**, creates the **deal**, and moves the lead's history over. You land on the new deal.

> **Good to know**
> Leads arriving through the web form are **assigned automatically**, taking turns among the sales reps (or by territory), and the new owner gets a notification. Admins choose the rule in Settings → Organization.

CHAPTER 13

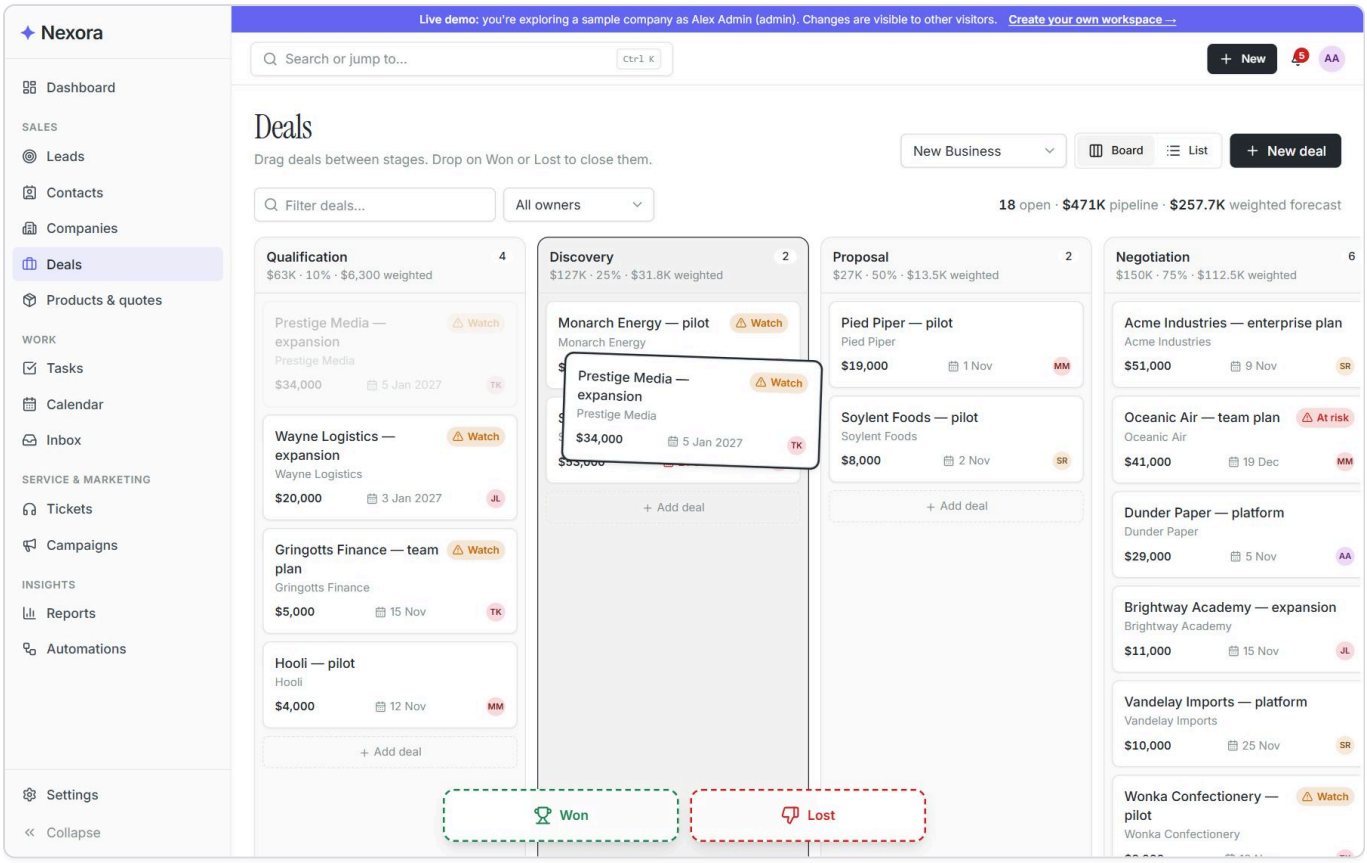

Deals: the pipeline board

The board shows every open deal as a card in its stage column. Moving a card is how you show progress.

1. **Pipeline**: switch pipeline if your company has more than one (e.g. New Business vs Renewals).
2. **Board / List**: choose cards or a table (your choice is remembered).
3. **New deal**.
4. **Filter deals**: type to show only matching cards.
5. **Owner**: show everyone's deals, only yours, or one person's.
6. **Totals**: open deals, total pipeline value and **weighted forecast** (realistic expected revenue).
7. **Column header**: stage name, number of deals, total value, win probability and weighted value.
8. **Deal card**: title, company, value, expected close date (red when overdue) and owner initials. Click the title to open it.
9. **Risk flag**: amber *Watch* or red *At risk*. Hover to see why.
10. **+ Add deal**: new deal starting in this stage.

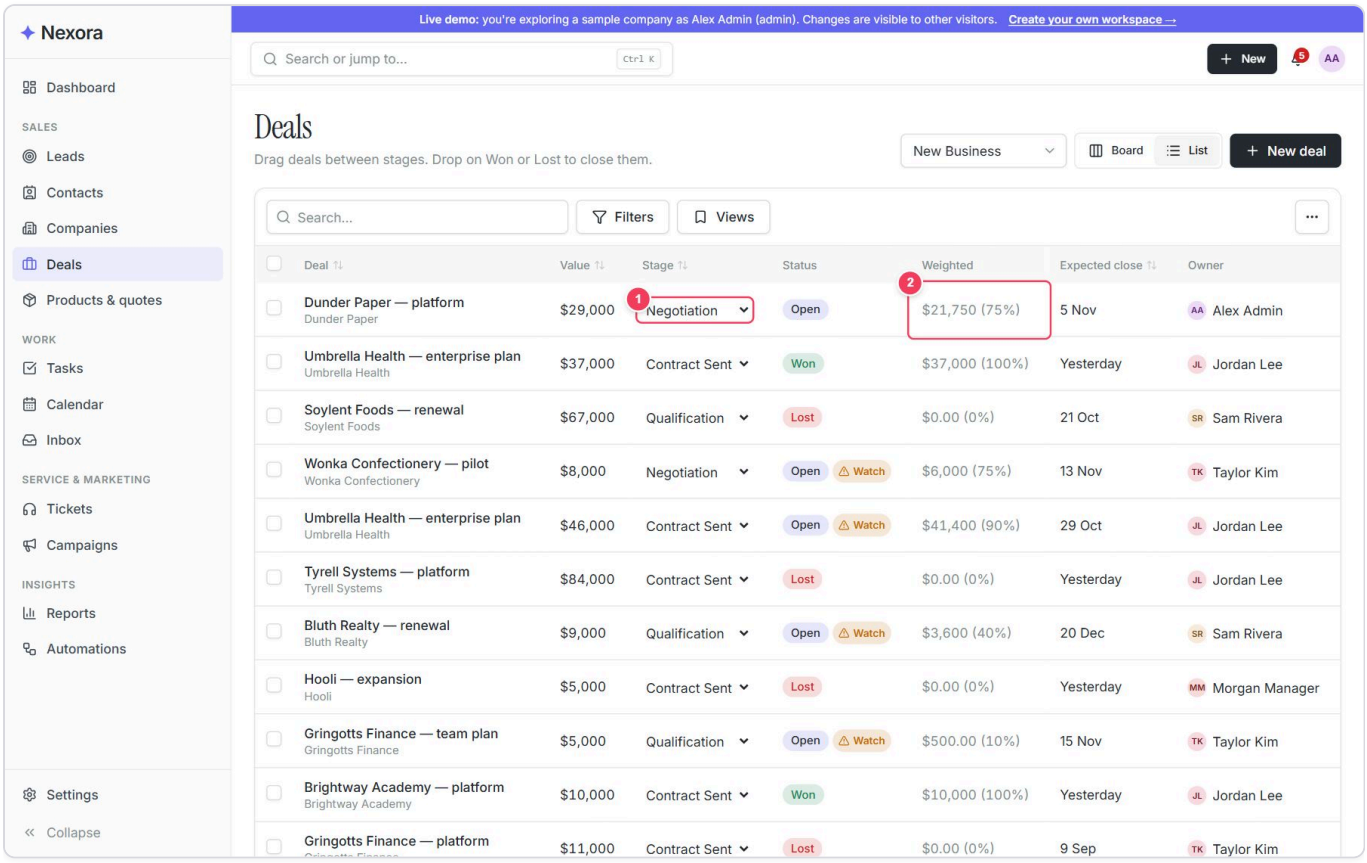

Move a deal by dragging

While you drag, Won and Lost drop zones appear at the bottom.

1. Press and hold on a card (anywhere except its title) and drag it to another column. Let go to drop it. It saves instantly.
2. Drop on **Won** to mark it won 🎉, or on **Lost**, where you're asked for the reason.
3. If saving fails (for example, you lost internet), the card jumps back and an error appears.

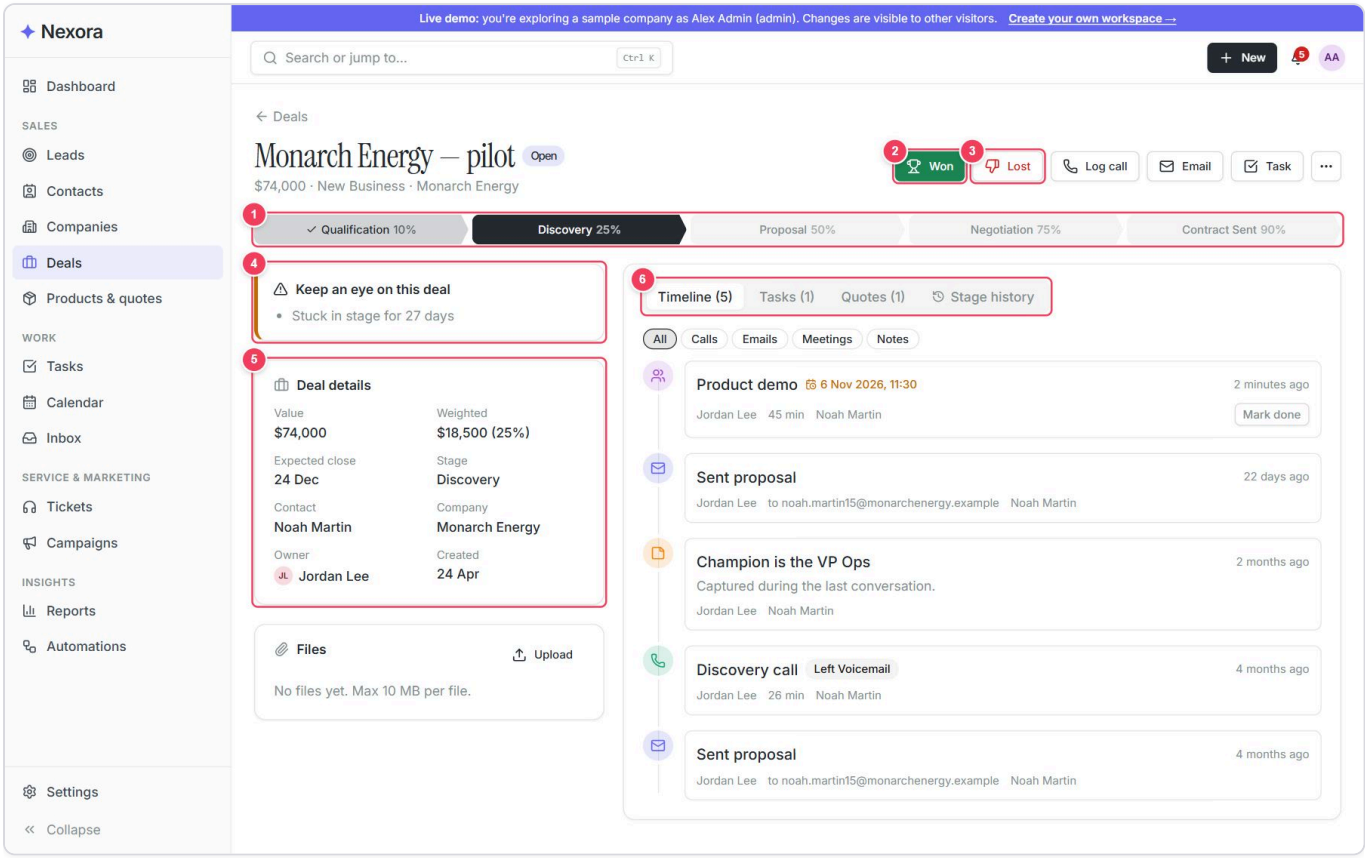

List view

1. **Stage**: change the stage right in the table.
2. **Weighted**: value × probability, with the % in brackets.

CHAPTER 14

A deal's page

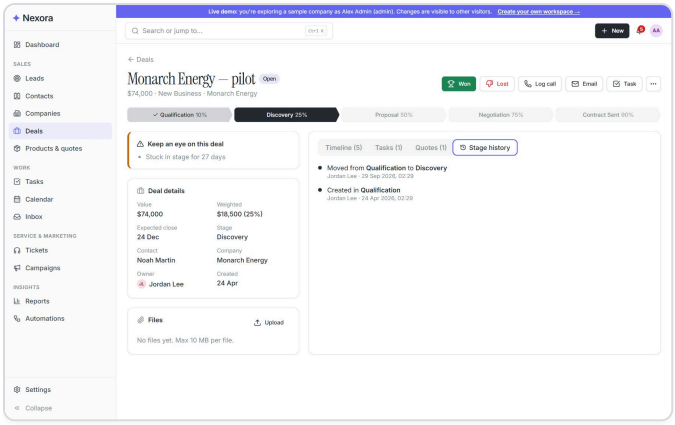

1. **Stage path**: the deal's journey. Click any stage to move it there. ✓ marks completed stages.
2. **Won**: mark the deal won. Revenue appears on dashboards and the contact becomes a Customer.
3. **Lost**: mark it lost and pick a reason. Closed deals show **Reopen** instead.
4. **Risk card**: appears when something looks wrong, and says what.
5. **Deal details**: value, weighted value, expected close, stage, contact, company, owner and dates.
6. **Tabs**: Timeline, Tasks, Quotes and Stage history.

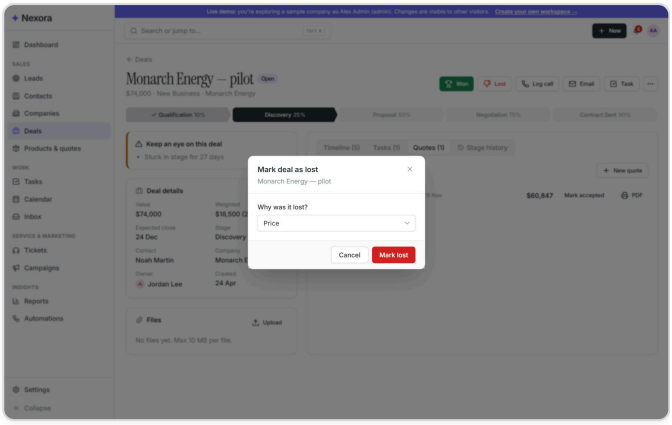

Warning signs (risk flags)

Sign	When it appears	How to clear it
No activity	Nothing logged for 14+ days	Log a call, email or meeting
Stuck in stage	Same stage for 21+ days	Move it forward (or close it)
Close date passed	Expected close date is in the past	Update the date or close the deal
Closing at low probability	Closing within 7 days at under 50%	Advance the stage or move the date
No close date	Expected close date is empty	Edit the deal and add one

One sign = amber **Watch**. Two or more = red **At risk**.

Stage history: who moved it, when, from where.

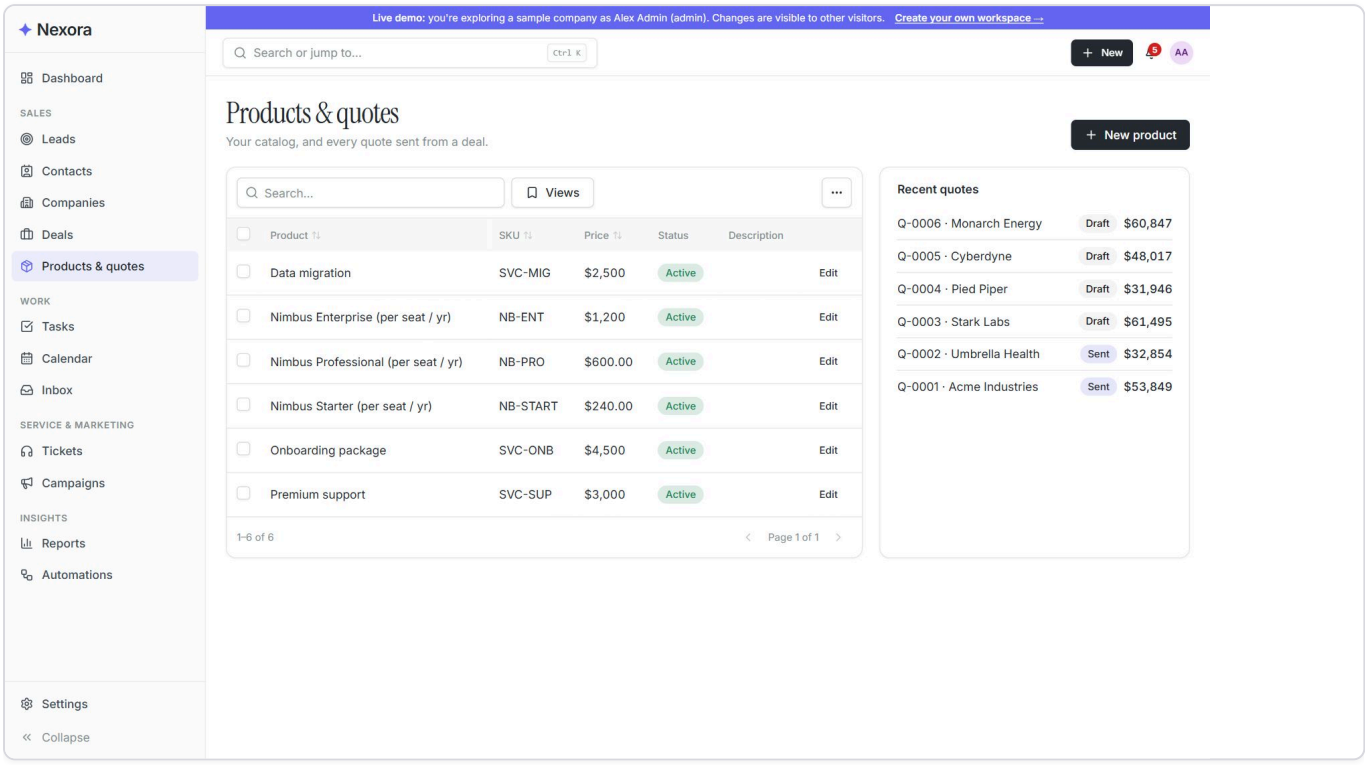

Marking a deal lost asks for a reason.

Loss reasons: Price, Competitor, No budget, No decision, Timing, Missing features, Went silent, Other. The **Lost-reason** report (chapter 21) shows which ones hurt most.

CHAPTER 15

Products and quotes

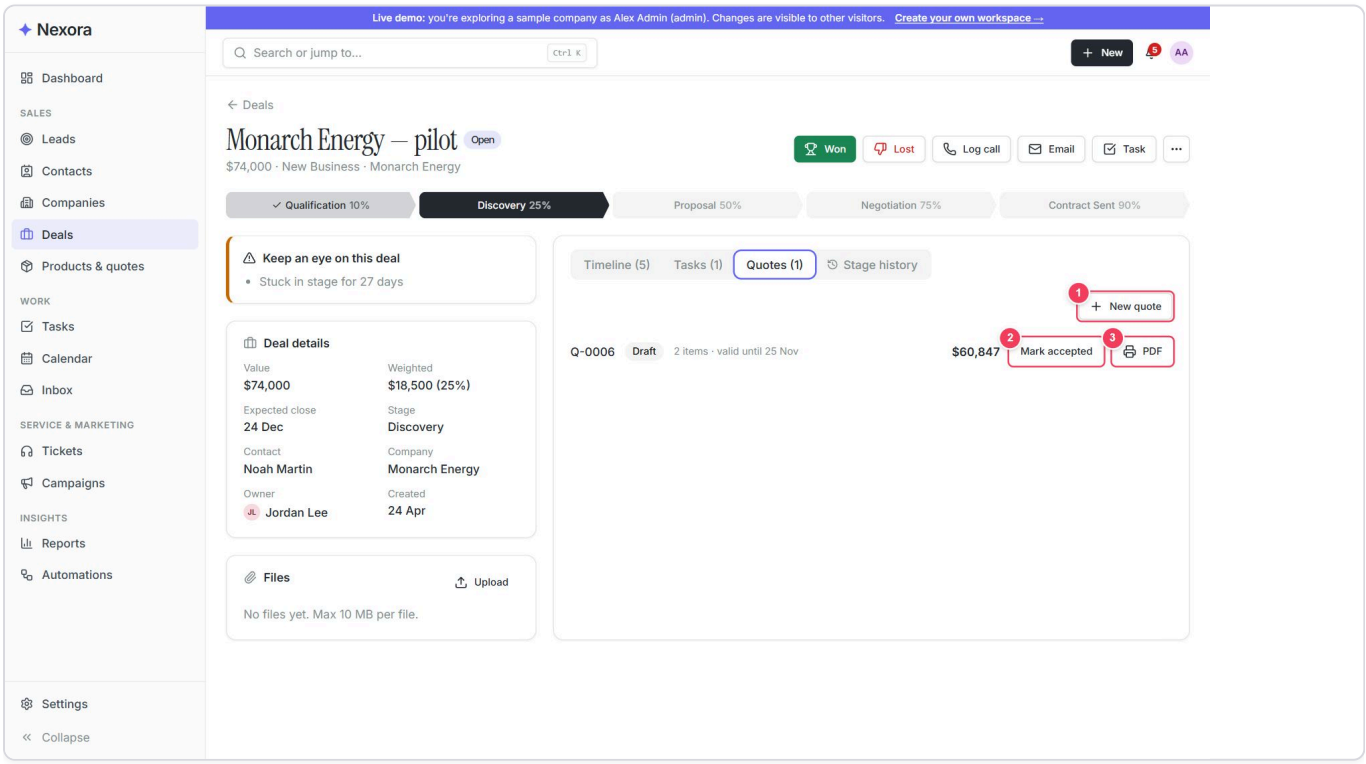

Keep a price list, then build accurate quotes for a deal in a minute.

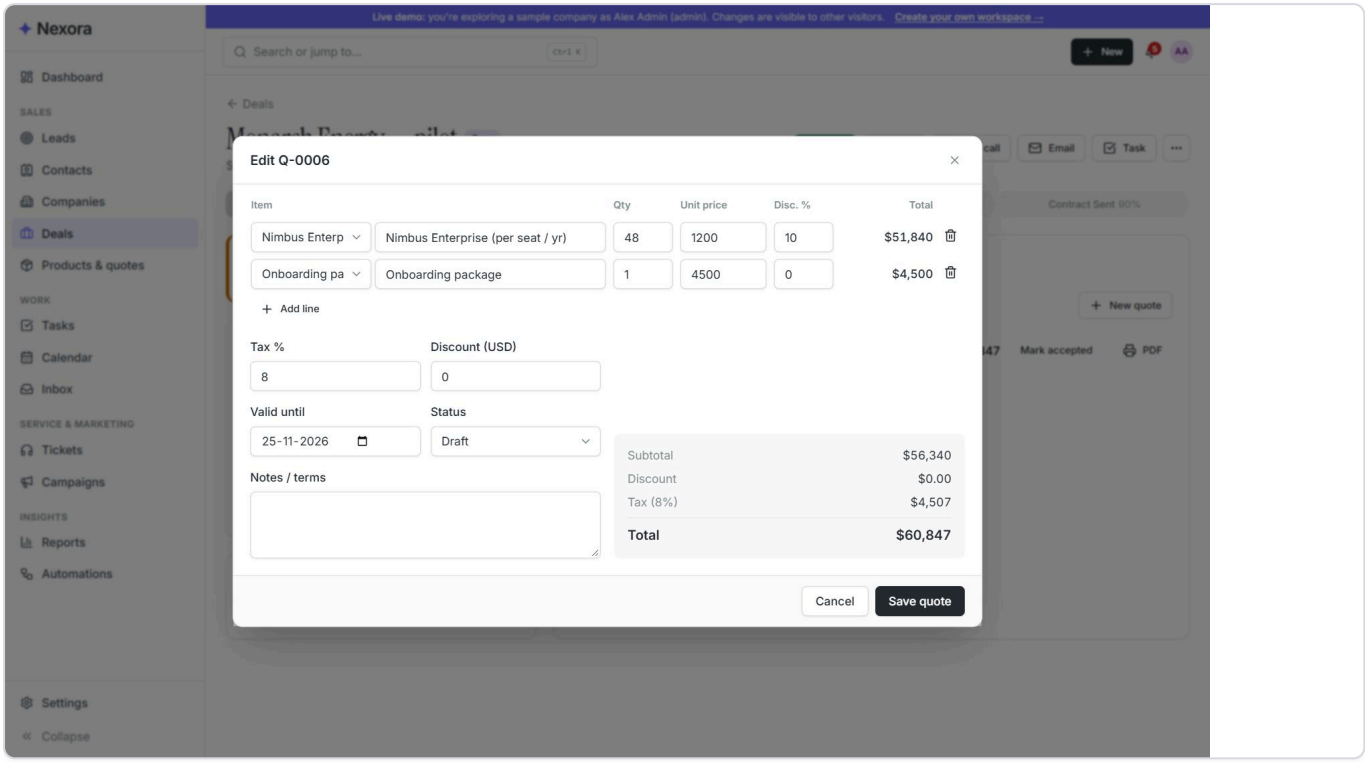

Products & quotes: your catalog (left) and recent quotes (right).

Managers add products with **New product**: name, SKU (product code), unit price, description and whether it's active.

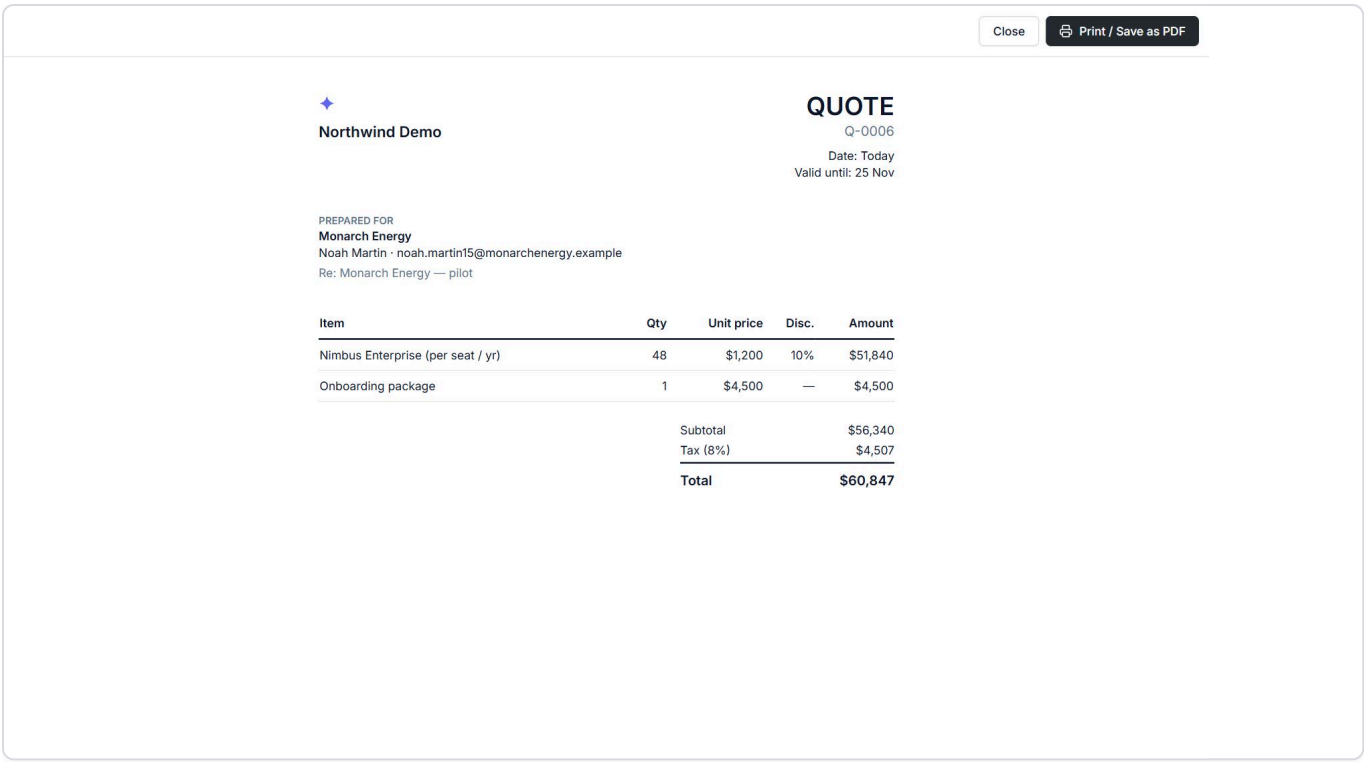

Make a quote

1. **New quote**: opens the quote editor.
2. **Mark accepted**: the customer said yes. The deal's value is updated to the quote total.
3. **PDF**: opens a printable quote to save as PDF and send.

1. For each line, pick a **product** (name and price fill in) or *Custom item*. Set **quantity**, **unit price** and optional **discount %**. **Add line** for more.
2. Set **Tax %**, an overall **Discount** amount, **Valid until**, the status and any notes or terms.
3. The totals box updates as you type: *subtotal − discount + tax = total*.
4. Click **Create quote**. Quotes are numbered Q-0001, Q-0002…

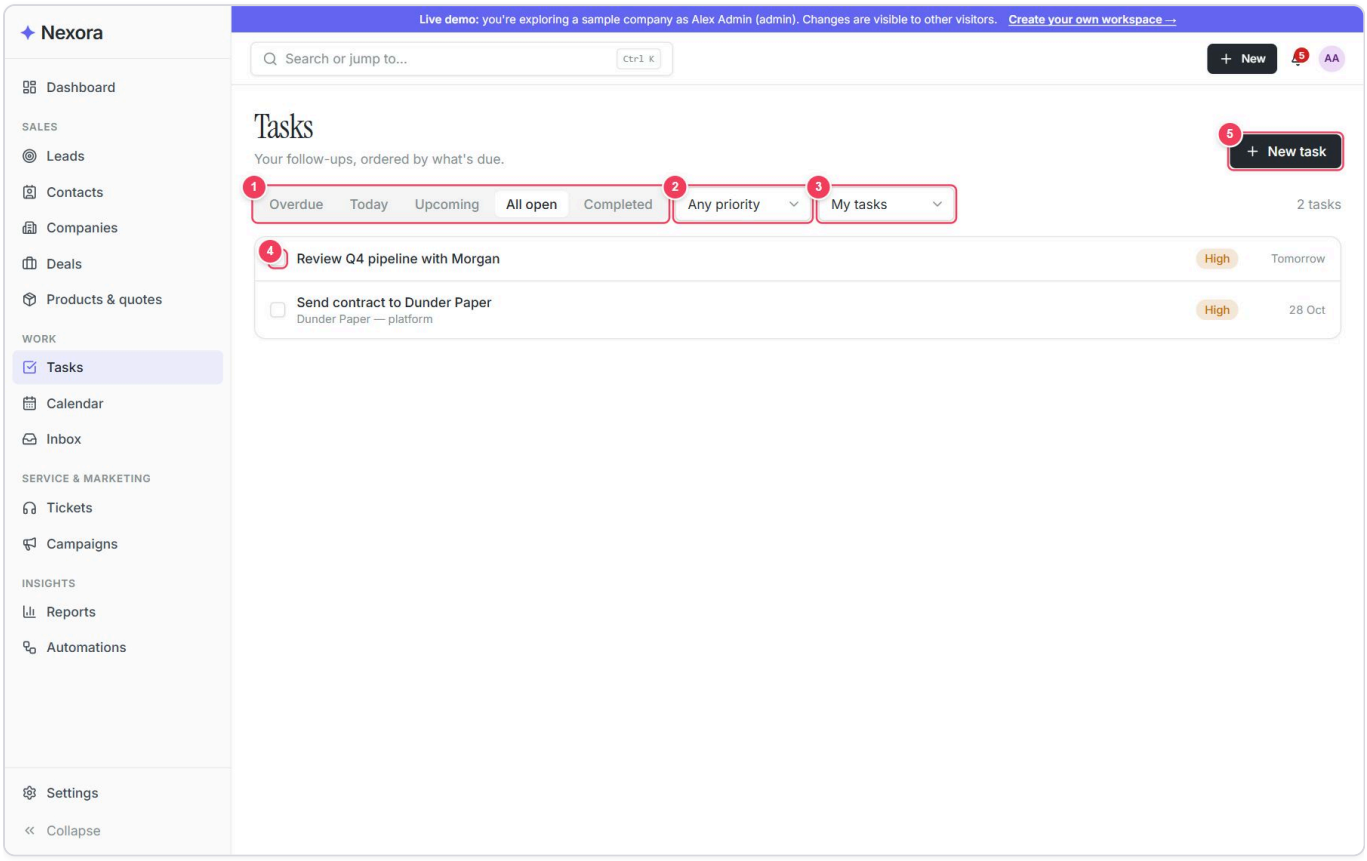

The printable quote. Click Print / Save as PDF and choose “Save as PDF”.

CHAPTER 16

Tasks

Your personal to-do list for customer work, sorted by what's due.

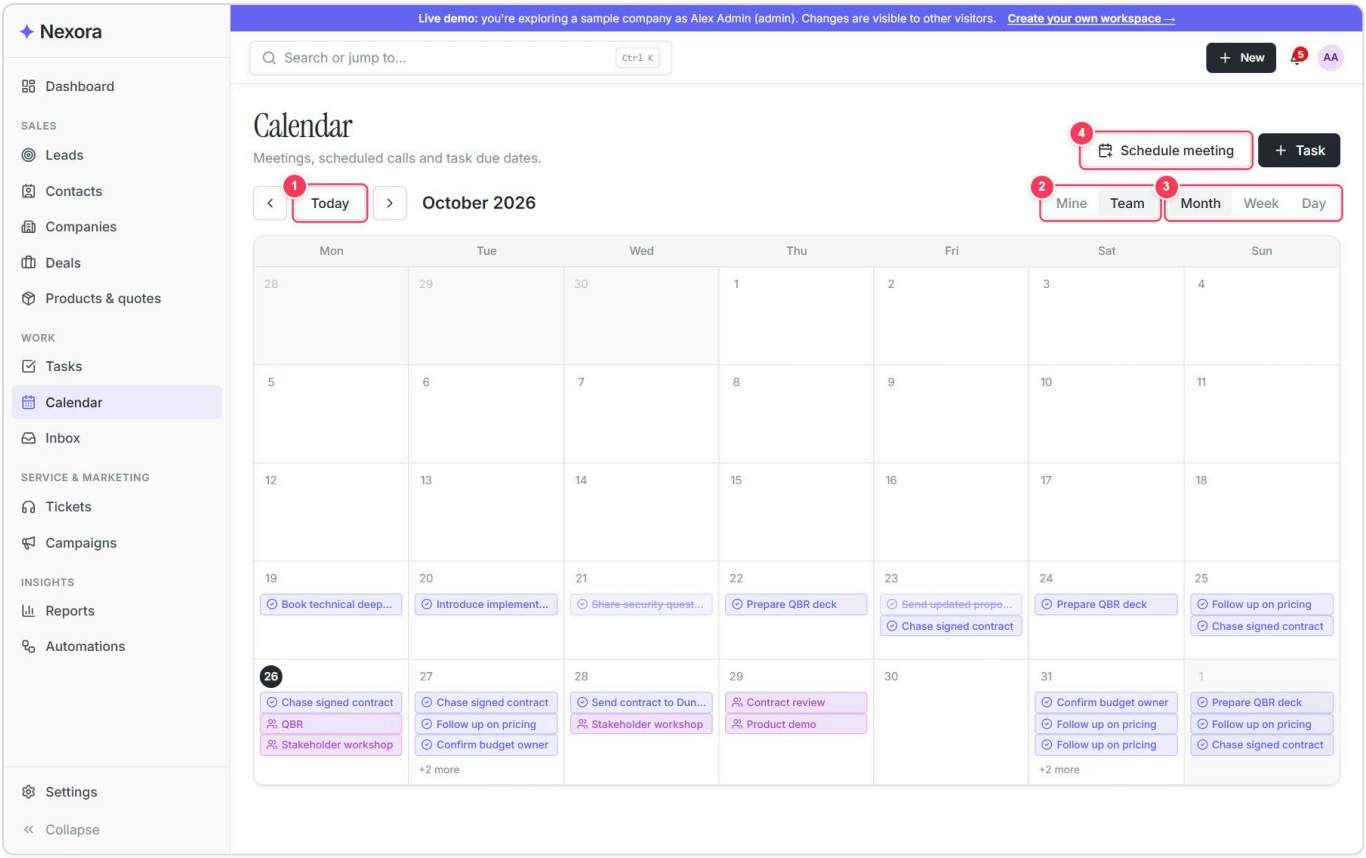

1. **Views**: *Overdue* (red count), *Today*, *Upcoming*, *All open* and *Completed*.
2. **Priority filter**: show only urgent, high… tasks.
3. **My tasks / Team tasks** (managers and admins).
4. **Checkbox**: tick to complete. An **Undo** button appears for a few seconds.
5. **New task**.

Click a task's title to edit it. The small link under it opens the related deal or contact. Dates in red are overdue.

> **Rookie tip**
> Every time you finish a call, create the next task before you hang up mentally: "Follow up Tuesday". Deals rarely die when there's always a next step.

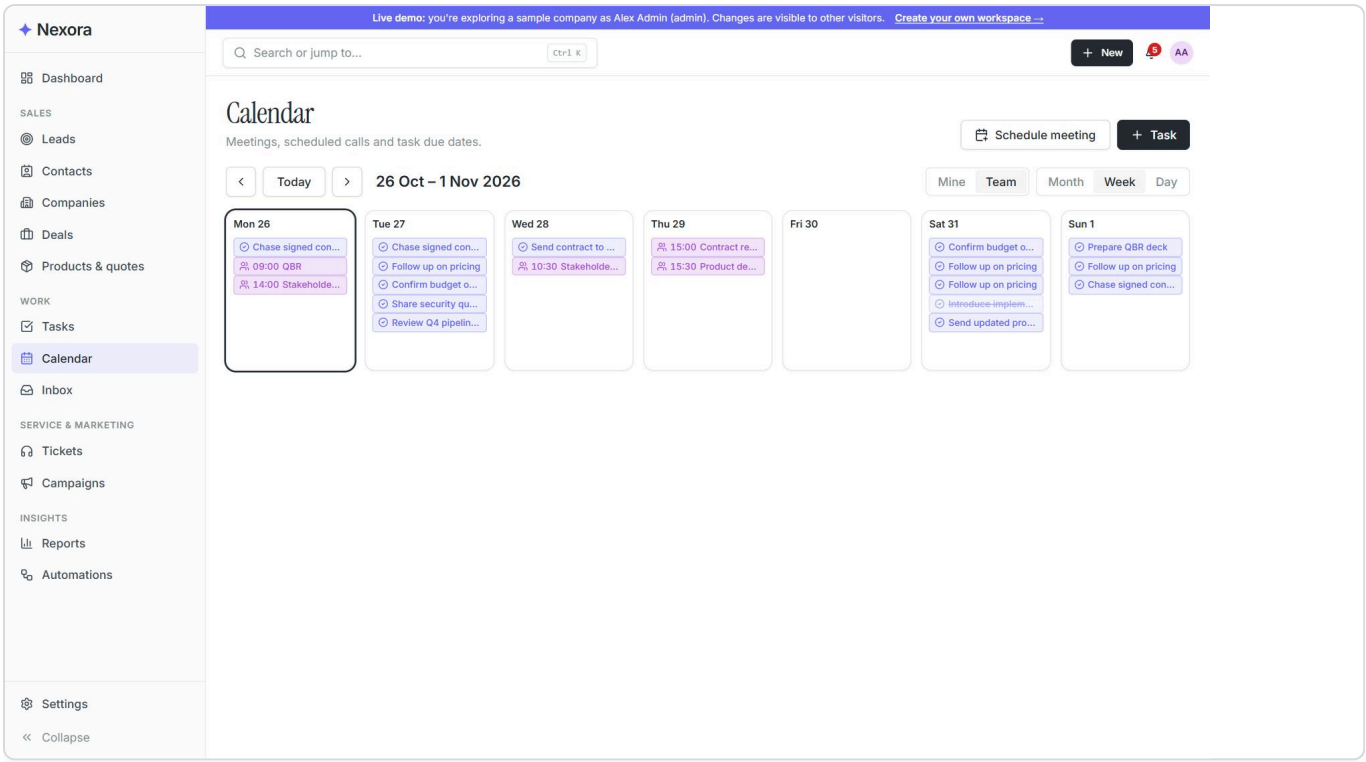

CHAPTER 17

Calendar

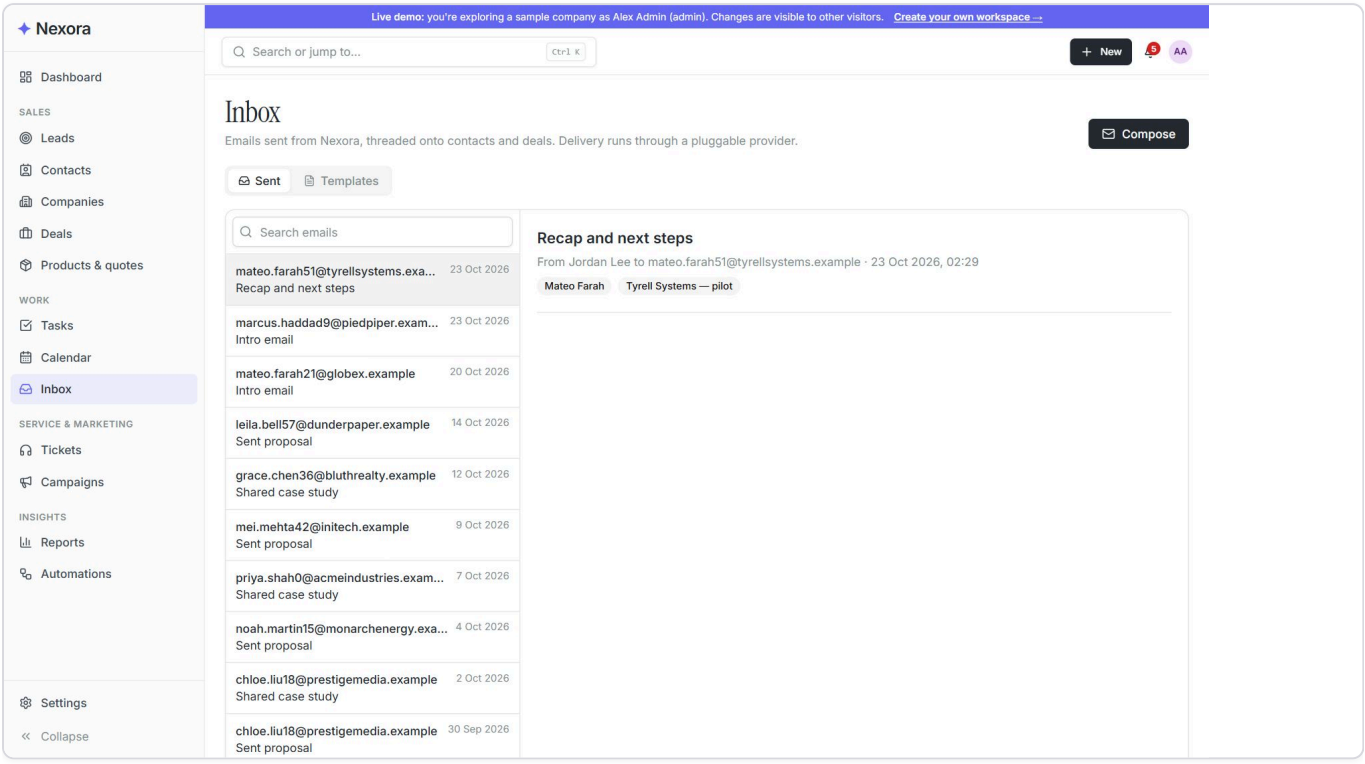

1. **Today**: jump back to today. The arrows beside it go backward and forward.
2. **Mine / Team**: only your items, or everyone's you're allowed to see.
3. **Month / Week / Day** views.
4. **Schedule meeting**: log a future meeting with a date and time.

Coloured chips: meetings (purple), calls (green), tasks (blue). Click a chip to open its deal or contact. In Month view, click a date number to see that day, or the small **+** on a day to add a task due that day.

CHAPTER 18

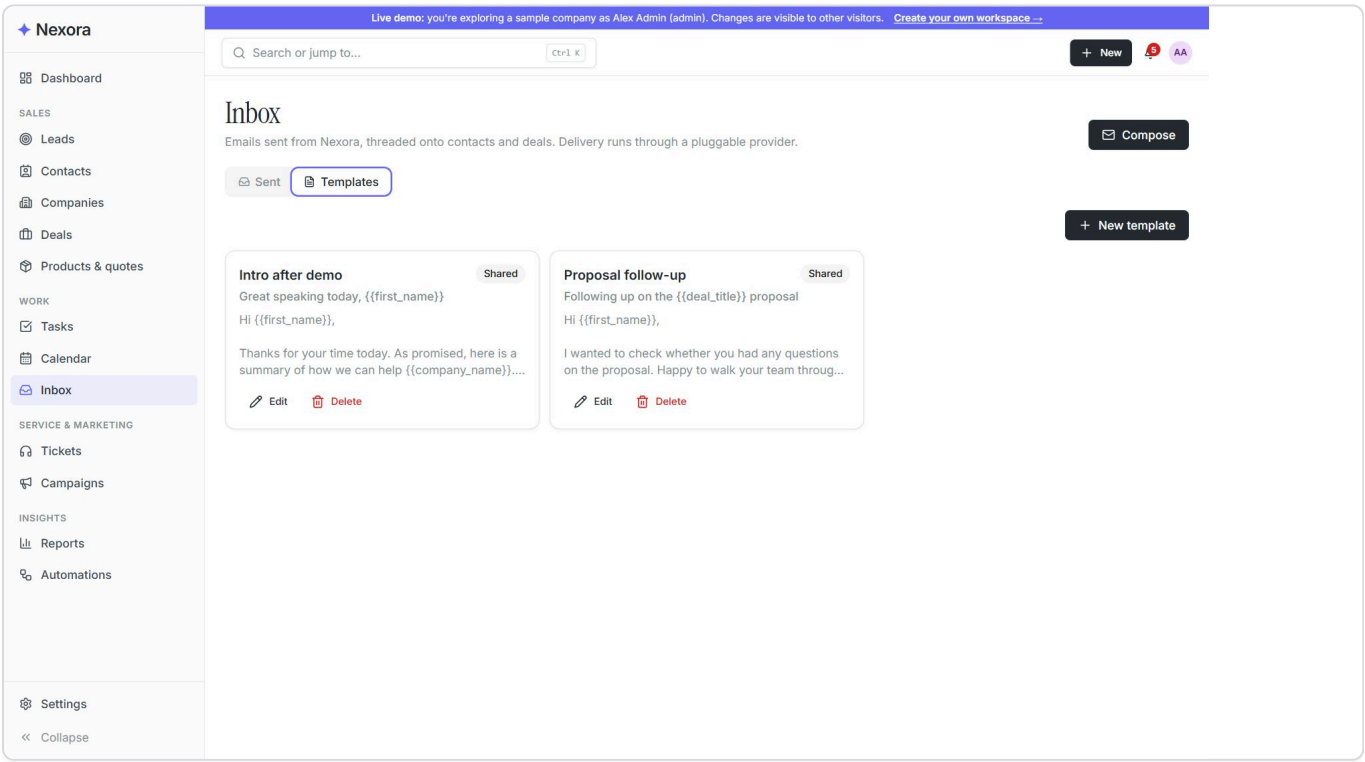

Inbox and email templates

Inbox → Sent: every email sent from Nexora. Click one on the left to read it on the right.

Use **Compose** (top right) to write a new email from here. The email is linked to the matching contact and deal.

Templates

1. Inbox → **Templates** → **New template**.
2. Give it a name, subject and body. Use merge tags so each email is personal.
3. Managers can tick **Share with the whole team**; everyone can make personal templates.

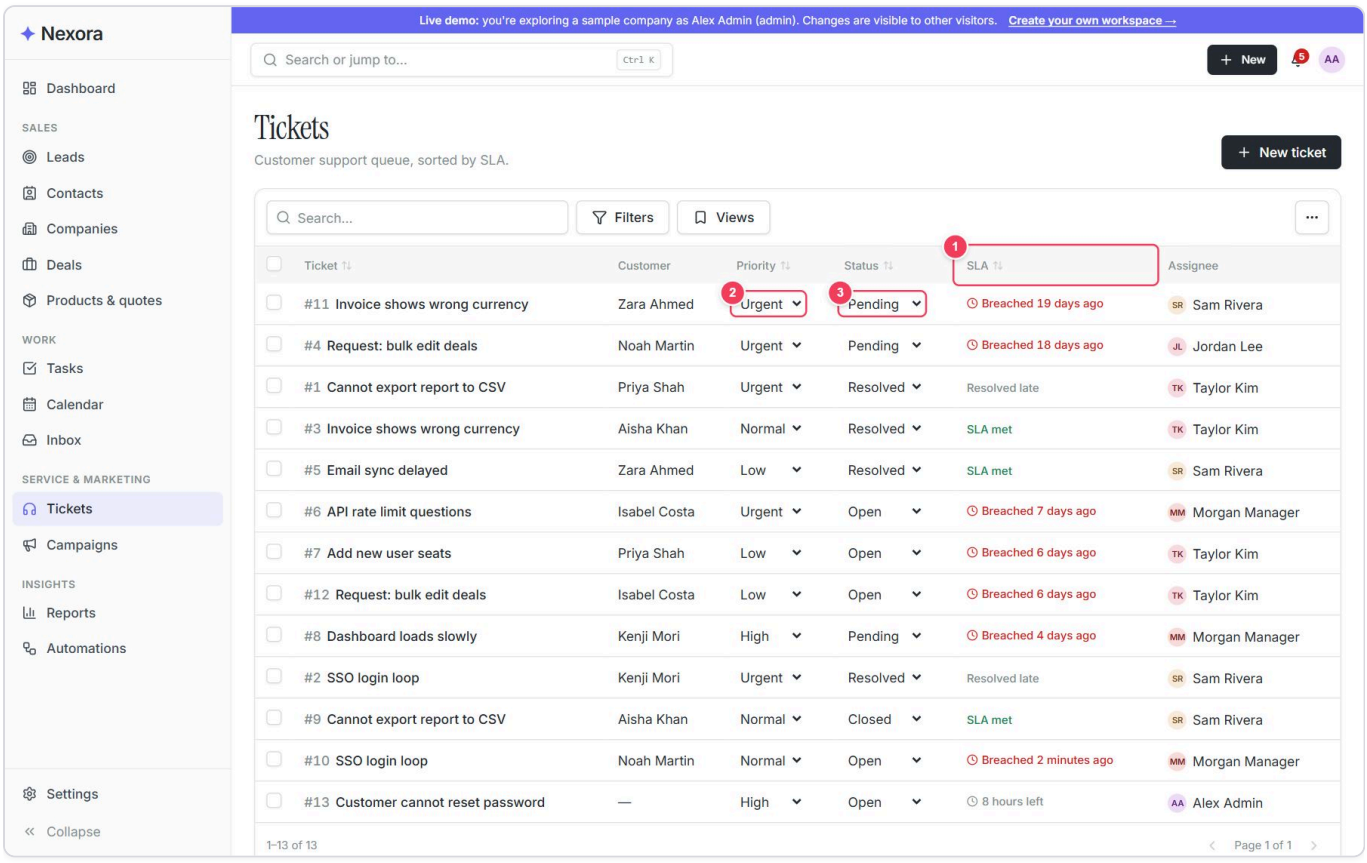

Merge tag	Becomes
`{{first_name}}` `{{last_name}}` `{{full_name}}`	The person's name
`{{company_name}}` `{{title}}` `{{email}}`	Their company, job title and email
`{{deal_title}}` `{{deal_value}}`	The linked deal
`{{sender_name}}` `{{sender_email}}`	You

> **Heads up**
> Out of the box, emails are saved in Nexora but **not actually delivered** (you'll see "Email logged (dev mode)"). Your administrator connects a real mail service to send them.

CHAPTER 19

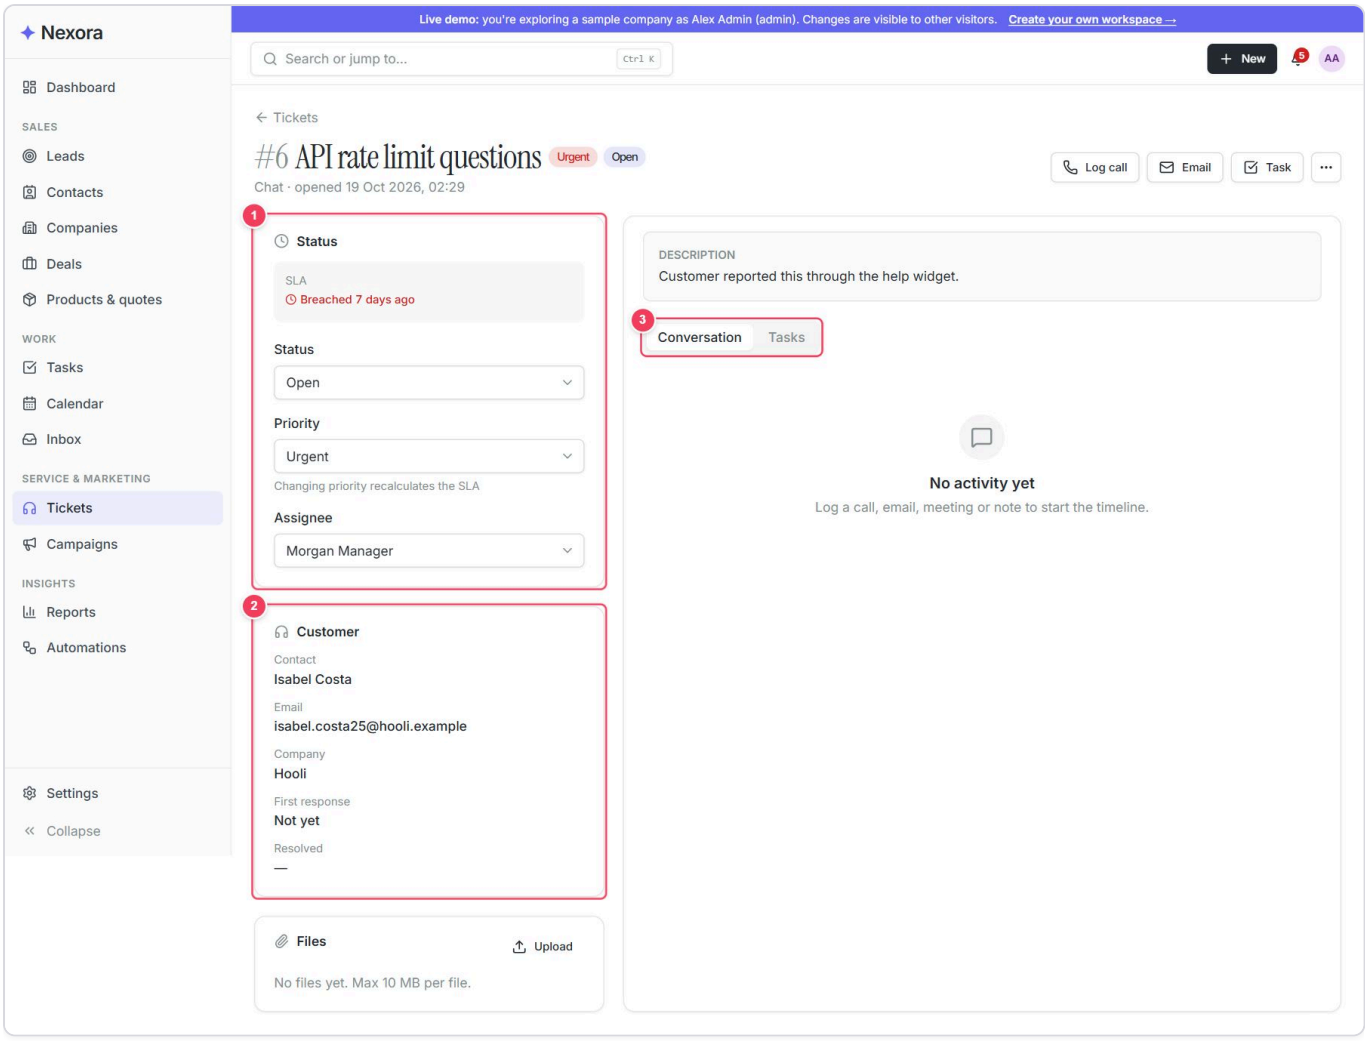

Support tickets

When a customer needs help, create a ticket so it's tracked against a deadline (the SLA, or service-level agreement).

1. **SLA**: time left before the deadline. Grey = fine, amber = under 2 hours, red = missed ("Breached").
2. **Priority**: change inline. Higher priority means a shorter deadline.
3. **Status**: Open → Pending (waiting on the customer) → Resolved → Closed.

Priority	Urgent	High	Normal	Low
Must be resolved within	4 hours	8 hours	24 hours	72 hours

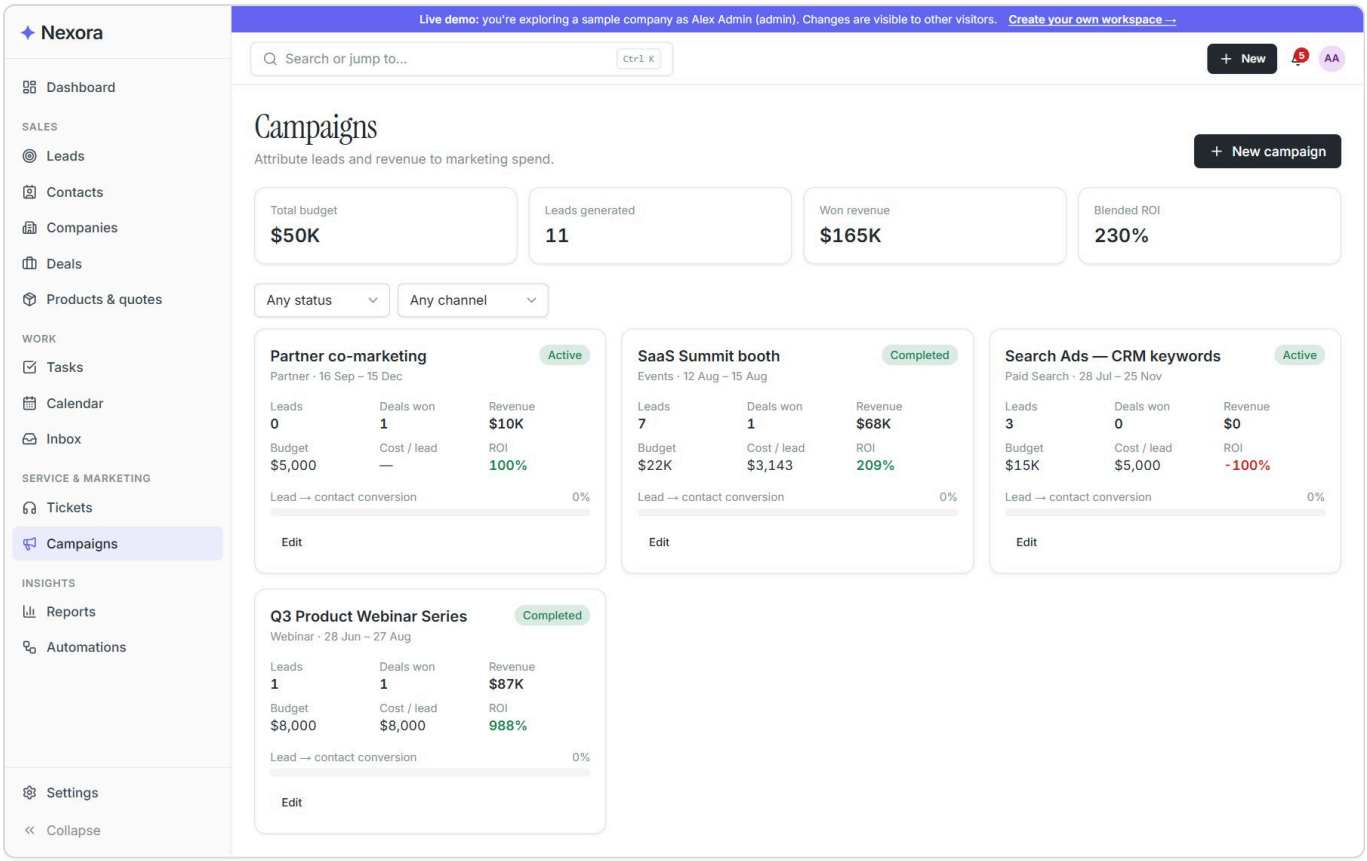

1. **Status** panel: live SLA timer, and drop-downs to change status, priority (recalculates the deadline) and assignee.
2. **Customer**: contact, email, company, first-response and resolved times.
3. **Conversation / Tasks**: every reply you log, and follow-ups.

Reply using **Email** or **Log call** at the top. Your first reply records the “first response” time. Tickets also appear on the customer’s contact page.

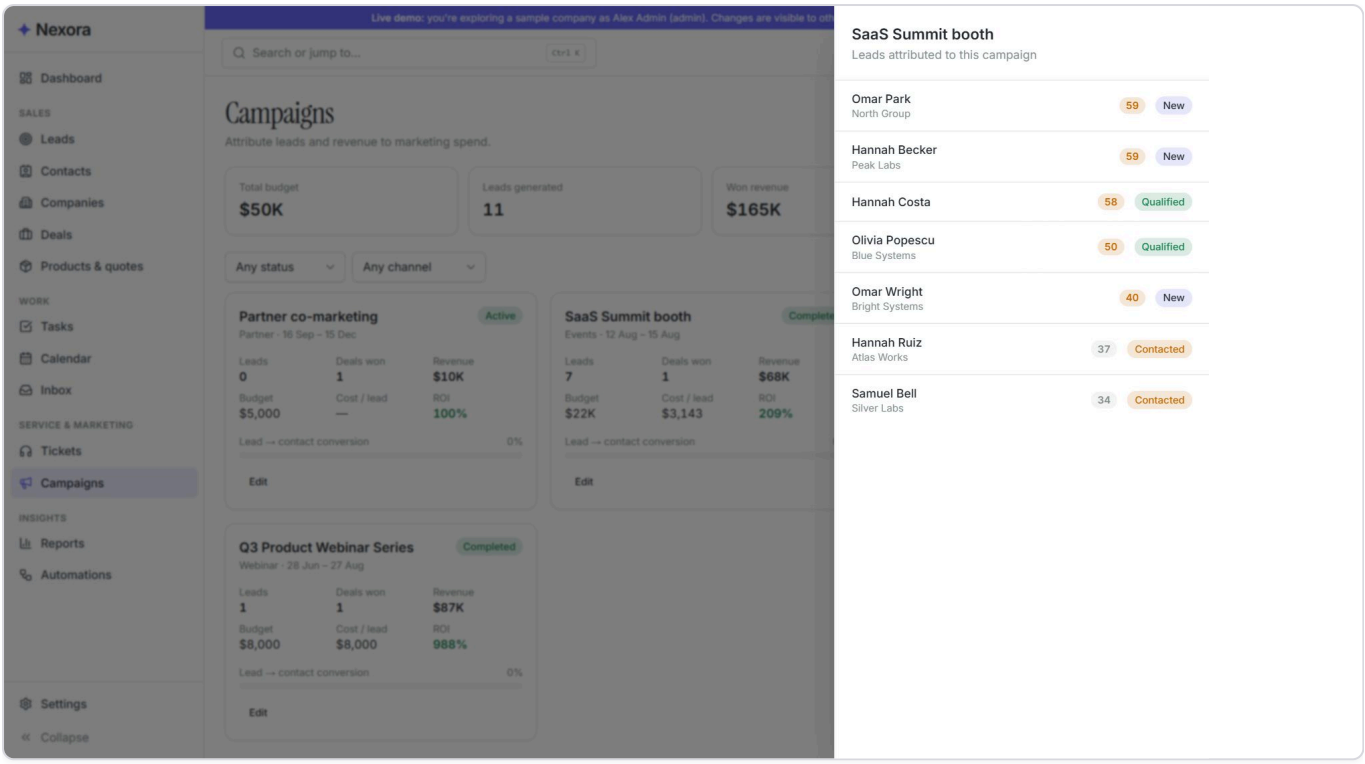

CHAPTER 20

Campaigns

See which marketing efforts actually bring in money.

1. Managers click **New campaign**: name, channel (email, social, paid search, events, content, webinar, partner), status, dates and budget.
2. When adding a lead or deal, choose the campaign it came from. Deals converted from a lead keep the lead's campaign.
3. Each card then shows leads, deals won, revenue, budget, **cost per lead** (budget ÷ leads) and **ROI** ((revenue − budget) ÷ budget). Green ROI = it paid for itself.

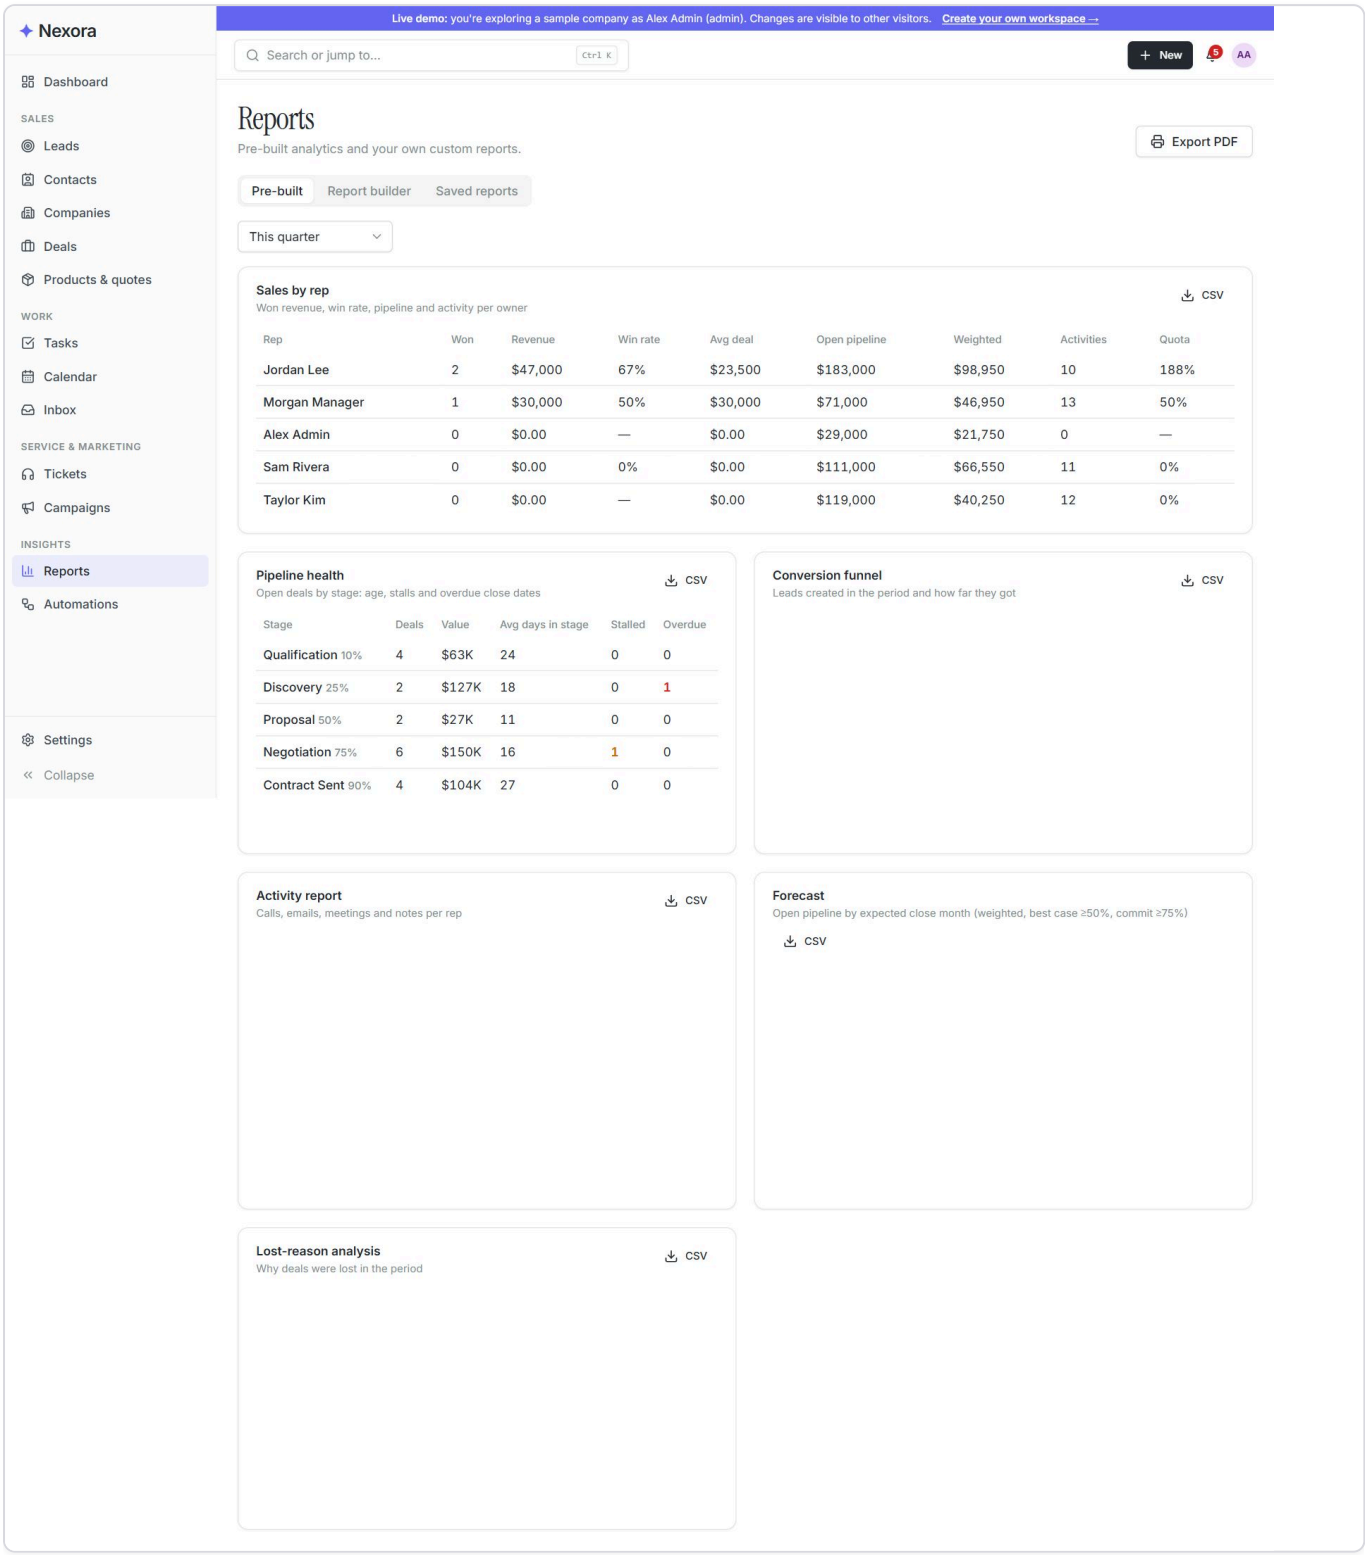

Click a campaign’s name to see its leads, best scores first.

CHAPTER 21

Reports

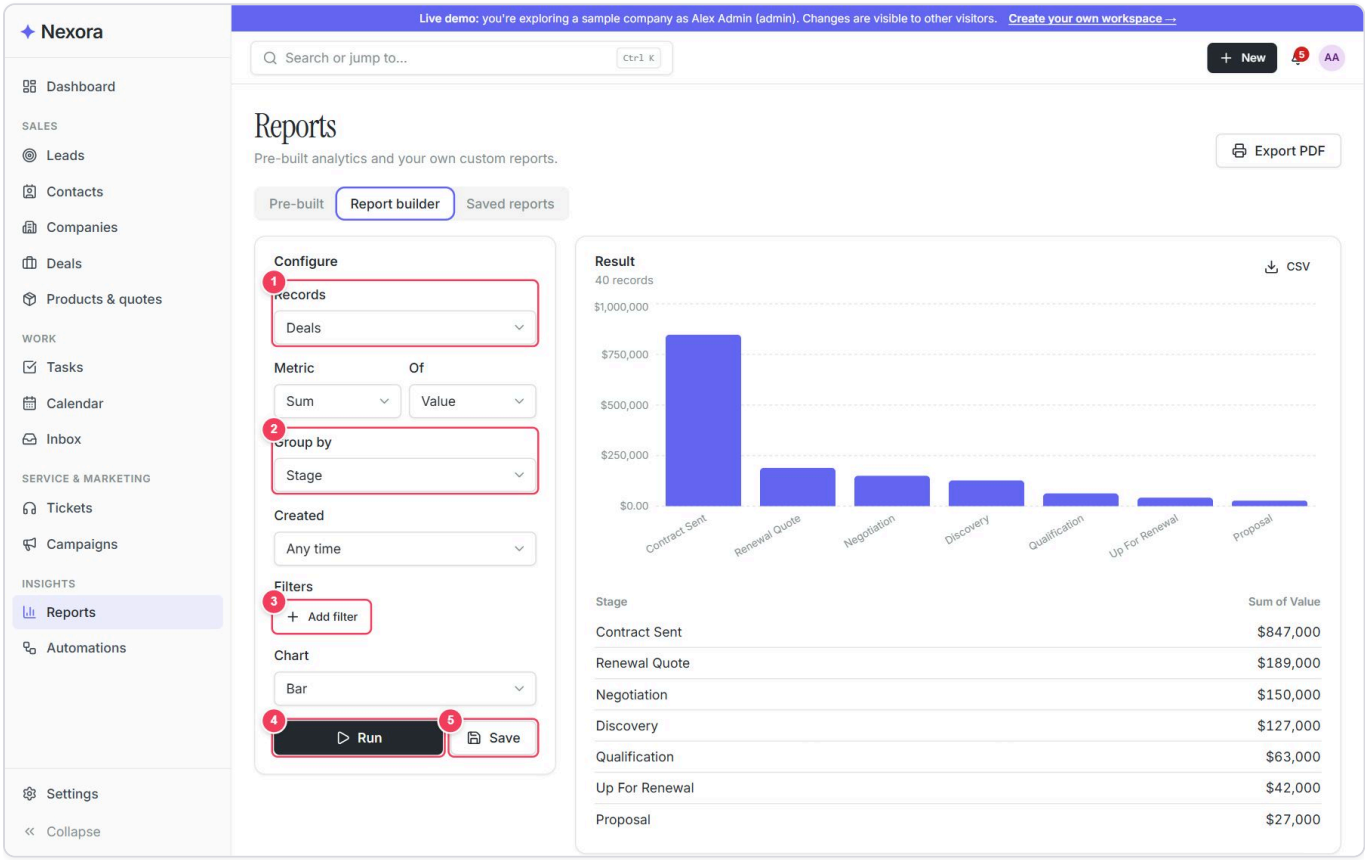

Six ready-made reports, plus a builder to answer your own questions. No spreadsheets needed.

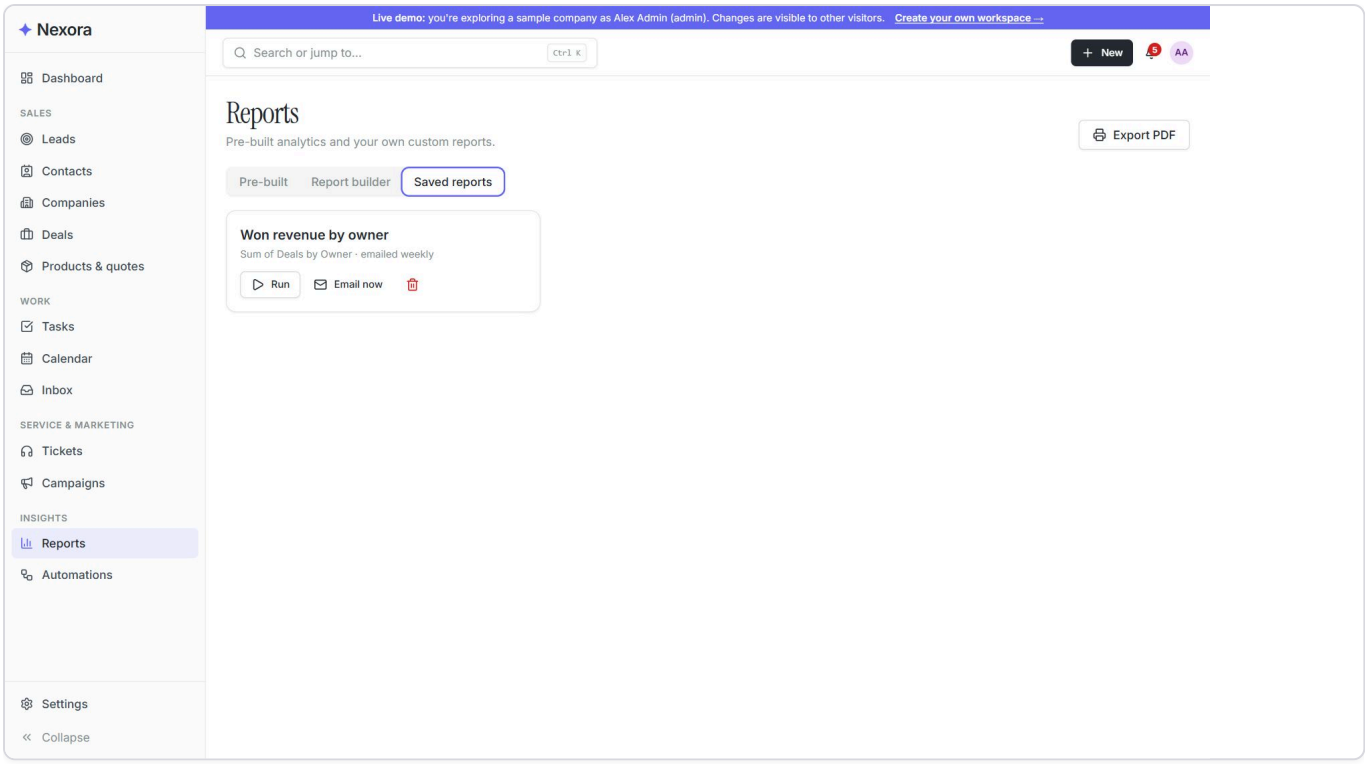

Report	Answers the question…
Sales by rep	Who is winning, how much, at what win rate, and against quota?
Pipeline health	Where are deals piling up, getting old or slipping past their dates?
Conversion funnel	How many leads got contacted, qualified, converted and won?
Activity report	How many calls, emails, meetings and notes did each person log?
Forecast	How much will probably close each month (weighted, commit, best case)?
Lost-reason analysis	Why are we losing deals?

Pick the date range at the top. Each report has a **CSV** button; **Export PDF** (top right) prints the whole page.

Build your own report

1. **Records**: what to count: deals, leads, contacts, companies, activities, tasks or tickets. Then choose the **Metric**: count, sum or average.
2. **Group by**: how to split the result (by stage, owner, source, month…).
3. **Add filter**: e.g. *status equals won*.
4. **Run**: shows a chart and a table.
5. **Save** (managers): keep it, and optionally email it daily, weekly or monthly.

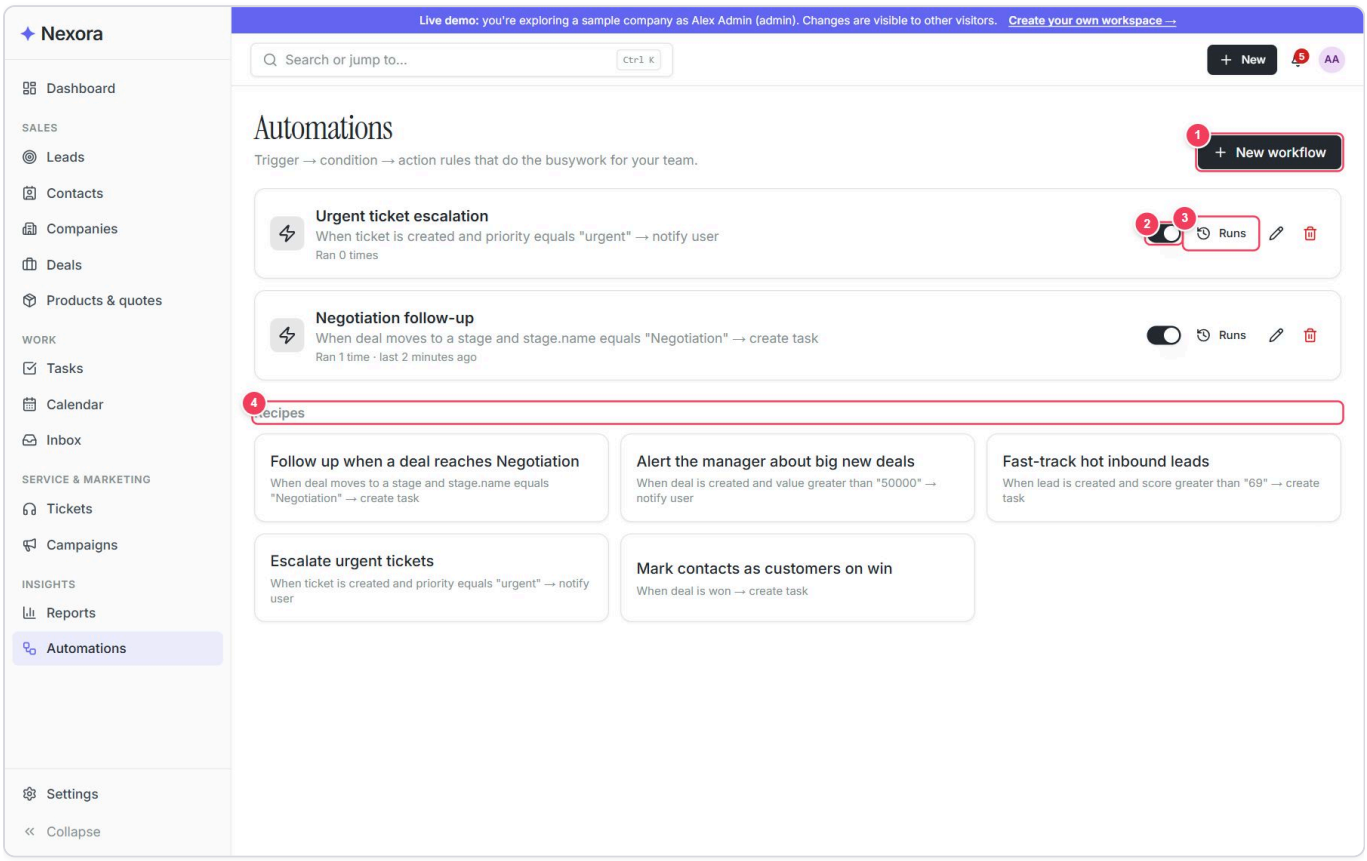

Saved reports: Run, Email now or delete.

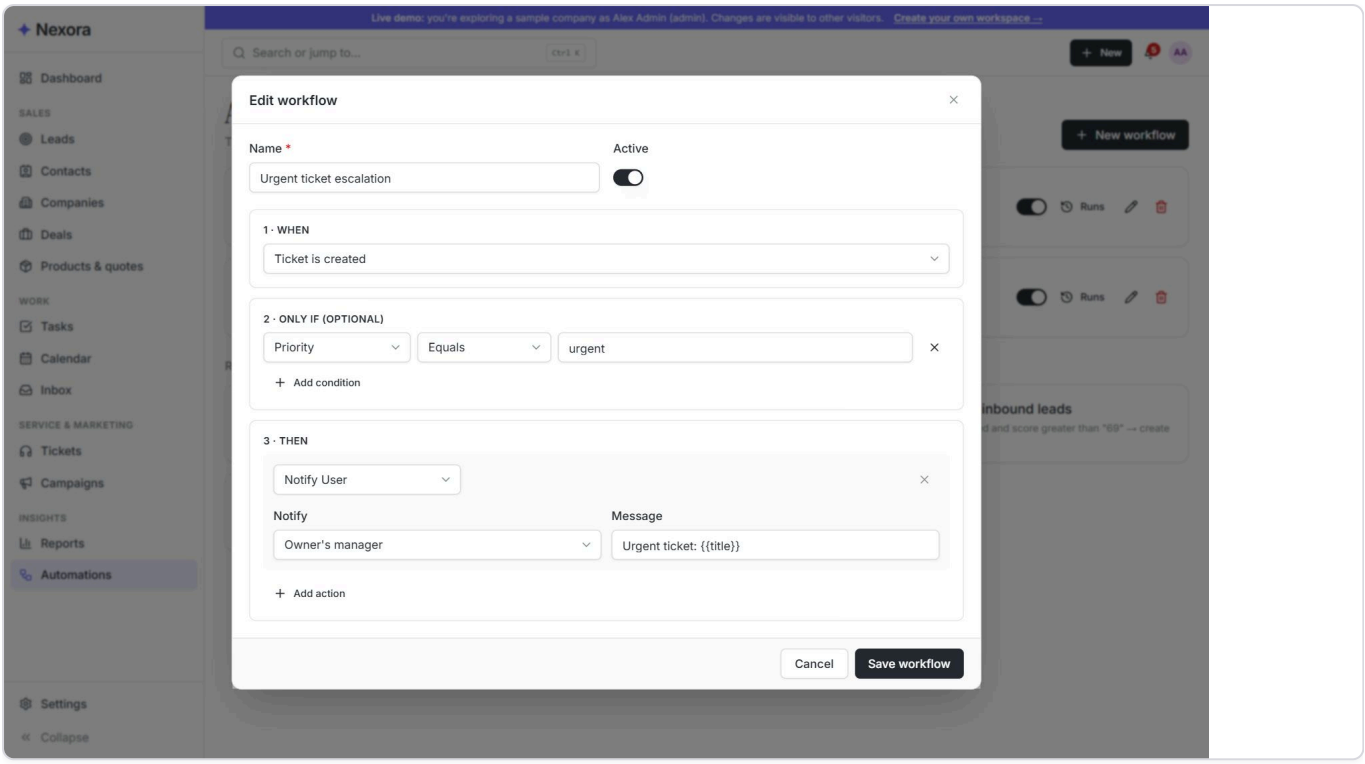

CHAPTER 22

Automations

Rules that work for you: **when** something happens, **if** conditions are true, **then** do something. For example, “when a deal reaches Negotiation, create a ‘Send contract’ task for its owner”.

1. **New workflow**: build a rule from scratch (managers).
2. **On/off switch**: pause or resume a rule.
3. **Runs**: history of every time it ran and what happened.
4. **Recipes**: ready-made rules. Click one, check it, save.

1 · When (trigger)

A deal is created / moves to a stage / is won / is lost · A lead is created / converted · A contact is created · A ticket is created / changes status.

2 · Only if (optional)

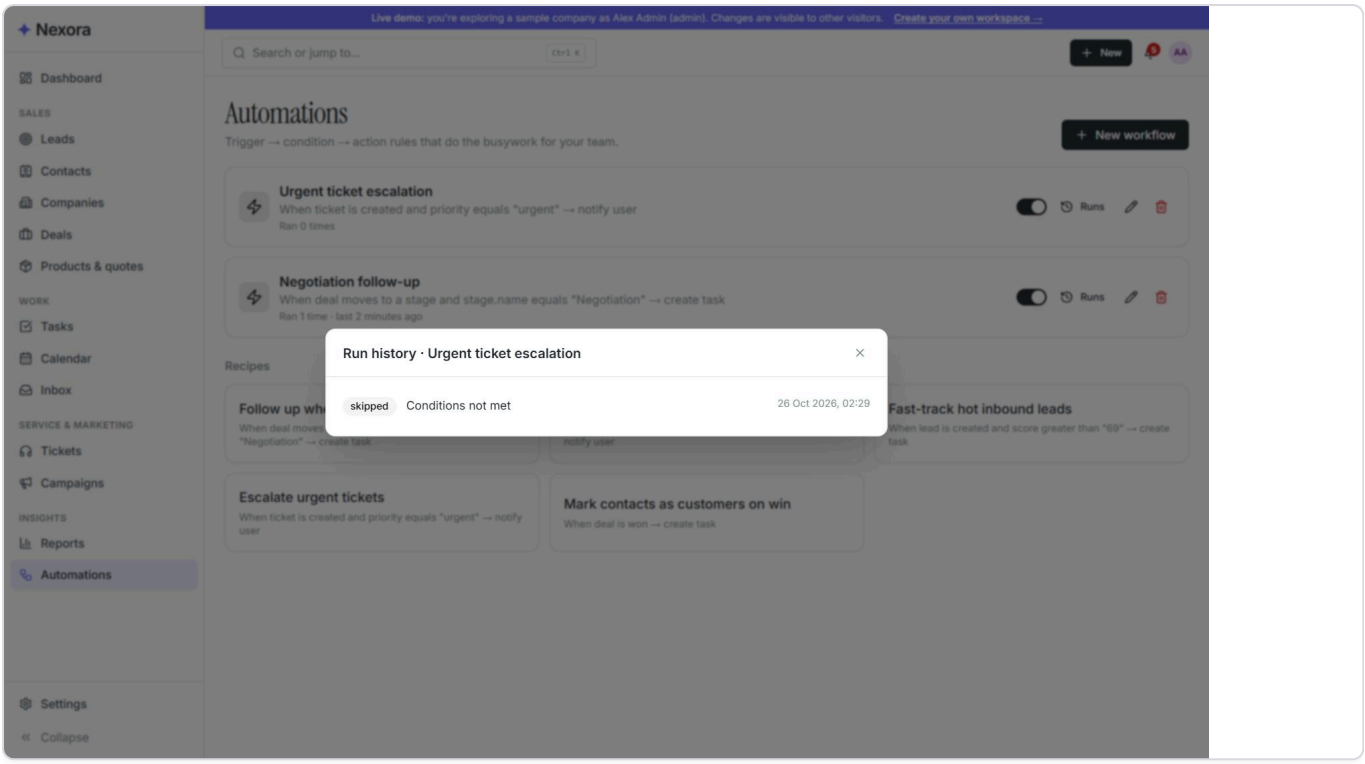

Field + operator (equals, not equals, greater than, less than, contains) + value. E.g. *Stage name equals Negotiation*, *Value greater than 50000*.

3 · Then (actions)

Create task (for the owner, their manager or anyone) · **Notify user** · **Assign owner** · **Update field** · **Send email** from a template.

Merge tags in actions

Task titles and messages can include `{{name}}`, `{{company_name}}`, `{{full_name}}`, `{{stage}}`…

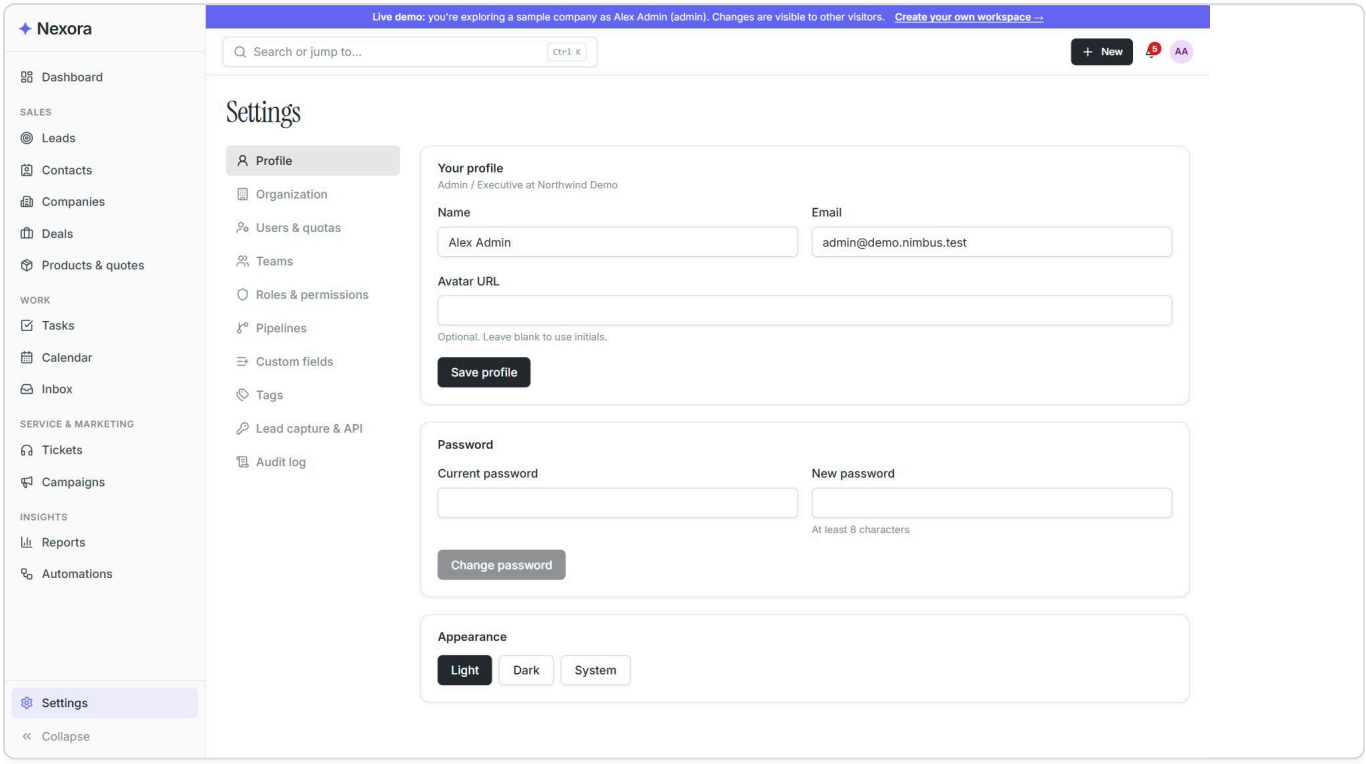

Run history: success, skipped (conditions not met) or failed, with a message.

CHAPTER 23

Settings (mostly for admins)

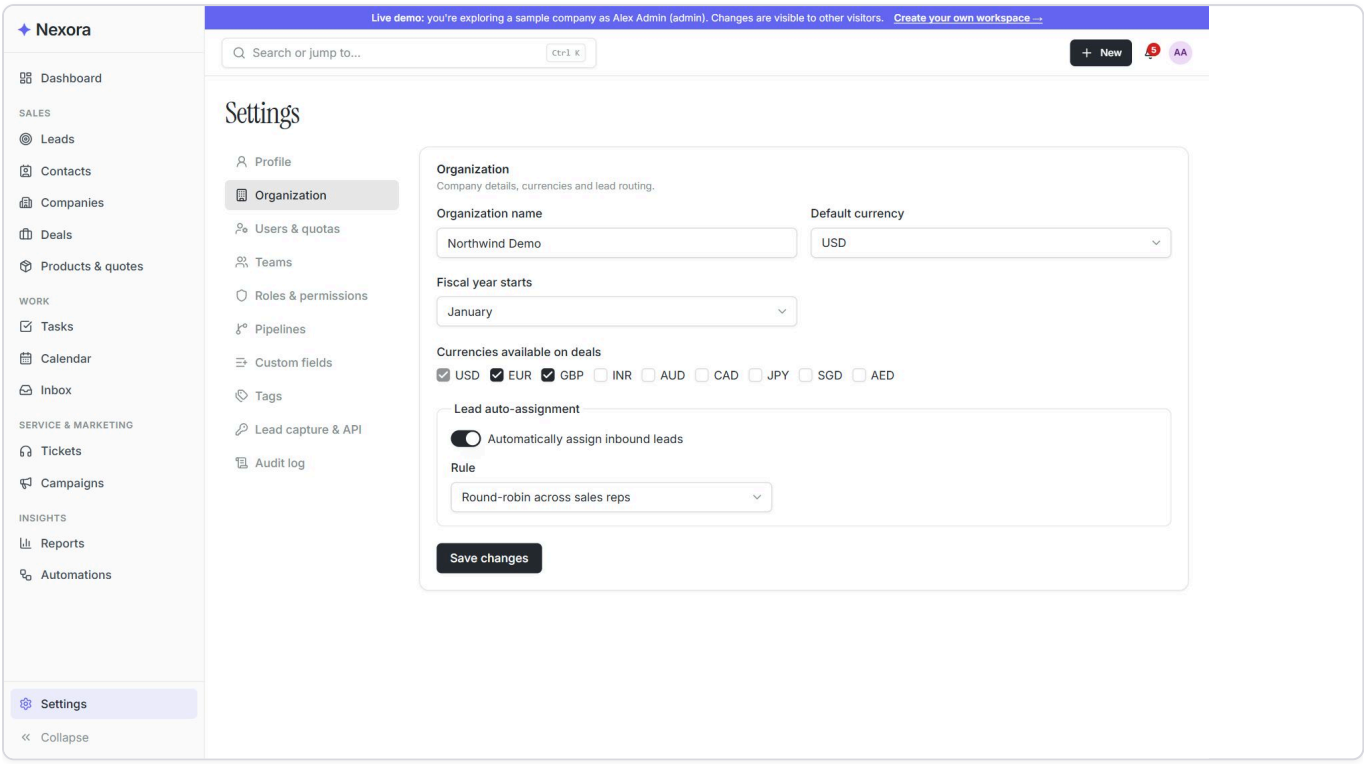

Open Settings from the bottom of the sidebar or your avatar menu. You only see the sections your role allows.

Profile (everyone)

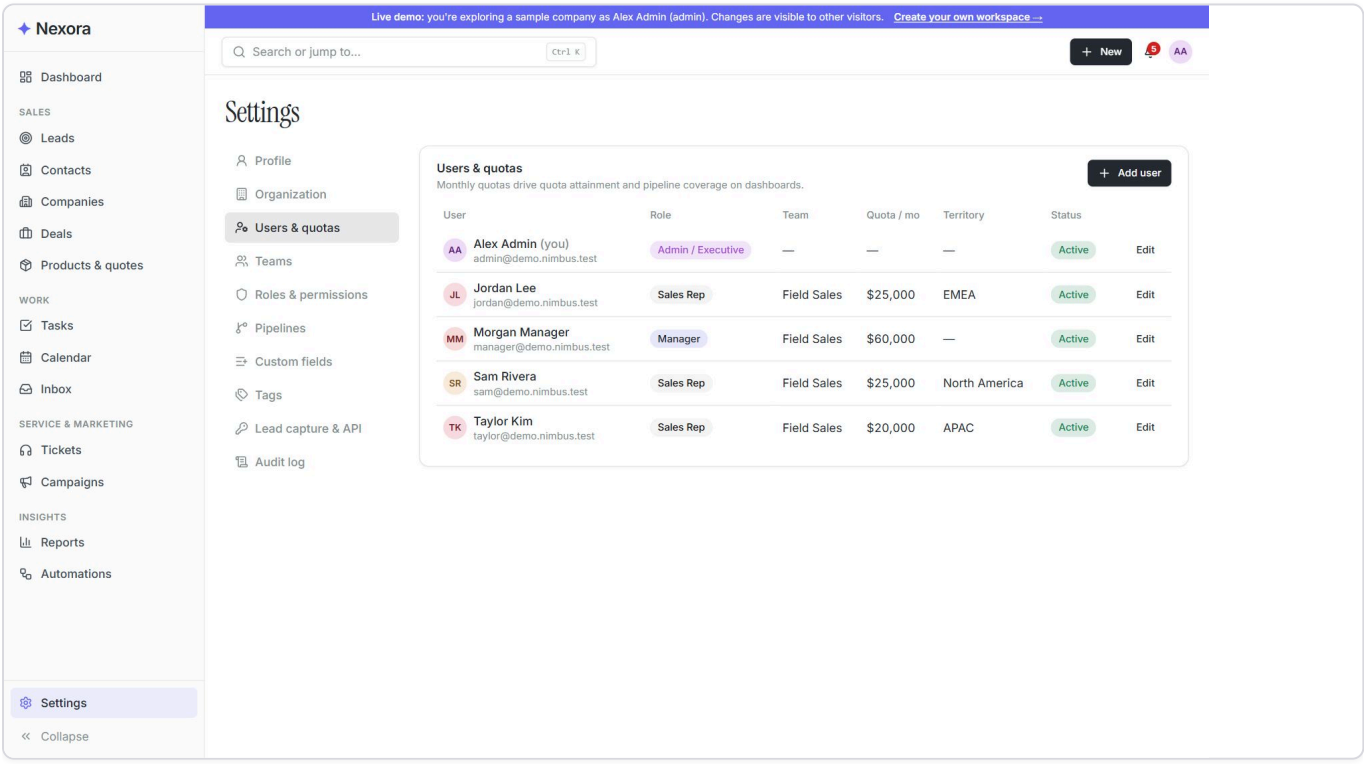

Change your name, email and avatar picture link, your password (this signs you out on other devices) and the theme.

Organization

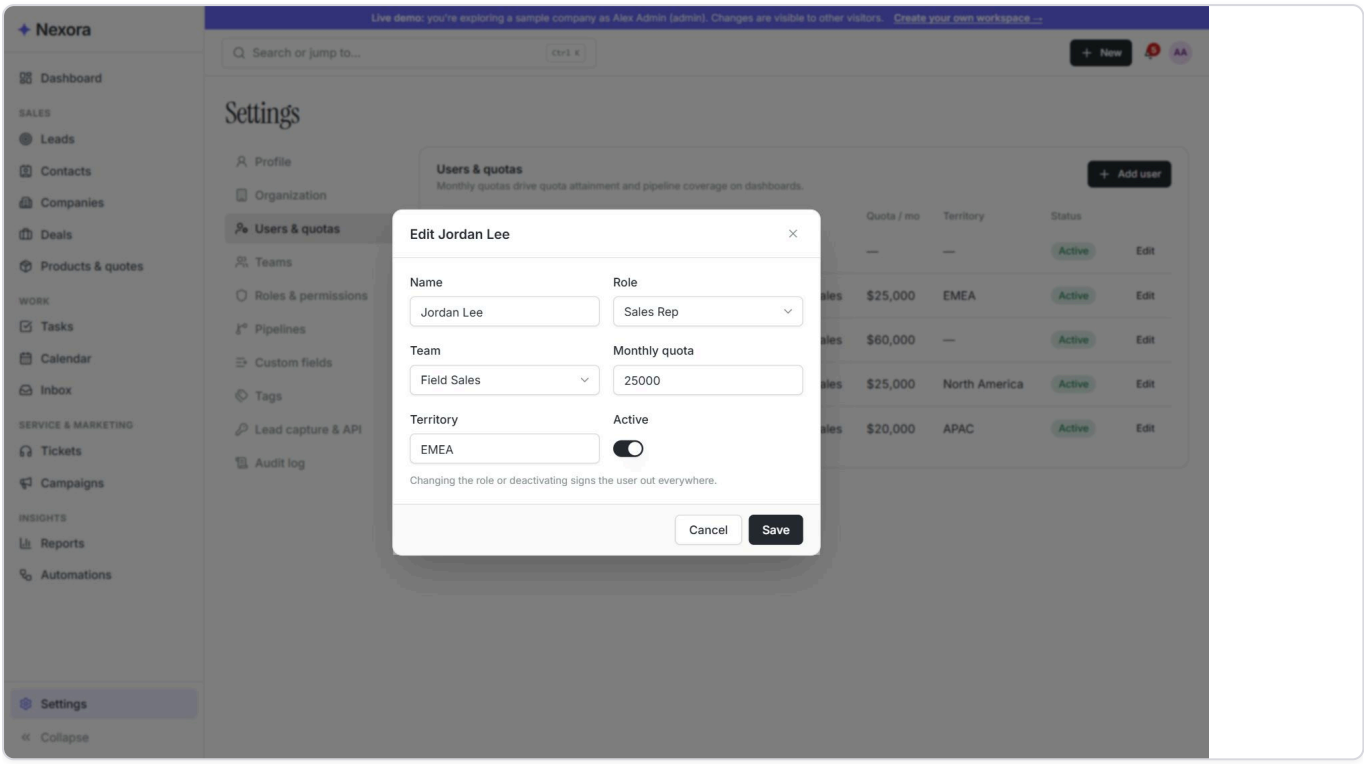

Company name, default currency, which currencies deals may use, the month your financial year starts, and how new web leads are assigned: **round-robin** (taking turns) or **by territory**.

Users & quotas

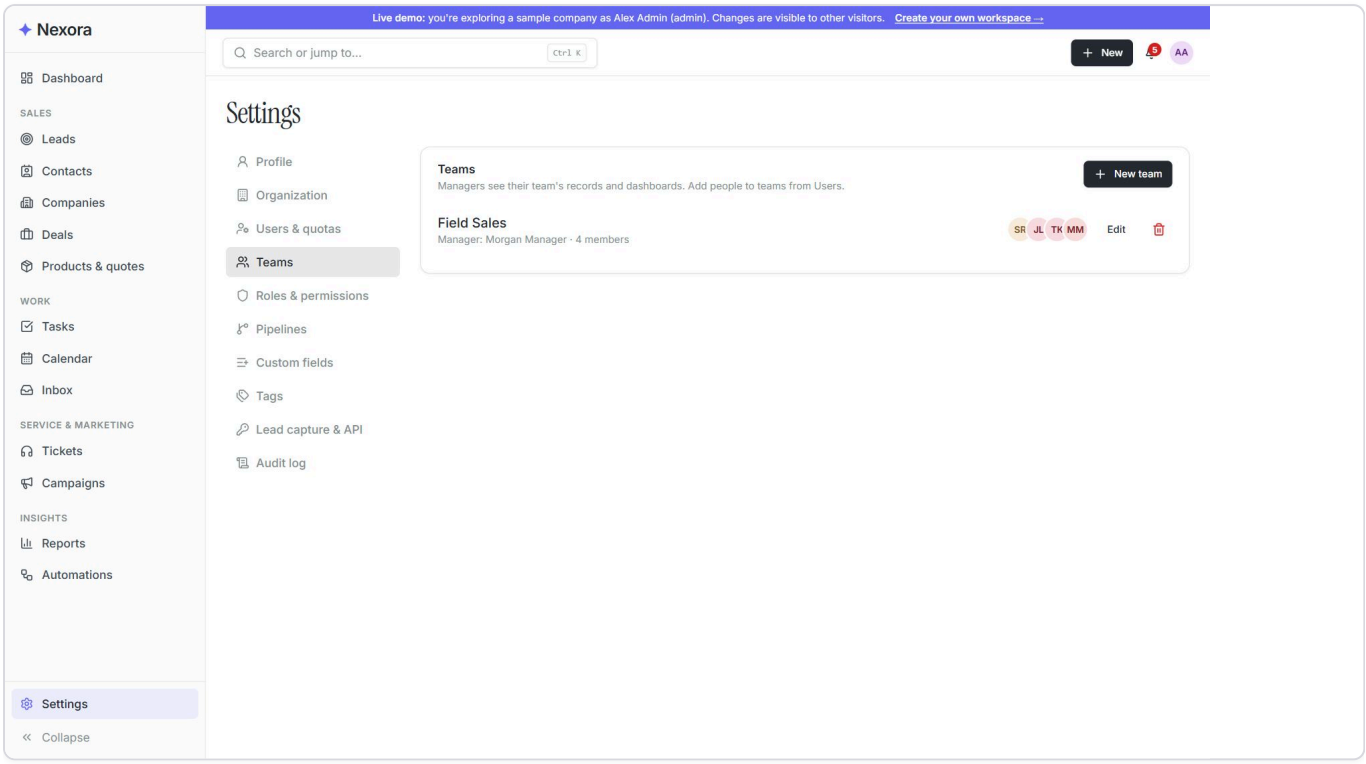

1. **Add user**: name, email, role, a temporary password, monthly quota and territory. Share the password with them securely.

2. **Edit** changes someone’s role, team, quota or territory, or deactivates them (they’re signed out immediately).

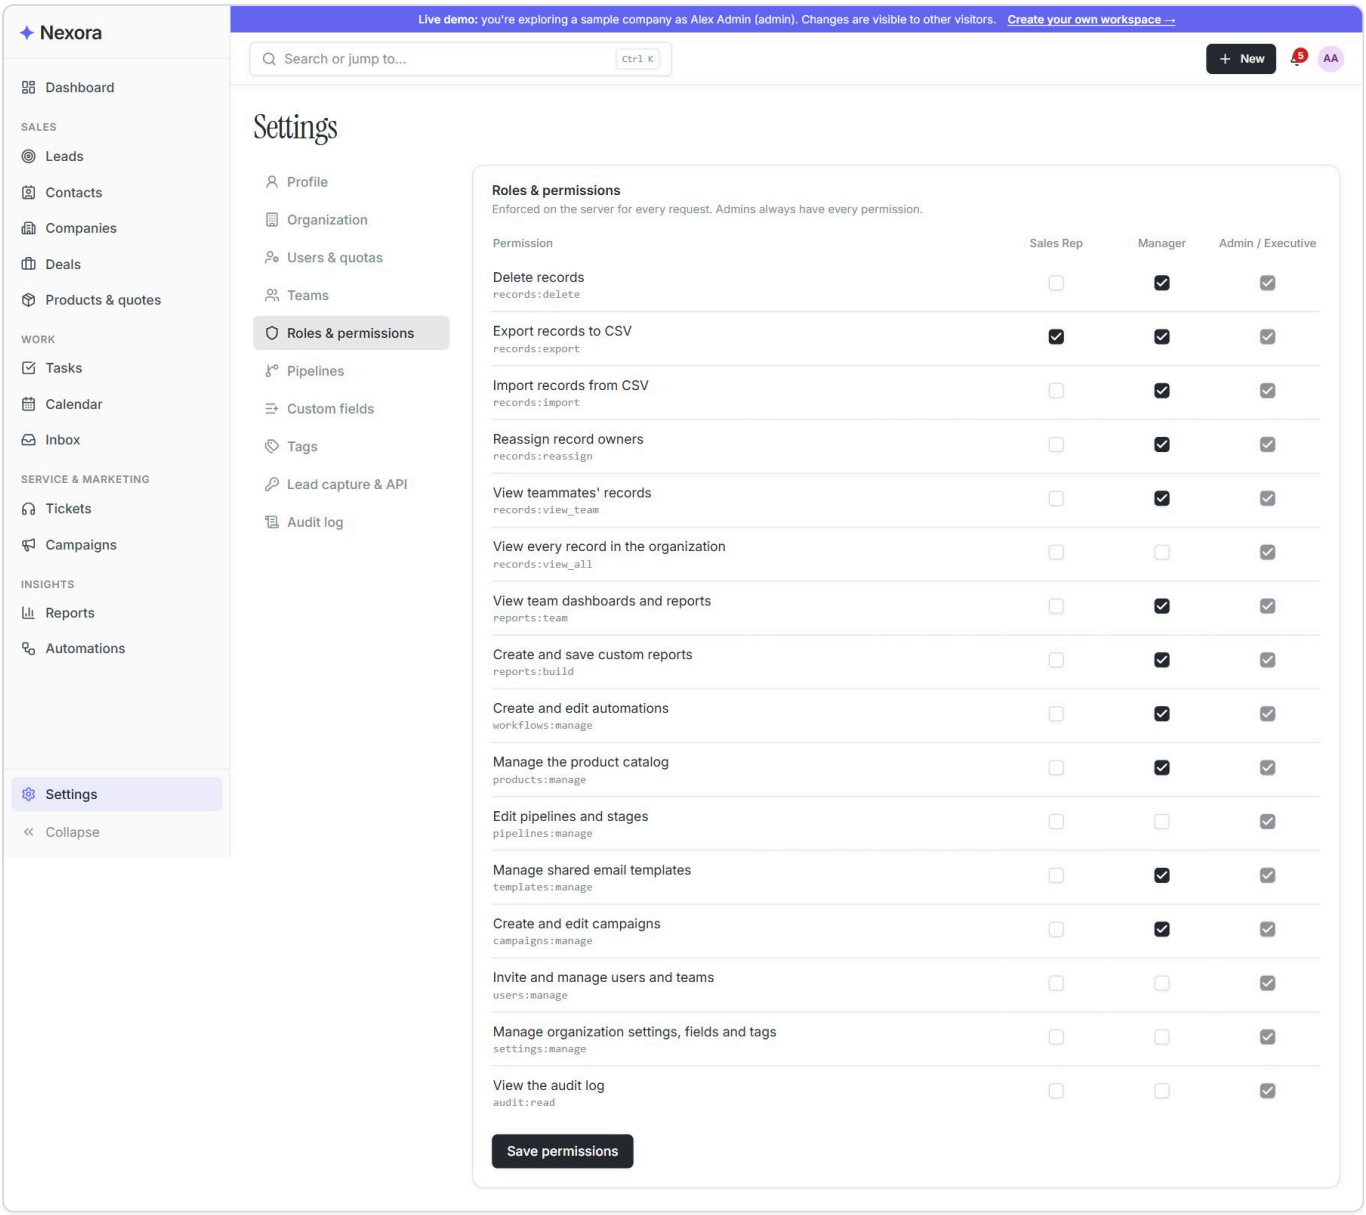

Teams

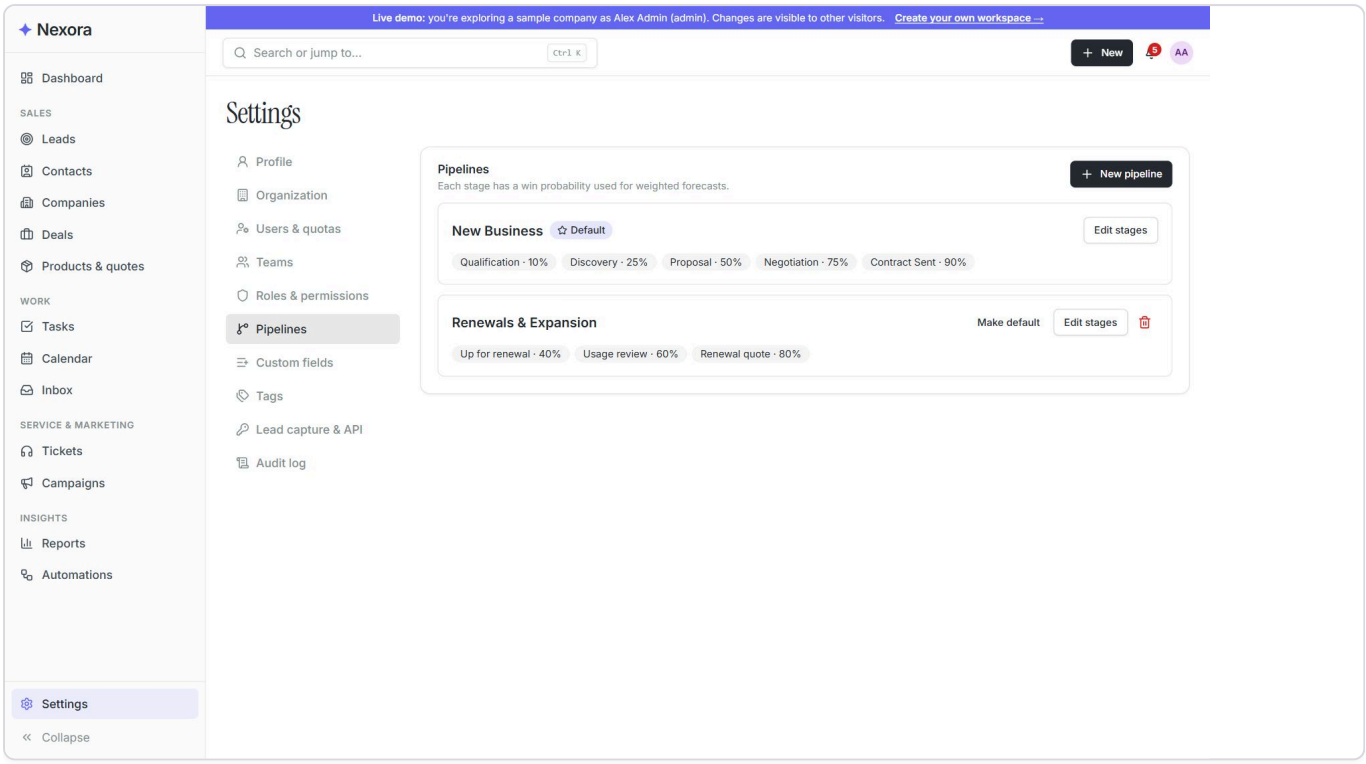

Create teams and pick a manager. Managers can see their team’s records, tasks and the Team dashboard. Put people into teams from Users & quotas.

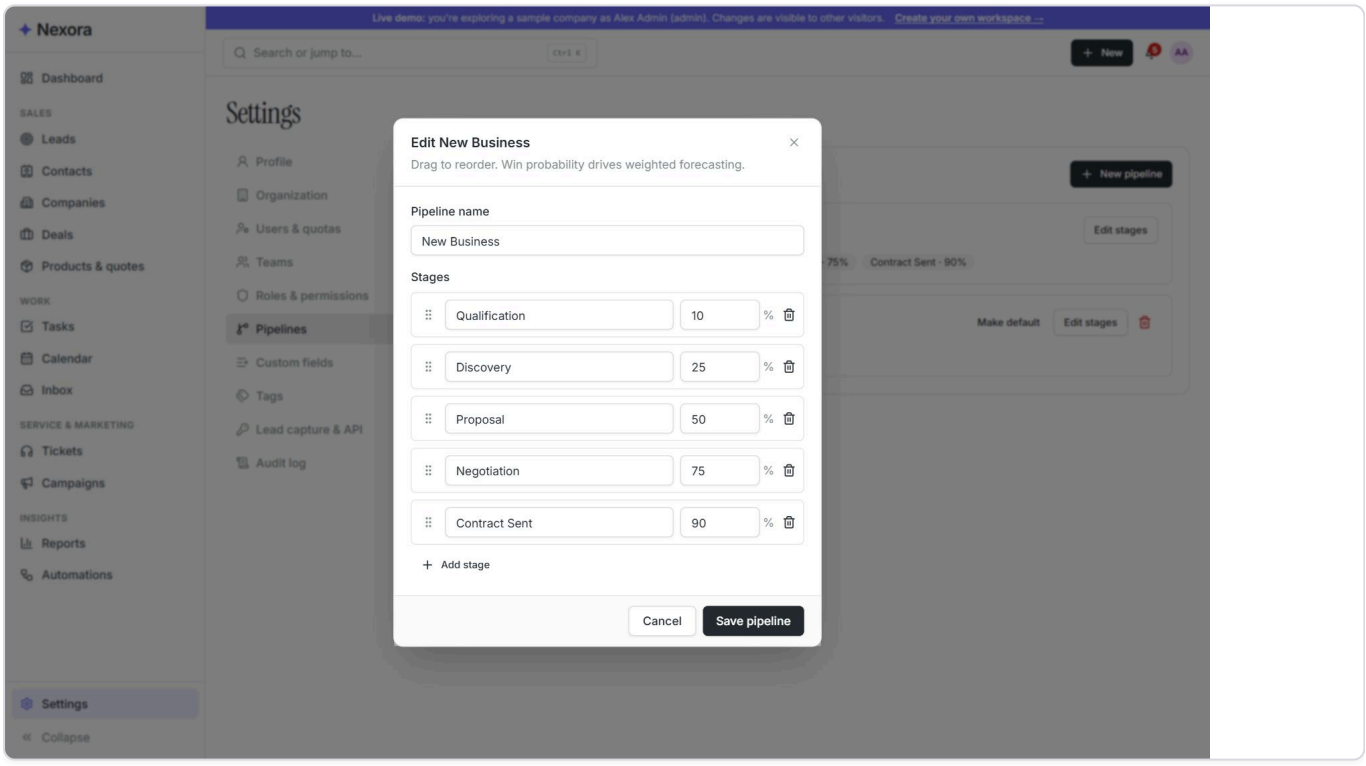

Roles & permissions

Tick or untick what Sales Reps and Managers may do. Admins always have everything. The rules are enforced by the server, so hidden buttons are not the only protection.

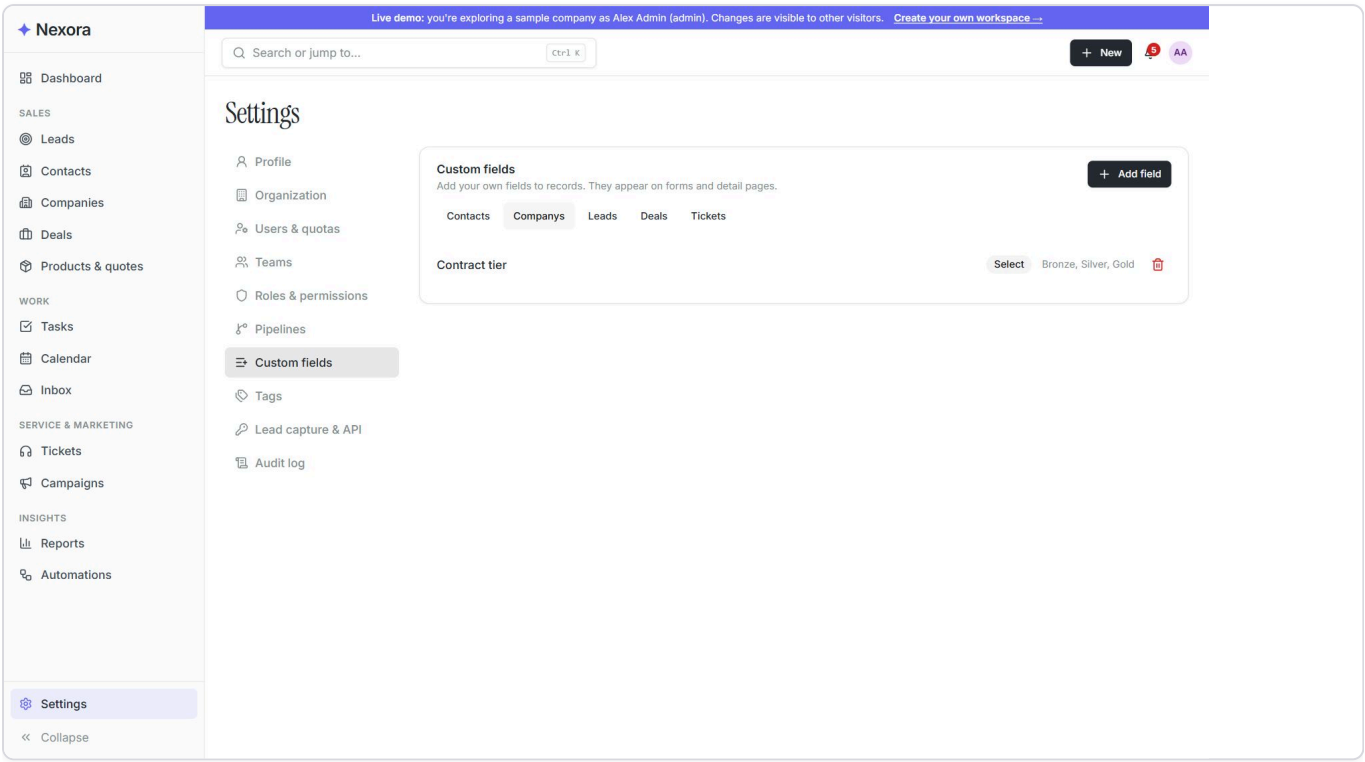

Pipelines

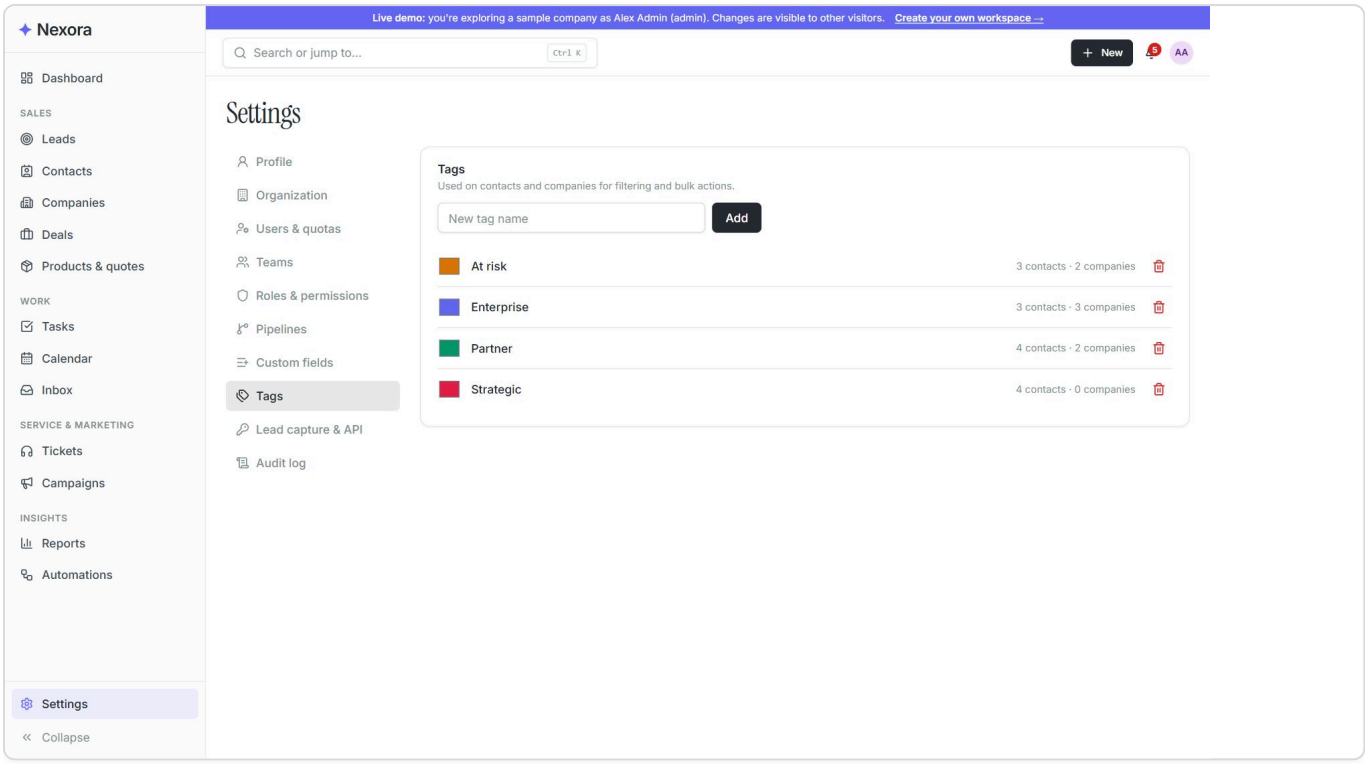

1. **New pipeline** or **Edit stages** on an existing one.
2. Drag the ⁝⁝ handle to reorder stages, rename them and set each stage's win %.
3. **Add stage** or remove one with the bin icon. A stage that still has deals can't be removed until they're moved.
4. **Make default** chooses which pipeline opens first.

Custom fields

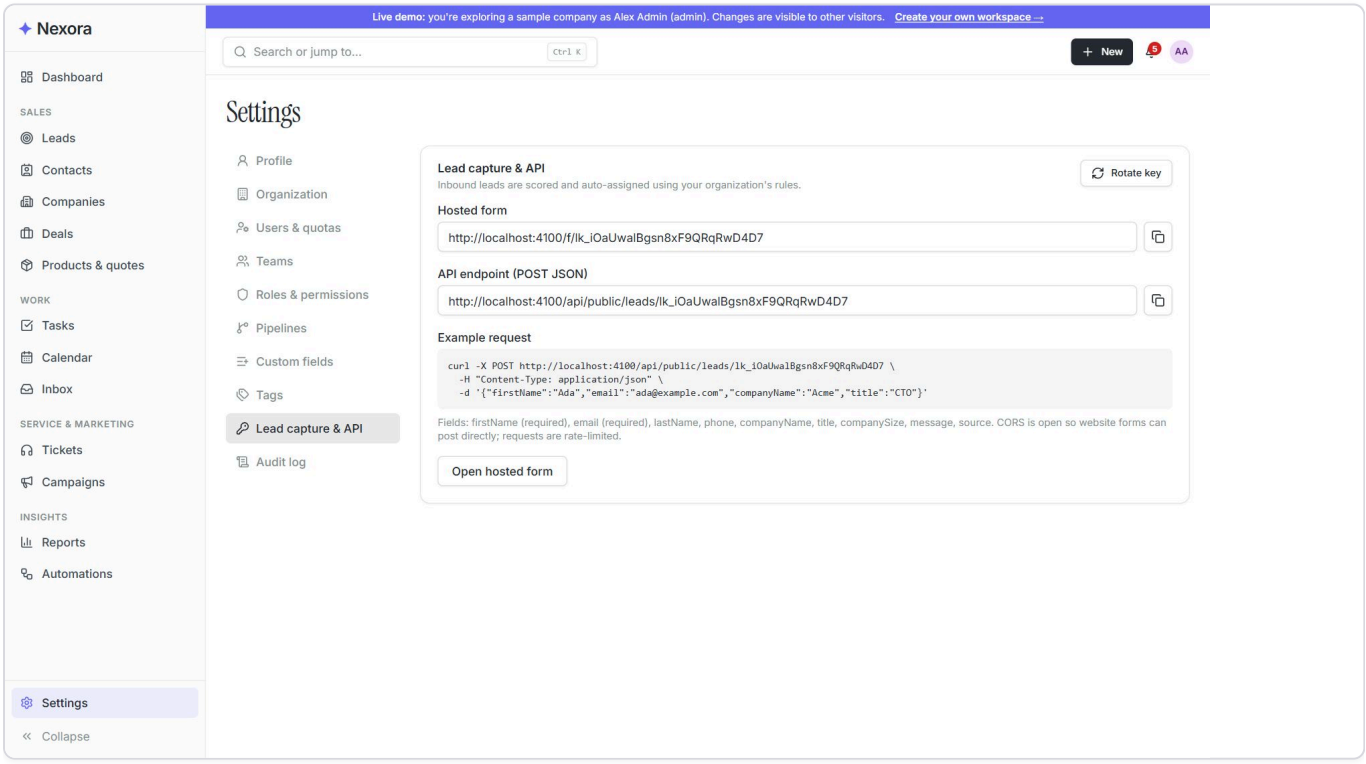

Add your own fields to contacts, companies, leads, deals or tickets: text, number, date, drop-down list or checkbox, optionally required. They appear on the forms and record pages automatically.

Tags

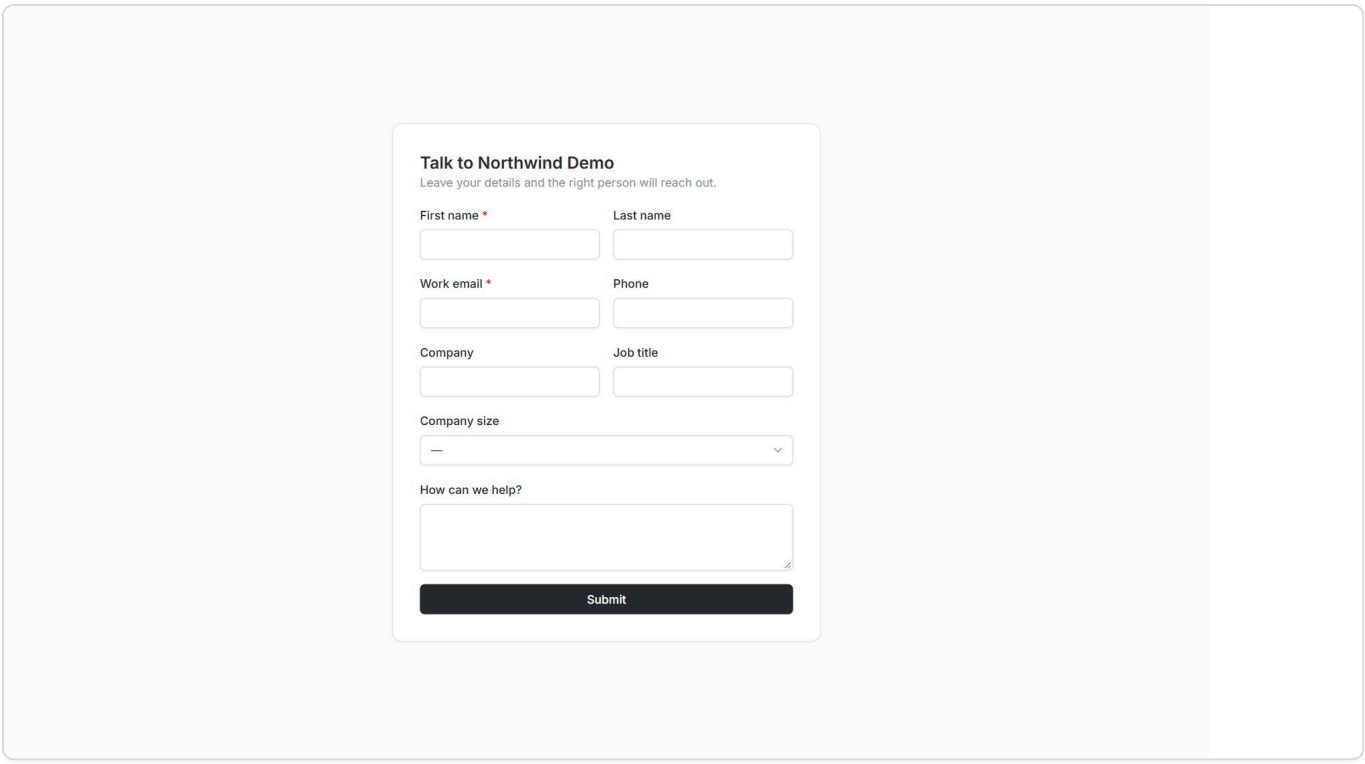

Create tags, change their colour, see how often each is used, and delete unused ones. Tags typed on a record are created automatically.

Lead capture & API

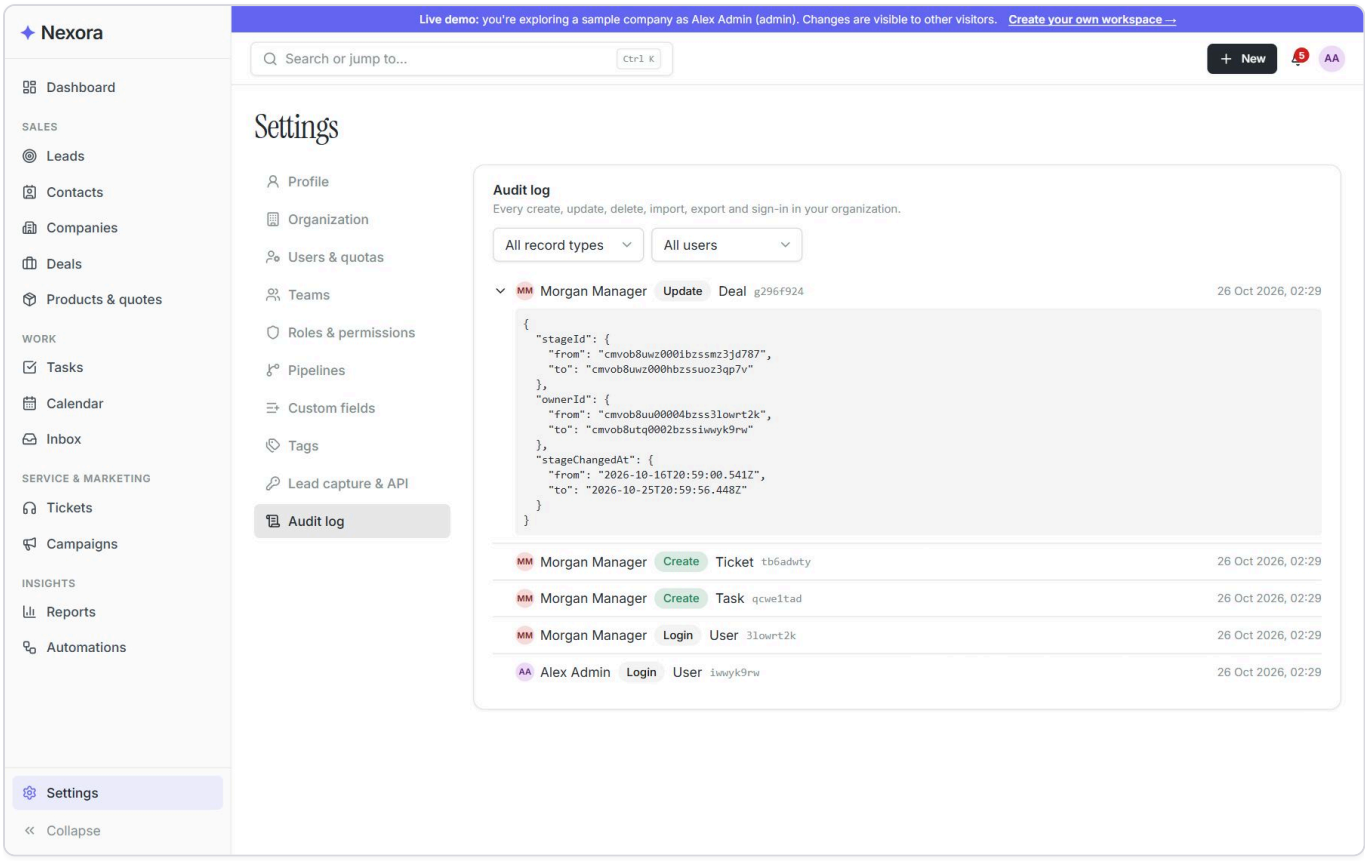

Your **hosted form** link (share it or put it on your website), the **API endpoint** for developers, and an example request. **Rotate key** creates a new link and disables the old one.

What visitors see on your hosted form. Submissions become scored, auto-assigned leads.

Audit log

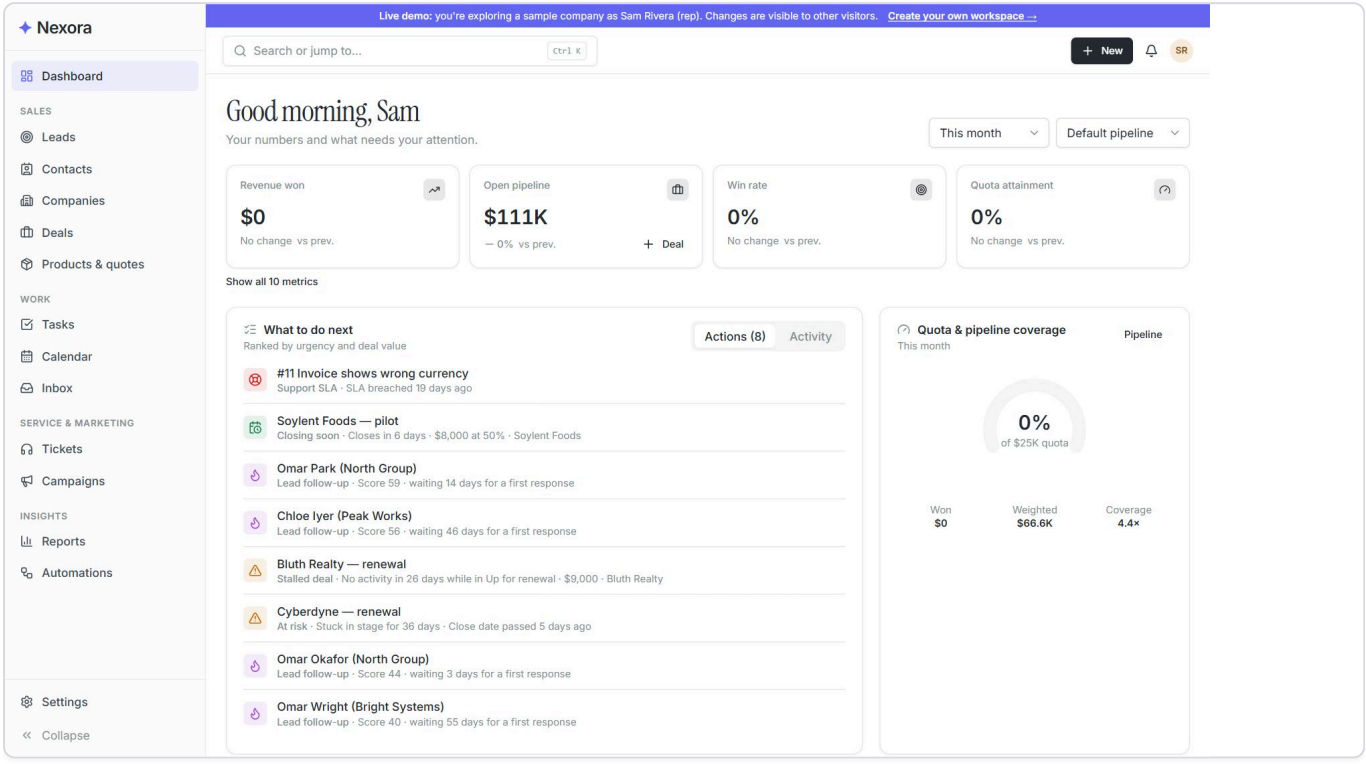

A permanent record of who did what and when: every create, update, delete, merge, import, export, sign-in and settings change. Filter by record type or person, and click the arrow on an entry to see exactly which fields changed, from what to what.

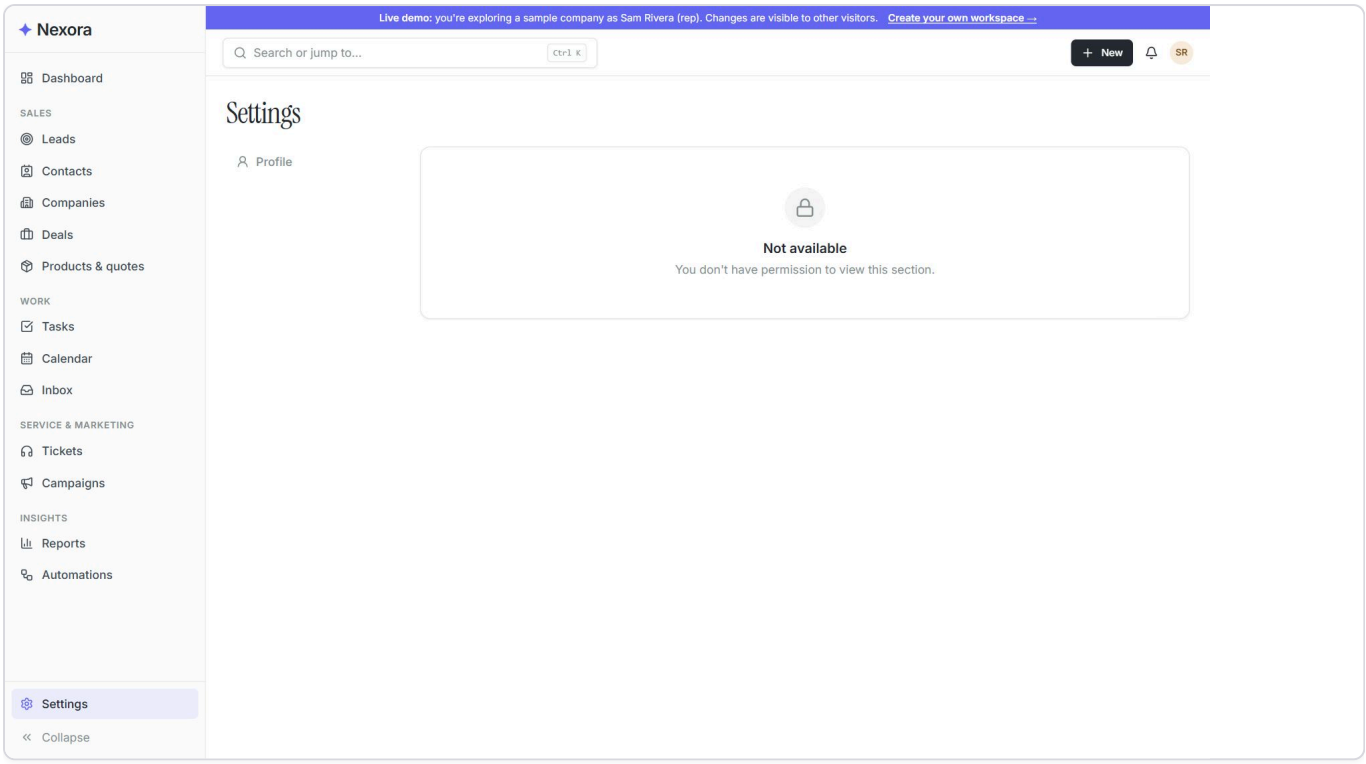

CHAPTER 24

Roles: what each person can do

Role	Sees	Typical person
Sales Rep	Only their own records	Salespeople, support agents
Manager	Their team's records plus unassigned ones	Team leads
Admin / Executive	Everything in the company	Owners, executives, ops

A sales rep's dashboard: only "My dashboard", only their own numbers.

Sections you can't use say "Not available" instead of showing other people's data.

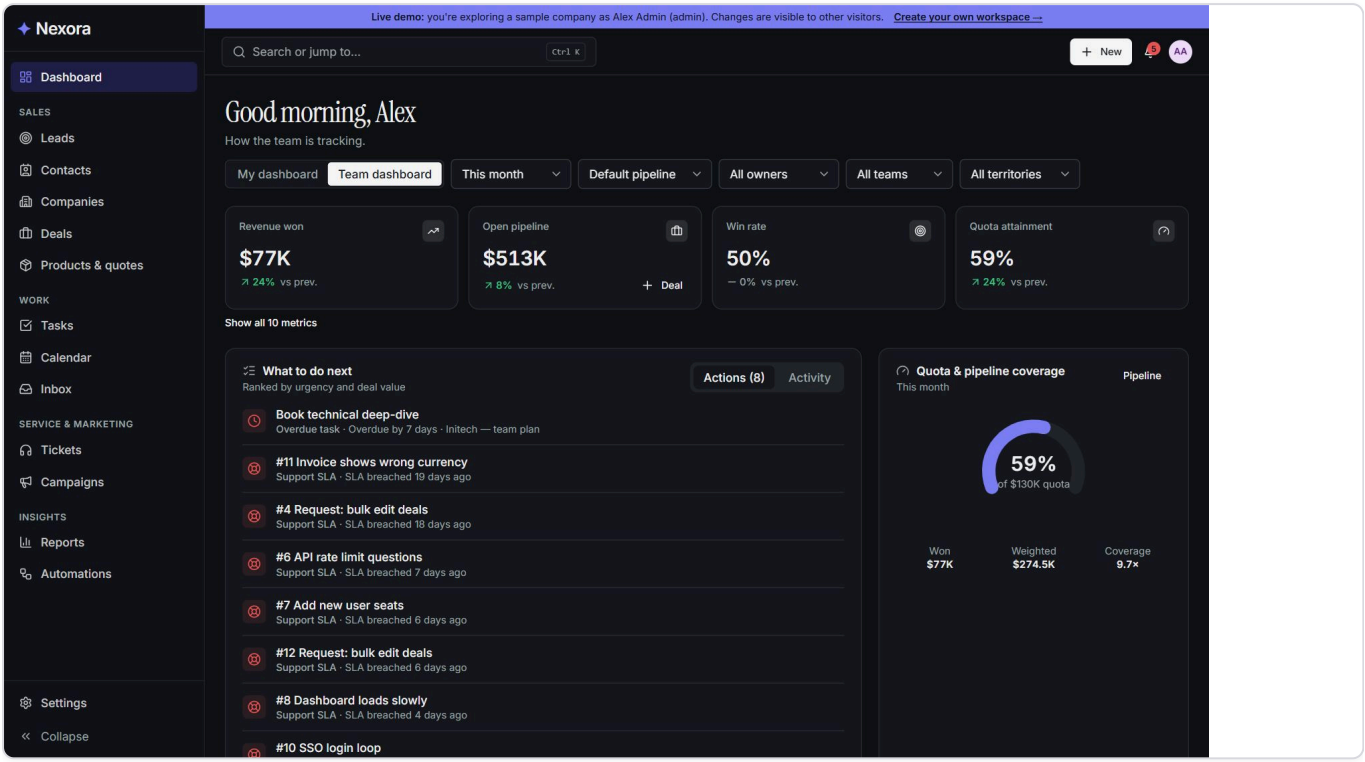

Default permissions

Permission	Rep	Manager	Admin
Export to CSV	✓	✓	✓
Delete records · Import CSV · Reassign to others	—	✓	✓
See teammates' records · Team dashboards & reports	—	✓	✓
Save custom reports · Automations · Products · Shared templates · Campaigns	—	✓	✓
See every record in the company	—	—	✓
Pipelines · Users & teams · Organization settings, fields, tags · Audit log	—	—	✓

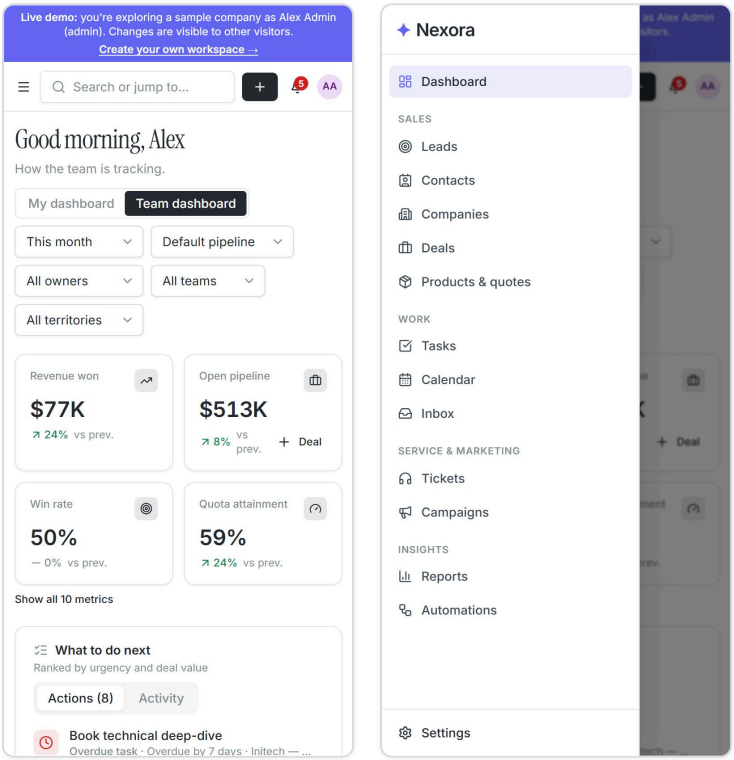

Everyone can create and edit the records they can see, log activities, manage their own tasks, send email and make personal templates. Admins can change these defaults (chapter 23).

CHAPTER 25

Dark mode, phones and tablets

Dark mode: avatar menu → Dark (or System to follow your computer).

On a phone, the menu hides behind the ☰ button at the top left. Everything else works the same; tables scroll sideways inside their card.

Heads up

Dragging deal cards needs a mouse or long-press-and-drag. On phones it's often easier to open the deal and tap a stage on its stage path.

CHAPTER 26

A full day in Nexora

Putting it all together, from first lead to happy customer.

Morning

1. Open the **Dashboard**. Work down **What to do next**: overdue tasks, urgent tickets, deals closing this week.
2. Check the **bell** for new leads assigned to you overnight.

Working a new lead

1. Open the lead (🔥 hot ones first). Read its score breakdown and AI suggestion.
2. Call them, then **Log call**: outcome, notes. The lead becomes *Contacted*.
3. If there's a real opportunity, click **Convert** with *Also create a deal*, and set the value and close date.

Moving a deal forward

1. On the **Deals** board, drag the deal to **Discovery** after your first proper meeting.
2. In the deal's **Quotes** tab, build a quote from your products; open **PDF** and send it. Drag the deal to **Proposal**.
3. Use **Email** with a template to follow up. Add a **Task** "Check in on Friday".
4. When they negotiate, drag to **Negotiation**. An automation can create your "Send contract" task.
5. They sign: **Mark accepted** on the quote, then **Won** 🎉. The contact becomes a Customer and the dashboard updates.

After the sale

1. The customer has a problem: create a **Ticket** from their contact page and resolve it before the SLA turns red.
2. End of week: managers open **Reports** → **Sales by rep** and **Pipeline health**, and the **Team dashboard** for quota coverage.

CHAPTER 27

Troubleshooting and FAQ

Problem	What to do
“Account and user settings are read-only in the live demo”	You’re in the shared demo company. Create your own workspace to change your profile, password and users.
“You don’t have permission to do that”	Your role doesn’t include that action. Ask an admin (chapter 24).
I can’t find a record a colleague mentioned	Reps only see their own records. Ask the owner or a manager to reassign it to you.
“Can’t reach the server right now”	The server is restarting or offline. Click **Try again** after a moment.
My numbers are all zero	Check the date range and My/Team toggle. A new account starts empty.
The quota gauge says “No quota set”	An admin needs to set monthly quotas in Settings → Users & quotas.
My email wasn’t received	Email delivery isn’t connected yet; the email is saved in Nexora only. Ask your admin.
Can’t delete a stage or pipeline	Move its deals to another stage first.
A deal shows “At risk”	Hover the flag to see why, then fix the cause (log activity, set a close date, move the stage).
Import skipped some rows	The import result lists each row and why (e.g. bad email). Fix the file and import just those rows again.

Keyboard shortcuts

Keys	Does
`Ctrl` / ⌘ + `K`	Search and quick actions
`↑` `↓` then `Enter`	Choose a search result
`Esc`	Close a window, menu or search
`Enter` or `,` in a Tags box	Add the tag (`Backspace` removes the last one)

Last rookie tip

Three habits make a CRM useful: **log every conversation**, **always have a next task** on every open deal, and **keep close dates honest**. Everything else (dashboards, forecasts, AI hints) gets better automatically.
